Preface

FCC Statement
(Federal Communications Commission)
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Re orient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the service representative or an experienced radio/TV technician for help.

Warning
Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS
Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit (DC Output 20V, 9A minimum).

CAUTION
Always disconnect all telephone lines from the wall outlet before servicing or disassembling this equipment.

TO REDUCE THE RISK OF FIRE, USE ONLY NO. 26 AWG OR LARGER, TELECOMMUNICATION LINE CORD

This Computer’s Optical Device is a Class I Laser Product
Instructions for Care and Operation
The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don't drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

   ![Diagram of computer being dropped](image)

   ![Diagram of computer being placed on an unstable surface](image)

   ![Diagram of computer being placed on anything heavy](image)

2. **Keep it dry, and don't overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

   ![Diagram of computer being exposed to excessive heat or direct sunlight](image)

   ![Diagram of computer being left in a place where foreign matter or moisture may affect the system](image)

   ![Diagram of computer being stored in a humid environment](image)

   ![Diagram of computer being placed on any surface that will block the vents](image)
3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

<table>
<thead>
<tr>
<th>Do not turn off the power until you properly shut down all programs.</th>
<th>Do not turn off any peripheral devices when the computer is on.</th>
<th>Do not disassemble the computer by yourself.</th>
<th>Perform routine maintenance on your computer.</th>
</tr>
</thead>
</table>

5. **Take care when using peripheral devices.**

| Use only approved brands of peripherals. | Unplug the power cord before attaching peripheral devices. |
Power Safety
The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC adapter or car adapter).

Do not plug in the power cord if you are wet.  Do not use the power cord if it is broken.  Do not place heavy objects on the power cord.
Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not remove any batteries from the computer while it is powered on.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer's instructions.
Preface

Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Servicing
Do not attempt to service the computer yourself. Doing so may violate your warranty and expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

- When the power cord or AC/DC adapter is damaged or frayed.
- If the computer has been exposed to rain or other liquids.
- If the computer does not work normally when you follow the operating instructions.
- If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
- If there is an unusual odor, heat or smoke coming from your computer.

Removal Warning
When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before turning the computer on.
Travel Considerations

Packing
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it's latched.
4. Disconnect the AC adapter and cables. Stow them in the carrying bag.
5. The AC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the vents/fan intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the vent/fan intake while the computer is in use.
Preface

On the Road

In addition to the general safety and maintenance suggestions in this preface, and “Troubleshooting” on page 8 - 1, keep these points in mind:

Hand-carry the notebook - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

Beware of Electromagnetic fields - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). Note: Some airports also scan luggage with these devices.

Fly safely - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

Get power where you can - If an electrical outlet is available, use the AC adapter and keep your battery(ies) charged.

Keep it dry - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

Remember to:
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Preface

Lighting
Proper lighting and comfortable display viewing angle can reduce eye strain and muscle fatigue in your neck and shoulders.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- **Chapter 2**  The Storage Devices (hard disk, optical device options, 3-in-1 Card Reader, PC Card), Mail Program, Mouse, Audio & Printer.
- **Chapter 3**  The computer’s power saving options.
- **Chapter 4**  The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
- **Chapter 5**  An outline of the computer’s built-in software, or BIOS (Basic Input Output System).
- **Chapter 6**  Instructions for upgrading your computer.
- **Chapter 7**  A quick guide to the computer’s TV Tuner, wireless, Bluetooth, and camera modules (some of which may be optional depending on your purchase configuration).
- **Chapter 8**  A troubleshooting guide.
- **Appendix A**  A definition of the interface, ports/jacks which allow your computer communicate with external devices.
- **Appendix B**  Information on the NVIDIA Video driver controls.
- **Appendix C**  Information on the ATI Video driver controls.
- **Appendix D**  A guide to the computer’s 1.8” LCD.
- **Appendix E**  The computer’s specification.
Quick Start Guide

Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1, “BIOS Utilities” on page 5 - 1 and “Upgrading The Computer” on page 6 - 1 in the User’s Manual. You may also find the notes marked with a of interest to you.

Beginners and Not-So-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in this Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the \(\text{\textregistered}\) symbol. Also please note the safety and handling instructions as indicated in the Preface.

Not Included
Operating Systems (e.g. Windows XP etc.) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.
System Software
Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find this manual refers to the following operating systems:

- Microsoft Windows XP (Home & Professional Editions)

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in “Drivers & Utilities” on page 4 - 1. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed in Table 4 - 1, on page 4 - 6. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn't been properly configured (your service representative may have already done that for you), refer to “What to Install” on page 4 - 1 for installation instructions.
Quick Start Guide

System Startup

1. Remove all packing materials.
2. Place the computer on a stable surface.
3. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
4. Attach the AC adapter to the DC-In jack on the right of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC adapter.
5. Move and hold the LCD latches outwards, and release the top cover.
6. Raise the lid/LCD to a comfortable viewing angle, and press the power button to turn the computer “on”.
7. Adjust the LCD panel to a comfortable viewing angle.

Shutdown

Please note that you should always shut your computer down by choosing the Shut Down/Turn Off Computer command from the Start menu in Windows. This will help prevent hard disk or system problems.

Figure 1 - 1 - Top Panel with LCD Closed & AC Adapter In

1. LCD Latches
2. 1.8” TFT LCD Screen (see “1.8” Top Case LCD” on page D - 1)
Getting to Know Your Computer

The graphics on the following pages will help you to become familiar with the basic functions, and to learn the location of the various ports and components of your computer.

Model Differences

This manual refers to the two notebook models pictured on this page.

The designs vary slightly in external design. Photographs used throughout this manual are of Model A (Model B features a wide screen).
Quick Start Guide

1.8" LCD

The 1.8" TFT Top Case LCD can be used to display company logos, personal photos, animated files etc. (see below). Details on how to program the logos and pictures for the 1.8" LCD are available in Appendix D on page D - 1.

1.8" LCD Power ON/OFF

Power to the 1.8" LCD may be toggled on/off by touching the metal rim which runs around the LCD. The 1.8" LCD will remain on even if the computer is shut down but still powered by the battery (and will thus draw power from the battery).

![Logo Format](image)

The 1.8" LCD supports the following logo formats:
- 24 bit depth Bitmap (.bmp) files 128 pixel wide * 160 pixel high
- 32 bit depth GIF or animated .GIF files 128 pixel wide * 160 pixel high

Screen Rotation

The picture displayed on the LCD will rotate and invert depending on whether the lid is closed or open (if the lid is open the picture will invert to display your picture or logo properly to anyone facing the open lid).
System Map: Top View with LCD Panel Open

1. Optional Built-In PC Camera
2. LCD
3. Speakers (Model A - See Figure 1 - 2)
4. LED Indicators
5. AP-key Buttons
6. Power Button
7. Built-In Microphone
8. Keyboard
9. TouchPad & Buttons
10. Audio "DJ" Display Panel (Including LED Indicators)

Wireless Device Operation Aboard Aircraft
The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the AP-key Buttons to toggle power to the WLAN, Bluetooth and PC Camera modules.

Figure 1 - 4 - Top View with LCD Panel Open
Quick Start Guide

LED Indicators
The two sets of indicators on the computer display helpful information about the current status of the computer. There are also indicators located on the display panel of the Audio "DJ".

AP-key Buttons
These buttons access the internet, e-mail and toggle power to the optional PC Camera, Wireless LAN and/or Bluetooth modules. Make sure you install the driver to enable the AP-key Button functions (refer to “What to Install” on page 4 - 1).

Function Keys & Numeric Keypad
The keyboard has an embedded numerical keypad for easy numeric data input (see Figure 1 - 5).

Activate the Number Lock feature by pressing the Num Lk key at the top right of the keyboard. You may check if Number Lock is enabled or not by looking at the LED status indicators.

2. Infrared Transceiver (see page 2 - 12)
3. Speaker
4. Secondary Device Bay Release Latch
5. Secondary (Optional) Device Bay
6. RJ-45 LAN Jack
7. PC Card Slot

3-in-1 Card Reader Formats
The card reader allows you to use the most popular digital storage card formats (see below). To remove any inserted cards, click the Safely Remove Hardware icon in the Windows taskbar and follow the instructions on page 2 - 7 in order to prevent system errors (DO NOT PULL THE CARD OUT OF THE SLOT).

MMC (MultiMedia Card)  SD (Secure Digital)  MS (Memory Stick)

Secondary (Optional) Device Bay Options
The following are the device options available for the Secondary Device Bay:

- 3-Mode Floppy Disk Drive
- 2nd Battery
- DVD-Dual OR Combo Drive
- 2nd Parallel (PATA) Hard Disk Drive
- 7-in-1 Card Reader

Warning: DO NOT attempt to change any device in the bay while the system is powered on, and make sure it is fully locked in position (see page 6 - 9).

2nd Battery
Do not try to startup the computer from the 2nd battery only.
System Map: Right View

7. CATV Jack (Enabled with Optional Mini-PCI TV Tuner Only)
8. 2 * USB 2.0 Ports
9. Speaker
10. DC-In Jack

Changing DVD Regional Codes

Go to the Control Panel and double-click System > Hardware (tab), then click the + next to DVD/CD-ROM drives. Double-click on the DVD-ROM device to bring up the Properties box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code (see “DVD Regional Codes” on page 2 - 5).

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer.

CD Emergency Eject

If you need to manually eject a CD/DVD (e.g. due to an unexpected power interruption) you may push the end of a straightened paper clip into the emergency eject hole. Do not use a sharpened pencil or similar object that may break and become lodged in the hole.
System Map: Bottom View

2. Speakers
3. Hard Disk Bay/TV Tuner Cover
4. Video Card Cover
5. CPU Cover
6. Vent/Fan Intake

Battery Information

Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See “Battery Information” on page 4-9 for full instructions.
Windows XP Start Menu & Control Panel

Most of the control panels, utilities and programs within Windows XP (and most other Windows versions) are accessed from the Start menu. When you install programs and utilities they will be installed on your hard disk drive, and a shortcut will usually be placed in the Start menu and/or the desktop. You can customize the look of the Start menu by right-clicking the Start menu and selecting Properties from the menu.

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel is accessed from the Start menu. The Control Panel allows you to configure the settings for most of the key features in Windows (e.g. power, video, network, audio etc.). Windows XP provides basic control panels for many of the features, however many new control panels are added (or existing ones are enhanced) when you install the drivers listed in Table 4 - 1, on page 4 - 6. To see all controls it may be necessary to toggle off Category View.
Quick Start Guide

Video Features

Video Driver Controls
This computer features **two** different (NVIDIA GeForce 6800 or ATI M28) PCI Express video card options (see “**Video Card Options**” on page D - 3). If you are unsure which video card your model features, then go to the BIOS and check “VGA Card:” under **System Information** in the **Advanced** menu (see “**System Information (Advanced Menu)**” on page 5 - 8).

You can switch display devices, and configure display options, from the **Display Properties** control panel in **Windows** as long as the appropriate **video driver** is installed. For more detailed video information see “**NVIDIA Video Driver Controls**” on page B - 1 or “**ATI Video Driver Controls**” on page C - 1 as appropriate for your video card option.

To access Display Properties in **Windows**:

1. Click **Start**, point to **Settings** and click **Control Panel** (or just click **Control Panel**).
2. Double-click **Display** (icon) - In the **Appearances and Themes** category.
3. Click **Settings** (tab) in the **Display Properties** dialog box.
4. Move the slider to the preferred setting in **Screen area/resolution** 🔄 (Figure 1 - 11 on page 1 - 17).
5. Click the arrow, and scroll to the preferred setting In **Colors/Color quality** 🔄 (Figure 1 - 11 on page 1 - 17).
6. You can also access **Display Properties** by right-clicking the desktop and scrolling down and clicking **Properties**. Click **Settings** (tab) and adjust as above.
7. Open the **Display Properties** control panel, and click **Advanced** (button) 🔄 (Figure 1 - 11 on page 1 - 17) to bring up the **Advanced properties** tabs. Clicking through these tabs (NVIDIA or ATI) allows you to make any video adjustments you require.
Quick Start Guide

Figure 1 - 11 - Display Properties Desktop

NVIDIA Display Properties

ATI Display Properties
Display Devices & Options

Besides the built-in LCD, you can also use an external VGA monitor/external Flat Panel Display or TV as your display device. A VGA monitor/Flat Panel Display connects to the DVI-Out port, a TV to the S-Video-Out Port. The following display modes are available (see “NVIDIA Video Driver Controls” on page B - 1 or “ATI Video Driver Controls” on page C - 1 for details).

Table 1 - 5 - Display Options
Power Management Features

The Power Options control panel in Windows (see page 1 - 14) allows you to configure power management features for your computer. You may conserve power through individual components such as the monitor or hard disk (by means of Power Schemes), or you may use either Standby or Hibernate mode to conserve power throughout the system (enable Hibernate support from the control panel as pictured in Figure 1 - 12). Pay attention to the instructions on battery care in “Battery Information” on page 3 - 9.

![Power Options](image)

Figure 1 - 12 - Power Options

The computer’s power button, sleep button (Fn + F4 key combination), and closing the computer’s lid may be set to send the computer in to either Standby or Hibernate mode.

Power Saving and Performance

Power Schemes may have an affect on your computer performance (see “Power Schemes” on page 3 - 4).
Chapter 2: Storage Devices, Mail Program, Mouse, Audio & Printer

Overview

Read this chapter to learn more about the following main features and components of the computer:

• Hard Disk Drive
• Optical Device
• 3-in-1 Card Reader
• PC Card Slot
• Auto Mail Checker
• TouchPad and Buttons/Mouse
• Audio Features
• Audio "DJ" CD Player
• Configuring the Infrared Settings for FIR
• Adding a Printer
Hard Disk Drive

The hard disk drive is used to store your data in the computer. The hard disk can be taken out to accommodate other 2.5" serial (SATA) or parallel (PATA) hard disk drives with a height of 9.5 mm (see “Storage Options” on page E - 3 for details).

The hard disk 1 is accessible from the bottom of your computer as seen below (both parallel and serial connectors are provided). Further details on removing and inserting the hard disk are available in “Upgrading the Hard Disk Drive(s)” on page 6 - 4.

Note that the Secondary (Optional) Device Bay supports parallel (PATA) hard disks only.
Optical Device

There is a bay for a 5.25" optical (Combo or DVD-Dual) device (12.7mm height). The actual device will depend on the model you purchased. The optical device is usually labeled “Drive D:” and may be used as a boot device if properly set in the BIOS (see “Boot Menu” on page 5 - 13).

Loading Discs

To insert a CD/DVD, press the open button 1 and carefully place a CD/DVD onto the disc tray with label-side facing up (use just enough force for the disc to click onto the tray’s spindle). Gently push the CD/DVD tray in until its lock “clicks” and you are ready to start. The busy indicator 2 will light up while data is being accessed, or while an audio/video CD, or DVD, is playing. If power is unexpectedly interrupted, insert an object such as a straightened paper clip into the emergency eject hole 3 to open the tray.

Sound Volume Adjustment

How high the sound volume can be set depends on the setting of the volume control within Windows. Click the Volume icon on the taskbar to check the setting. Peripherals must be connected before you turn on the system.

Figure 2 - 2
Optical Device
Handling CDs or DVDs
Proper handling of your CDs/DVDs will prevent them from being damaged. Please follow the advice below to make sure that the data stored on your CDs/DVDs can be accessed.

Note the following:
- Hold the CD or DVD by the edges; do not touch the surface of the disc.
- Use a clean, soft, dry cloth to remove dust or fingerprints.
- Do not write on the surface with a pen.
- Do not attach paper or other materials to the surface of the disc.
- Do not store or place the CD or DVD in high-temperature areas.
- Do not use benzene, thinner, or other cleaners to clean the CD or DVD.
- Do not bend the CD or DVD.
- Do not drop or subject the CD or DVD to shock.
DVD Regional Codes
To change the DVD regional codes see “Changing DVD Regional Codes” on page 1 - 13.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Table 2 - 1
DVD Regional Coding

Figure 2 - 3
DVD Regions
The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device. The following formats can be read by the card reader (see over for instructions on removing a card):

- SD (Secure Digital)
- MMC (MultiMedia Card)
- MS (Memory Stick)

The cards will appear as removable disks on the computer and can be accessed in the same way as your hard disk(s). For further information on the optional 7-in-1 Card Reader, see “The 7-in-1 Card Reader Module” on page 7 - 7.
Removing Cards from the Card Reader

To remove any inserted cards, click the Safely Remove Hardware icon in the Windows taskbar and follow the instructions below in order to prevent system errors (DO NOT PULL THE CARD OUT OF THE SLOT).

1. Click the icon in the taskbar, and click to select the card from the pop-up list.
2. A “Safe To Remove Hardware” bubble will pop-up to indicate you may now safely remove the card from the reader slot.

OR

1. Right-click the icon in the taskbar, and click “Safely Remove Hardware”.
2. Select the device from the list and click Stop > OK.
3. A “Safe To Remove Hardware” bubble will pop-up to indicate you may now safely remove the card from the reader slot.
PC Card Slot

The computer is equipped with a PCMCIA 3.3V/5V slot for one type II PC Card. Make sure you install the driver for the PC Card (see “What to Install” on page 4 - 1).

Inserting and Removing PC Cards

• Align the PC Card with the slot and push it in until it locks into place.
• To remove a PC Card, simply press the eject button next to the slot.
Auto Mail Checker

After you have installed the driver for the Auto Mail Checker program (see “What to Install” on page 4 - 1) you may then configure it to give you notification when you receive new mail. You must be online to receive this notification (note that this program only supports the POP3 protocol), and your default mail program does not need to be open.

The Auto Mail Checker appears as an icon in the taskbar (if you do not see the icon in the taskbar go to Start > Programs/All Programs > Auto Mail Checker > Auto Mail Checker). Clicking on the icon will bring up the following options menu. If you have not input your mail account data, then you will be prompted to do so.

Select Open to bring up the control panel for the program.
You may then configure the options for your mailserver, name, password, program and method(s) of notification.

Figure 2 - 9
Auto Mail Checker
Account Setup and Options
The TouchPad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The TouchPad buttons function in much the same way as a two-button mouse. The central button may be configured to function as you require.

**Configuring the TouchPad and Buttons**
Once you have installed the TouchPad drivers (see "What to Install" on page 4 - 1) you can configure the functions (TouchPad tapping, buttons, scrolling, pointer motion and sensitivity options) by double-clicking the TouchPad driver icon on the taskbar. You will find further information at www.synaptics.com.

**Mouse Driver**
If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.
Audio Features

You can configure the audio options on your computer from the Sounds and Audio Devices \(\text{Windows}\) control panel (see Figure 1 - 10 on page 1 - 15), or from the Sound Effect Manager icon in the taskbar/control panel (this will bring up the Realtek Audio Configuration menus). The volume may also be adjusted by means of the \(\text{Fn} + F5/F6\) key combination.

Sound Volume Adjustment

How high the sound volume can be set using the volume control knob depends on the setting of the volume control within Windows. Click the Speaker icon on the taskbar to check the setting.

Figure 2 - 11
Realtek Audio Configuration Menus
Audio "DJ" CD Player

The built-in standalone audio CD player gives you direct hardware control for audio CDs/DVDs when the computer is shut down, but has a working power source.

1. Make sure that the computer is shut down (i.e. the operating system is not running) but you have a working power source (either battery or AC Power).
2. Press the Audio "DJ" power button.
3. Press the open button on your CD/DVD device (or press the stop button twice) and carefully place an audio CD onto the disc tray with label-side facing up (DVD drives will also play audio CDs).
4. Gently push the CD/DVD tray in until its lock "clicks" and you are ready to start.
5. The Audio Format Indicator will flash while data is being accessed and will then display the audio format of the CD/DVD (CD or MP3).
6. The LED will display the number of tracks.
7. Click the play/pause button to start the CD/DVD.
8. You can control the CD/DVD tracking and volume from the control panel.
9. Use the stop button to stop the disc, or press it twice to eject the disk.
10. The player can be turned off by pressing the power button again.
TV Tuner Option

If you have included the optional TV Tuner in your purchase configuration, you can use the supplied remote control unit to control the Audio "DJ".

Figure 2 - 12
Audio "DJ" Controls

1. Audio "DJ" Power Switch
2. Mode Button (CD, MP3)
3. Shuffle (loop, in order, shuffle)
4. LED Display
5. Audio Format Indicator
6. Previous Track
7. Next Track
8. Play/Pause
9. Stop (press twice to eject the CD/DVD)
10. Volume Up/Down
Configuring the Infrared Settings for FIR

To configure your computer for Fast Infrared (FIR) communication follow these steps:

1. Click **Start**, point to **Settings** and click **Control Panel** (or click **Start > Control Panel**).
2. Double-click **Wireless Link (Printers and Other Hardware Category)** icon.
3. Click **Hardware** (tab), and click the **Properties** button, then click the **Advanced** (tab).
4. Select “Infrared Transceiver A” and change the **Value** to “HP HSDL-2300/3600”.
5. Click **OK > OK**.

For further information, please refer to the manual of the device you wish to connect.

The computer’s Consumer Infrared transceiver may be used with the remote control supplied with the **optional** TV Tuner (see “System Map: Front & Rear Views” on page 1 - 11 & “The TV Tuner Module” on page 7 - 8).
Adding a Printer

The most commonly used peripheral is a printer. The following conventions will help you to add a printer, however it is always best to refer to the printer manual for specific instructions and configuration options.

USB Printer

Most new printers have a USB interface connection. You may use any one of the ports to connect the printer.

Install Instructions:
1. Set up the printer according to its instructions (unpacking, paper tray, toner/ink cartridge etc.).
2. Turn ON the computer.
3. Turn ON the printer.
4. Connect the printer’s USB cable to one of the USB ports on the computer.
5. *Windows* will identify the printer and either load one of its own drivers or ask you to supply one. Follow the on-screen instructions.

Parallel Printer

This is still a very common type of printer. The install instructions are in the sidebar.

Parallel Printer

After setting up the printer attach the parallel cable to the printer.

Connect the printer’s parallel cable to the Parallel port.

Turn the printer ON, then turn ON the computer.

*Windows* will identify the printer and either load one of its own drivers or ask you to supply one. Follow the on-screen instructions.
Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer uses the ACPI power management system. Power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system.

This chapter covers:

• The Power Sources
• Turning on the Computer
• Power Schemes
• System Power Options
• Configuring the Power Button
• Battery Information

Advanced Configuration and Power Interface

The ACPI interface provides the computer with enhanced power saving techniques and gives the operating system (OS) direct control over the power and thermal states of devices and processors. For example, it enables the OS to set devices into low-power states based on user settings and information from applications. ACPI is fully supported in Windows XP.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user's manual of your operating system.
The Power Sources

The computer can be powered by either an AC adapter or a battery pack.

AC Adapter

Use only the AC adapter that comes with your computer. The wrong type of AC adapter will damage the computer and its components.

1. Attach the AC adapter to the DC-in jack on the right of the computer.
2. Plug the AC power cord into an outlet, and then connect the AC power cord to the AC adapter.
3. Raise the lid/LCD to a comfortable viewing angle.
4. Press the power button to turn “On”.

Battery

The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “How do I completely discharge the battery?” on page 3-12).

We recommend that you do not remove the primary battery. For more information on the battery, please refer to “Battery Information” on page 3-9.
Turning on the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Standby/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options in the Windows control panel to configure this feature.

Shut down

Note that you should always shut your computer down by choosing the Shut Down/Turn Off Computer command from the Start menu in Windows. This will help prevent hard disk or system problems.

Forced Off

If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for 4 seconds, or longer, to force the system to turn itself off.

Power Button as Standby or Hibernate Button

If you are using a fully ACPI-compliant OS, (such as Windows XP) you can use the OS’s “Power Options” control panel to set the power button to send the system into Standby or Hibernate mode (see your OS’s documentation, or “Configuring the Power Button” on page 3 - 8 for details).
Power Management

Power Schemes

You can set your computer to conserve power through individual components by means of Power Schemes. You can also adjust the settings for each scheme to set the monitor to turn off after a specified time, and the computer's hard disk motor to turn off if the hard disk drive has not been accessed for a specified period of time (if the system reads or writes data, the hard disk motor will be turned back on). The schemes may also be set to set a specified time for the system to enter Standby or Hibernate modes (see “System Power Options” on page 3 - 6).

Resuming Operation

The system can resume from Monitor or Hard Disk Standby by pressing a key on the keyboard.

Figure 3 - 1
Power Schemes
Each *Windows Power Scheme* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose the **Home/Office Desk** scheme for maximum performance when the computer is powered from an AC power source. Choose the **Max Battery** scheme (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

*Windows* will use **Portable/Laptop** as the default scheme.
System Power Options

You can use the system power options to stop the computer’s operation and restart where you left off. This system features **Standby** and **Hibernate** sleep mode levels (**Hibernate** mode will need to be enabled by clicking the option in the **Hibernate** tab in the **Power Options** control panel - *Figure 3 - 2 on page 3 - 7*).

**Hibernate Mode vs. Shutdown**

Hibernate mode and Shutdown are the same in that the system is off and you need to press the power button to turn it on. Their main difference is:

When you come back from hibernation, you can return to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

You can use either method depending on your needs.

**Standby Mode vs. Hibernate Mode**

If you want to stay away from your work for just a while, you can put the system on standby instead of in hibernation. It takes a longer time to wake up the system from **Hibernate** mode than from **Standby** mode.
Standby
Standby saves the least amount of power, but takes the shortest time to return to full operation. During Standby the hard disk is turned off, and the CPU is made to idle at its slowest speed. All open applications are retained in memory. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter Standby mode to save power.

Hibernate
Hibernate uses no power and saves all of your information on a part of the HDD before it turns the system off. Although it saves the most power it takes the longest time to return to full operation. You can set your computer to automatically enter Hibernate mode when the battery power is almost depleted. You will need to enable Hibernate mode from the Hibernate tab in the Power Options control panel. The system will resume from Hibernate mode by pressing the power button.

System Resume
The system can resume from Standby mode by:
- Pressing the power button
- Pressing a key on the keyboard
- An alarm resume that is enabled and expires
- An incoming call received on the modem (if enabled)
- Network card activity (if enabled)

Figure 3 - 2
Enable Hibernation
Configuring the Power Button

The power button may be set to send the computer in to either **Standby** or **Hibernate** mode (*Figure 3 - 3*). In **Standby** mode, the LED \( \bigcirc \) will flash green. In **Hibernate** mode the LED will be off. If you are in a power saving mode set to save power through individual components (e.g. hard disk, monitor), the LED will remain green.

*Figure 3 - 3
Power Options
(Advanced - Power Buttons)*

You may also configure the **Sleep/Resume** key combination \( (\text{Fn} + \text{F4}) \) from the menu illustrated in *Figure 3 - 3*. In **Windows** this is referred to as the **Sleep** button.
Battery Information

Please follow these simple guidelines to get the best use out of your battery.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 12 for instructions on how to do this).

Battery Life
Your computer’s battery life is dependent upon many factors, including the programs you are running, and peripheral devices attached. Power Options (you may set low battery Alarms and actions, and check the Power Meter from the Power Options control panel), and settings in the OS will help prolong the battery life if configured appropriately.

Low Battery Warning
When the battery is critically low, immediately connect the AC adapter to the computer or save your work, otherwise, the unsaved data will be lost when the power is depleted.

If 2 Batteries Installed

Figure 3 - 4
Power Options (Alarm & Power Meter)
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days.

We recommend that you do not remove the primary battery yourself. If you do need to remove the battery for any reason see "Removing the Primary Battery" on page 6 - 3.

Recharging the Battery with the AC Adapter
The battery pack automatically recharges when the AC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. Refer to "LED Indicators" on page 1 - 8 for information on the battery charge status, and to "Battery Information" on page 3 - 9 for more information on how to maintain and properly recharge the battery pack(s).
Proper Handling of the Battery Pack

- **DO NOT** disassemble the battery pack under any circumstances
- **DO NOT** expose the battery to fire or high temperatures, it may explode
- **DO NOT** connect the metal terminals (+, -) to each other

**Damaged Battery Warning**

Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your service center. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer by yourself (save and close any critical files, and make sure you have closed all open applications in order to prevent any data loss) even when you see a message that indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own. Disable the **Power Options** functions in the **Control Panel**, especially any **Alarms** (unclick the tickboxes - see 3 - 9) and **Schemes** (change all the settings to **Never** - see page 3 - 4).

How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities. This chapter covers driver and utility installation instructions for Windows XP (Professional & Home).

What to Install

The Device Drivers & Utilities + User’s Manual CD-ROM contains the drivers and utilities necessary for the proper operation of the computer. The drivers for all the optional modules (WLAN, Bluetooth, PC Camera and TV Tuner) are on the separate CD-ROMs supplied. Table 4 - 1, on page 4 - 6 lists what you need to install, and it is very important that the drivers are installed in the order indicated.

Module Driver Installation

The procedures for installing drivers for the WLAN, Bluetooth, PC Camera and TV Tuner modules are provided in Chapter 7 “Modules”. Make sure that the drivers are installed in the order indicated in Table 4 - 1, on page 4 - 6.
Navigate (Browse..) to D:

You will notice that many of the instructions for driver installation require you to "Navigate (Browse) to D:". We assume that you will install all drivers and utilities from the built-in CD device and it is assigned to "Drive D:". In addition, all file extensions can be seen

In this case "D:" is the drive specified for your CD device. Not all computers are setup the same way, and some computers have the CD listed under a different drive letter - e.g. if you have two hard drives (or hard disk partitions) one may be designated as “Drive C:" and the other as “Drive D:". In this case the CD device may be designated as “Drive E:" - Please make sure you are actually navigating to the correct drive letter for the CD device.

When you click the Browse (button) after clicking Run in the Start menu you will see the "Look in:" dialog box at the top of the Browse window. Click the scroll button to navigate to My Computer to display the devices and drive letters.

Figure 4 - 1 - Navigate (Browse..) to..
**Service Packs**

Make sure you have installed the appropriate Service Pack **before** installing all the drivers. If you are unsure of the Service Pack currently installed see below.

---

**Service Pack Installed**

To see which **Service Pack** is currently installed on your computer go to the **General** tab of the **System** control panel. Right-click the **My Computer** icon on the desktop or in the **Start** menu and select **Properties**. The Service Pack currently installed on your system will be listed under the "**System:**" heading. (If no Service Pack information is listed, then no Service Pack is installed.)

---

**Windows XP Service Pack 2**

Make sure you install **Windows XP Service Pack 2** (or a Windows XP version which includes Service Pack 1) **before installing any drivers**. Service Pack 1 includes support for **USB 2.0**.

If you have **upgraded** the system by installing **Service Pack 2** (i.e. your Windows XP version does not include Service Pack 2) then follow these instructions:

1. Click **Start** (menu), point to **Settings** and click **Control Panel** (or click **Start > Control Panel**).
2. Double-click **System** (icon); **System** (icon) is in **Performance and Maintenance** (category).
3. Click the **Hardware** (tab) > **Device Manager** (button).
4. Click "+" next to **Other Devices** (if its sub-items are not shown).
5. Right-click **Universal Serial Bus (USB) Controller** and select **Uninstall > OK** (if you don't see the item then there is no need to take any further action).
6. Restart the computer and it will find the USB 2.0 controller.
Drivers & Utilities

Authorized Driver Message
If you receive a message telling you that the driver you are installing is not authorized (Digital Signature Not Found), just click Continue Anyway to ignore the message and continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

Version Conflict Message
During driver installation if you encounter any “file version conflict” message, please click Yes to choose to keep the existing (newer) version.

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the Control Panel in the Windows OS and double-click the Add/Remove Programs item. If you see the individual driver listed (if not see below), uninstall it, following the on screen prompts (it may be necessary to restart the computer). Go to the appropriate section of the manual to complete the update/reinstall procedure for the driver in question.

If the driver is not listed in the Add/Remove Programs item:
1. Click Start (menu), point to Settings and click Control Panel (or click Start > Control Panel).
2. Double-click System (icon); System (icon) is in Performance and Maintenance (category).
3. Click Hardware (tab) > Device Manager (button).
4. Double-click the device you wish to update/reinstall the driver for (click “+” to see sub-items).
5. Look for the Update Driver button (check the Driver tab) and follow the on screen prompts.

4 - 4 What to Install
Driver Installation

Insert the Device Drivers & Utilities + User’s Manual CD-ROM and the Notebook Driver Installation application will run automatically. If you want to install the driver manually see “Manual Driver Installation” on page 4 - 6.

1. Check the driver installation order from Table 4 - 1, on page 4 - 6 (the drivers must be installed in this order) which is the same as that listed in the driver installation screen menu.
2. Double-click to select the name of the driver you wish to install.
3. Wait for the driver to start installing.
4. The computer may need to restart (check the instructions in this chapter).
5. Make a note of the drivers you have installed.
6. To get back to the Driver Installation screen after a restart click Start (menu) > Run... and navigate (Browse..) to D:\setup.exe and click OK.
   OR
   Double-click the My Computer icon, and then double-click the CD icon.
Drivers & Utilities

Manual Driver Installation
If you wish to install the drivers manually, click the **Exit** button to quit the *Notebook Driver Installation* application, then follow the manual installation procedure for each driver. The manual installation procedure begins with instructions on how to browse to the executable file; “Click **Start** (menu) > **Run...**”.

*Table 4 - 1 - Driver Installation Order*
Windows XP Drivers

This section covers driver and utility installation instructions for *Windows XP* (Professional & Home).

**New Hardware Found**
If you see the message “New Hardware Found” (Found New Hardware Wizard) during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.

**Chipset (WinXP)**
1. Run the Notebook Driver Installation application and double-click Chipset.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\01CHIPSET\Setup.exe and click OK.
2. Click Next > Yes > Next.
3. Click Finish to restart the computer.

**Windows XP Service Pack 2**
Make sure you install *Windows XP Service Pack 2* (or a Windows XP version which includes Service Pack 2) before installing any drivers. Service Pack 2 includes support for USB 2.0.

If you have upgraded the system by installing Service Pack 2 (i.e. your Windows XP version does not include Service Pack 2) then follow the instructions in “Windows XP Service Pack 2” on page 4 - 3.
Drivers & Utilities

Audio (WinXP)

1. Run the Notebook Driver Installation application and double-click Audio.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\02AUDIO\Setup.exe and click OK.
2. Click Next (click Cancel if The Found New Hardware Wizard appears).
3. Click Finish to restart the computer.
4. When the computer restarts click Cancel if the The Found New Hardware Wizard appears.
5. Click Yes to restart the computer (click Cancel if The Found New Hardware Wizard appears after the restart).

Modem (WinXP)

1. Run the Notebook Driver Installation application and double-click Modem.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\03MODEM\Setup.exe and click OK.
2. Click (button).
3. Click (button).
4. The modem is ready for dial-up configuration.

Modem Country Selection

Go to the Phone and Modem Options control panel (in the Printers and Other Hardware Category) and check if the modem country selection is appropriate for your country.
LAN (WinXP)
1. Run the Notebook Driver Installation application and double-click **Lan**.
   **OR**
   Click **Start** (menu) > **Run**... and navigate (**Browse..**) to **D:\Drivers\04LAN\WinXP\SetupYukonWin.exe** and click **OK**.
2. Click **Next**.
3. Click the button to accept the license and click **Next**.
4. Click **Next > Install > Finish**.
5. The network settings can now be configured.

Video (WinXP)
The installation method for the video driver will depend on whether your purchase option includes either an **NVIDIA** or **ATI** PCI-Express Video Card. If you run the Notebook Driver Installation application it will automatically detect the appropriate driver.

For NVIDIA PCI Express video cards see **“NVIDIA Video Driver Installation” on page B - 1.**

For ATI PCI Express video cards see **“ATI Video Driver Installation” on page C - 1.**
Drivers & Utilities

AP-Key Buttons (WinXP)
1. Run the Notebook Driver Installation application and double-click AP-key.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\06APKey\Setup.exe and click OK.
2. Click Next.
3. Click Finish to restart the computer.

TouchPad (WinXP)
1. Run the Notebook Driver Installation application and double-click Touchpad.
   OR
   Click Start (menu) > Run... and navigate (Browse...) to D:\Drivers\07TOUCHPAD\WINXP\Setup.exe and click OK.
2. Click Next > Next > Next (click Continue Anyway if asked if you want to continue at any time).
3. Click Finish to restart the computer.
4. You may then configure the TouchPad as outlined in “Configuring the TouchPad and Buttons” on page 2 - 11.
PCMCIA & Card Reader (WinXP)
1. Run the Notebook Driver Installation application and double-click **PCMCIA**.
   OR
   Click **Start** (menu) > **Run**... and navigate (Browse...) to **D:\Drivers\08PCMCIA\setup.exe** and click OK.
2. Choose the language you prefer, and click **OK**.
3. Click **Next > Finish**.

Auto Mail Checker (WinXP)
1. Run the Notebook Driver Installation application and double-click **Automail**.
   OR
   Click **Start** (menu) > **Run**... and navigate (Browse..) to **D:\Drivers\09AUTOMAIL\SETUP.EXE** and click OK.
2. To continue click **Next > Next > Finish**.
3. Run the program from the Auto Mail Checker in the **Start** menu (**Start > Programs/All Programs > Auto Mail Checker**).
4. Click the icon in the taskbar to input the e-mail account details.
5. For further details see “Auto Mail Checker” on page 2 - 9.
Drivers & Utilities

**LCDAP (WinXP)**

1. Run the Notebook Driver Installation application and double-click **LCDAP**.
   OR
   Click **Start** (menu) > **Run...** and navigate (**Browse...**) to `D:\Drivers\10LCDAP\LCDAP.exe` and click **OK**.
2. This will run the program (see "1.8" Top Case LCD” on page D - 1 for further instructions).
3. If you wish to copy the application to the hard disk make sure you copy the whole LCDAP folder to your hard disk (e.g. C: drive).

**Module Drivers**

See the following pages for the driver installation procedures for any modules included in your purchase option.

**Wireless LAN (WinXP)**

See the install procedure in “MSI 6855A (802.11b/g) Wireless LAN Driver Installation” on page 7 - 3 or “ZCOM (802.11a/b/g) WLAN Module Driver Installation” on page 7 - 4.

**Bluetooth (WinXP)**

See the install procedure in “Bluetooth Module Driver Installation” on page 7 - 5.

**TV Tuner (WinXP)**

See the install procedure in “Installing the AverTV Utility Software” on page 7 - 9, and “Installing the InterVideo WinDVD 4 Software” on page 7 - 9.

**PC Camera (WinXP)**

See the install procedure in “Kenmec PC Camera Driver Installation (WinXP)” on page 7 - 11 or “Sertek PC Camera Driver Installation (WinXP)” on page 7 - 11.
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software:

**Diagnostics:** The **POST** (Power-On Self Test)

**Configuration:** The **Setup** utility

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in **Setup**. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: *Don’t make any changes unless you are sure of what you are doing.* Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.
The Power-On Self Test (POST)

Each time you turn on the computer, the system takes a few seconds to conduct a POST, including a quick test of the on-board RAM (memory).

As the POST proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run Setup.

If there are no problems, the Setup prompt will disappear and the system will load the operating system. Once that starts, you can’t get into Setup without rebooting.

Figure 5 - 1
POST Screen

POST Screen
1. BIOS information
2. CPU type
3. Memory status
4. Enter Setup prompt appears only during POST

Note: The POST screen as pictured is for guideline purposes only. The POST screen on your computer may appear slightly different.

Boot Logo Screen
If you have enabled the Boot Logo Screen then the POST screen will not appear. You can still press F2 to enter Setup (see “Boot Logo Screen:” on page 5 - 10).

Press <F2> to enter SETUP
Failing the POST
Errors can be detected during the POST. There are two categories, “fatal” and “non-fatal”.

Fatal Errors
These stop the boot process and usually indicate there is something seriously wrong with your system. Take the computer to your service representative or authorized service center as soon as possible.

Non-Fatal Errors
This kind of error still allows you to boot. You will get a message identifying the problem (make a note of this message!) followed by the prompt:

- Press <F1> to resume
- <F2> to enter Setup

Press F1 to see if the boot process can continue. It may work, without the correct configuration.

Press F2 to run the Setup program and try to correct the problem. If you still get an error message after you change the setting, or if the “cure” seems even worse, call for help.
The Setup Program

The Phoenix Setup program tells the system how to configure itself and manage basic features and subsystems (e.g. port configuration).

Entering Setup
To enter Setup, turn on the computer and press F2 during the POST. The prompt (Press F2 to Enter Setup) seen in Figure 5 - 1 is usually present for a few seconds after you turn on the system. If you get a “Keyboard Error”, (usually because you pressed F2 too quickly) just press F2 again.

If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The Setup main menu will appear.
Setup Screens

The following pages contain additional advice on portions of the Setup.

Along the top of the screen is a menu bar with five (5) menu headings. When you select a heading, a new screen appears. Scroll through the features listed on each screen to make changes to Setup.

Instructions on how to navigate each screen are in the box along the bottom of the screen. If these tools are confusing, press F1 to call up a General Help screen, then use the arrow keys to scroll up or down the page.

The Item Specific Help on the right side of each screen explains the highlighted item and has useful messages about its options.

If you see an arrow next to an item, press Enter to go to a sub-menu on that subject. The sub-menu screen that appears has a similar layout, but the Enter key may execute a command.
### Main Menu

**System Time & Date**
The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.

<table>

**F10** | Save and Exit  
|
IDE Channel 0  Master/Slave
Pressing **Enter** here opens the sub-menu to show the configuration of either a CD/DVD type Device or HDD on the computer’s IDE Channel 0. Use the **Auto** (Type:) setting to have the items configured automatically for you.

SATA Port 1/2
Pressing **Enter** here opens the sub-menu to show the configuration of any hard disks on the computer’s SATA Port 1 or 2. Use the **Auto** (Type:) setting to have the items configured automatically for you.

Installed memory
This item contain information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed, the amount used by devices, and the unused memory available to the operating system (OS).
System Information
Pressing Enter here will provide valuable information on your system including CPU type and speed etc. System Information will also display which video card (NVIDIA or ATI) is installed on your computer.
**I/O Device Configuration**

The sub-menus under this item include options to configure the **Serial port A (Serial Mouse)**, **Serial port B (Infrared)** and **Parallel (Printer) port**. These can be left to the default settings, however you may wish to use certain devices that require settings to be adjusted accordingly. Check the documentation for any such devices to see what settings are required.

**Flash Top Case Logo > I/O Device Configuration**

This item allows you to enable the serial port for application programming of the top case logo. After programming the logo make sure you reset the option to **“Disabled”** (default) otherwise the serial port will not work.
Reset Configuration Data:
This item is set to No as default. You can change the setting to Yes if you have installed a new add-on which has reconfigured the system, resulting in such a serious system conflict that the operating system is unable to boot.

Hyper-Threading Technology
Enable Hyper-Threading (it is “Enabled” by default) to increase performance of your computer depending on the hardware and software you use (all the processor options in this notebook series support Hyper Threading Technology). Hyper Threading is supported fully in Windows XP, but it is strongly recommended you DO NOT enable this option in other operating systems. Once you have enabled Hyper-Threading, DO NOT disable the option. (If you do disable the option you will need to reinstall your operating system.)

Power On Beep
Use this menu to enable/disable the single beep sound at the end of the POST. This item is “Disabled” by default.

Boot Logo Screen:
This menu item allows you to enable/disable the Boot Logo Screen as the computer starts up (it is “Disabled” by default). This will affect what sort of POST screen you see.
## Security Menu

<table>
<thead>
<tr>
<th>Main</th>

<th>Security</th>
<th>Boot</th>
<th>Exit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Supervisor Password**

Set Supervisor Password: [Enter]

Password on boot: [Disabled]

---

### Set Supervisor Password

You can set a password for access to the **Setup** utility. This will not affect access to the computer OS, (only the **Setup** utility) unless you choose to set a **Password on Boot** (see over).
Password on boot:
Specify whether or not a password (supervisor or user password) should be entered to boot the computer. If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Note: To clear existing passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance.
Boot Menu

When you turn the computer on it will look for an operating system (e.g. WindowsXP) from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot priority order. Item specific help on the right is available to help you move devices up and down the order.

Legacy Floppy Drives

If you have a Legacy Floppy Drive installed in your Secondary (Optional) Device Bay it will appear in the boot priority order.

If you remove the drive and then reinserit it at a later time, it will then be excluded from the boot order.

Use either the <X> key, or press F9 to load the Setup Defaults, to restore the drive to the boot order.
Boot devices usually are hard drives, floppy drives, and CD/DVD-ROMs and networks (LAN).

When you specify a device as a boot device on the **Boot Menu**, it requires the availability of an operating system on that device. Most home computers come with an operating system already installed on “Drive C:”.

If you wish to boot from a CD/DVD-ROM you will need to add it to the boot order. As a general rule the order below is recommended:

1. Removable Devices (usually floppy disks)
2. CD-ROM/DVD-ROM type Device Drive
3. Hard Disk Drive
4. LAN (Network)

In everyday use you will usually boot from the hard drive, however there may be occasions when it is advantageous to boot from a floppy disk (e.g. an external USB floppy disk drive) or CD-ROM/DVD-ROM.
Choosing to **Discard Changes**, or **Exit Discarding Changes**, will wipe out any changes you have made to the **Setup**. You can also choose to restore the original **Setup** defaults that will return the **Setup** to its original state, and erase any previous changes you have made in a previous session.
Chapter 6: Upgrading The Computer

Overview

This chapter contains information on upgrading the computer. Follow the steps outlined to make the desired upgrades. If you have any trouble or problems you can contact your service representative for further help. Before you begin you will need:

• A small crosshead or Phillips screwdriver
• A small regular slotted (flathead) screwdriver
• An antistatic wrist strap

Before working with the internal components you will need to wear an antistatic wrist strap to ground yourself because static electricity may damage the components.

The chapter includes:

• Removing the Primary Battery
• Upgrading the Hard Disk Drive(s)
• Upgrading the System Memory (RAM)
• Changing the Secondary Bay Device

Please make sure that you review each procedure before you perform it.

Warranty Warning

Please check with your service representative before undertaking any upgrade procedures to find out if this will VOID your warranty.
When Not to Upgrade

These procedures involve opening the system’s case, adding and sometimes replacing parts.

You should not perform any of these upgrades if:

- Your system is still under warranty or a service contract
- You don’t have all the necessary equipment
- You’re not in the correct environment
- You doubt your abilities

Under any of these conditions, contact your service representative to purchase or replace the component(s).
Removing the Primary Battery

If you are confident in undertaking upgrade procedures yourself, for safety reasons it is best to remove the battery (batteries).

1. Turn the computer off, and turn it over.
2. Move the battery release latches in the direction of the arrows 1 - 2.
3. The battery will pop-up.
4. Lift the battery 3 out of the battery bay.
5. When re-inserting the battery, make sure that it is firmly pushed down into the bay and the battery release latches click back into position.

Warranty Warning

Please check with your service representative before undertaking any upgrade procedures to find out if this will VOID your warranty.

2nd Battery

If you have included the secondary battery in your purchase configuration, remember to remove the secondary battery before undertaking any upgrade procedures (see page 6 - 9).

Figure 6 - 1
Battery Removal
Upgrading the Hard Disk Drive(s)

The hard disk drive(s) can be taken out to accommodate other 2.5" parallel (PATA) or serial (SATA) hard disk drives with a height of 9.5mm (h) (see “Storage Options” on page E - 3). Follow your operating system’s installation instructions, and install all necessary drivers and utilities (as outlined in “Drivers & Utilities” on page 4 - 1), when setting up a new hard disk.

1. Turn off the computer, and turn it over and remove the battery.
2. Locate the hard disk bay cover and remove screws 1 - 3.
3. Remove the bay cover 4.

Figure 6 - 2
Hard Disk Cover Removal

HDD System Warning
New HDD’s are blank. Before you begin make sure:
You have backed up any data you want to keep from your old HDD.
You have all the CD-ROMs and FDDs required to install your operating system and programs.
If you have access to the internet, download the latest application and hardware driver updates for the operating system you plan to install. Copy these to a removable medium.

6 - 4 Upgrading the Hard Disk Drive(s)
4. Push the parallel hard disk assembly in the direction of the arrow 5 (serial HDD’s push in the opposite direction - see sidebar) and lift the assembly up out off the computer.
5. Remove screws 7 - 10 in order to separate the bracket from the hard disk.
6. Reverse the process to install a new hard disk(s).

Hard Disk Connectors

There are two hard disk connectors on this computer. The pictured hard disk assembly is connected to the parallel connector; the serial connector is on the opposite side.

Figure 6 - 3
Hard Disk Removal
Upgrading The Computer

Upgrading the System Memory (RAM)

The computer has **two** memory sockets for 200 pin Small Outline Dual In-line (SO-DIMM) **DDR** type memory modules (see “Memory” on page E - 2). The total memory size is automatically detected by the POST routine once you turn on your computer.

1. Turn **off** the computer, and remove the battery.
2. Press the **three** keyboard latches 1 - 3 at the top of the keyboard to elevate the keyboard from its normal position (you may need to use a small screwdriver to do this).
3. Carefully lift the keyboard up and disconnect the keyboard ribbon cable by using a screwdriver to carefully push up the pins 4 & 5 (be careful not to bend the keyboard ribbon cable).

*Contact Warning*

Be careful not to touch the metal pins on the module’s connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module’s performance.

*Figure 6 - 4
Keyboard Release*
4. Set the keyboard aside.
5. Remove screws 6 & 7 from the keyboard shielding plate, and lift off the shielding plate 8.
Upgrading The Computer

6. Gently pull the two release latches (9 & 10) on the sides of the memory socket in the direction indicated by the arrows.

7. The RAM module 11 will pop-up, and you can remove it.
8. Pull the latches to release the second module if necessary.
9. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
10. The module’s pin alignment will allow it to only fit one way. Make sure the module is seated as far into the slot as it will go. DO NOT FORCE the module; it should fit without much pressure.
11. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
12. Replace the shielding plate and keyboard.
13. Restart the computer to allow the BIOS will register the new memory configuration as it starts up.
Changing the Secondary Bay Device

1. Turn off the computer, and turn it over and remove the battery.
2. Move and hold the secondary bay release latch 1 (on the left side of the computer) in the direction of the arrow.
3. Pull the device 2 out of the bay while gripping it at point 3.
4. When inserting a new device make sure it is pushed fully into the slot until the release latch 1 clicks down to lock the device in position.

Note that the Secondary (Optional) Device Bay supports parallel (PATA) hard disks only.

Figure 6 - 7 Secondary (Optional) Bay Device Removal
Upgrading the Processor

If you want to upgrade your computer by replacing the existing processor with a faster/new one you will need to contact your customer service representative. We recommend that you do not do this yourself, since if it is done incorrectly you may damage the processor or mainboard.

Warranty

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.

Unauthorized tampering with the HDD may also violate your warranty.
Chapter 7: Modules

Overview

This chapter contains the information on the various modules (some of which are optional) which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

The chapter includes information on the following:

- The Mini-PCI WLAN Module Options
- The Bluetooth Module
- The 7-in-1 Card Reader Module
- The TV Tuner Module
- The PC Camera Module Options
The Mini-PCI WLAN Module Options

If your purchase option includes any of the Wireless LAN module options, follow the information on the following pages for instructions on installing the driver. Pay careful attention to the warnings concerning the use of wireless modules aboard aircraft, and the instructions on enabling/disabling power to the modules.

Before installing the Wireless LAN driver, make sure that the optional WLAN module is on (the LED will be green).

Use the WLAN AP-key button (see “AP-key Buttons” on page 1 - 9) to toggle power to the Wireless LAN module (make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 6).

You will be provided with the appropriate driver CD for your module (MSI 6855A 802.11b/g or ZCOM 802.11 a/b/g). Insert the CD and follow the installation procedure listed on the following pages.
MSI 6855A (802.11b/g) Wireless LAN Driver Installation

1. Insert the *WLAN CD-ROM* into the CD/DVD drive.
2. The program will run automatically.
3. Click **Install Software** and click **Next**.
4. Click the button to accept the license agreement, then click **Next**.
5. Click **Install**.
6. Click **Finish** and exit the install screen.
7. Access any available wireless networks from **Network Connections** control panel in *Windows* (see sidebar).

The **INPROCOMM Wireless LAN Configuration Utility** may be run from the **Start** menu (**Start** > **Programs/All Programs** > **Wlan** > **WLAN Configuration Utility**), and may then be accessed from the icon in the taskbar.

*Figure 7-1*
INPROCOMM WLAN Utility
ZCOM (802.11a/b/g) WLAN Module Driver Installation

1. Insert the *WLAN CD-ROM* into the CD/DVD drive.
2. Click *Start (menu) > Run...* and navigate (*Browse..*) to *D:\Utility\SETUP.exe* and click *OK*.
3. Click *Next > Next > Finish* to complete the installation.
4. Access any available wireless networks from *Network Connections > Wireless Network Connection* menu in *Windows* (see sidebar), or click the icon in the taskbar, and click *View Wireless Connections*.
The Bluetooth Module

Before installing the Bluetooth driver, make sure that the optional Bluetooth module is on. Use the Bluetooth AP-key button to toggle power to the Bluetooth module. Make sure you install the drivers in the order indicated in Table 4-1, on page 4-6.

Bluetooth Module Driver Installation

1. Insert the Bluetooth CD-ROM into the CD/DVD drive.
2. The program will run automatically.
3. Click Install (button).
4. Click the button to accept the license agreement, then click OK.
5. Click Yes to restart the computer.
6. Double-click the Bluetooth icon in the taskbar to bring up the Add New Connection Wizard (the Wizard will search and find any available Bluetooth devices).
7. Double-click the Bluetooth Information Exchanger icon on the desktop to bring up the control panels.
8. Access the Bluetooth Utility User Guide from the Bluetooth > Help menu in the Bluetooth Information Exchanger (see Figure 7-3).
9. The Bluetooth Utility User Guide and Bluetooth Settings etc. may also be accessed from the Start menu (Start > Programs/All Programs > Bluetooth).

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Wireless Device Operation Aboard Aircraft

Use the AP-Key button to toggle power to the Bluetooth module.
Figure 7-3
Bluetooth Control Panels/Help
(Windows XP)
The 7-in-1 Card Reader Module

This optional card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device. The following formats can be read by the card reader:

- MMC (MultiMedia Card)
- SD (Secure Digital)
- MS (Memory Stick)
- MS (Memory Stick Pro)
- SM (SmartMedia Card)
- CF (Compact Flash Types I & II)
- MD (IBM Microdrive)

The cards will appear as removable disks on the computer and can be accessed in the same way as your hard disk(s).

Removing Cards

To remove any inserted cards, click the Safely Remove Hardware icon in the Windows taskbar and follow the instructions on page 2 - 7 in order to prevent system errors (DO NOT PULL THE CARD OUT OF THE SLOT).

Card Reader Cover

Make sure you keep the cover in the card reader when not in use. This will help prevent foreign objects and/or dust getting in to the card reader.
The TV Tuner Module

The optional TV Tuner allows you to watch TV, play music CDs, video conference and capture still images and video on your PC.

The TV Tuner comes with a remote control unit, cable and a CD containing the utility software. Make sure you install the application(s) from any CDs provided, then consult the guide for full instructions on how to use the TV Tuner and software.

The CATV-In jack will only be enabled when the TV Tuner module is installed. Make sure you install the software before connecting the cable.

Figure 7 - 5
TV Tuner Ports
1. CATV Jack
2. CATV Cable
3. Consumer IR Transceiver
4. Remote

TV Tuner Remote
The remote control unit provided with the optional TV Tuner will only function when the computer is powered from the AC adapter, and not while the computer is powered by the internal battery.

Point the remote at the consumer IR transceiver to change channels etc.
Installing the AverTV Utility Software

1. Insert the *AverTV Utility CD-ROM* into the CD/DVD drive.
2. Click *TV Utility Software*.
3. Click Yes > Next > Next (click Cancel if asked a *Found New Hardware Wizard* appears).
4. Click Finish.
5. Run the program from the Start > Programs/All Programs > AVer TV menu, and select the Aver TV program, or double-click the icon on the desktop.

Insert the *AverTV Utility CD-ROM* and click Acrobat Reader 5.1 (button) to install the program (if you have not already done so) to read the AVerTV User Guide. The guide is accessible from the Start > Programs/All Programs > AVer TV menu.

Installing the InterVideo WinDVD 4 Software

1. Insert the *InterVideo WinDVD CD-ROM* into the CD/DVD drive.
2. Click Next > Yes.
3. Type in the serial number and click Next > ....... Next.
4. Click Finish.
5. Run the program from the Start > Programs/All Programs > InterVideo WinDVD 4 menu, and select the InterVideo WinDVD 4 program, or double-click the icon on the desktop.
The PC Camera Module Options

If your purchase includes one of the *optional* PC Cameras you will need to install the device driver for it as indicated on the following pages.

Before installing the PC Camera driver, make sure that the *optional* PC Camera module is on. Use the PC Camera AP-key button (see “AP-key Buttons” on page 1 - 9) to toggle power to the PC Camera module (make sure you install the drivers in the order indicated in *Table 4 - 1, on page 4 - 6*).
Kenmec PC Camera Driver Installation (WinXP)
1. Insert the *PC Camera CD-ROM* into the CD/DVD drive.
2. Click *Start* (menu) > *Run...* and navigate (*Browse..*) to D:\Setup.exe and click *OK*.
3. Choose the language you prefer and click *OK > Next*.
4. Click *Finish* to complete the installation.
5. Run the *BisonCap* application software from the *Bs350u2* shortcut on the desktop, or from the *Bs350u2* item in the *Start > Programs/All Programs* menu (give the computer time to find the hardware).

Sertek PC Camera Driver Installation (WinXP)
1. Insert the *PC Camera CD-ROM* into the CD/DVD drive.
2. The program will run automatically.
3. Click *Install Products*.
4. Choose the language you prefer and click *OK*.
5. Click *Next*.
6. Click *Finish* to complete the installation (a *Found New Hardware* bubble will appear at the bottom of the screen).
7. Run the *BisonCap* application software from the *Bs350u2* shortcut on the desktop, or from the *Bs350u2* item in the *Start > Programs/All Programs* menu (give the computer time to find the hardware).
PC Camera Audio Setup

If you wish to capture video & audio with your camera, it is necessary to setup the audio recording options in Windows.

1. Go to the Start menu and point to Settings (or just click Control Panel) and click Control Panel, then double-click the Sounds & Audio Devices icon (Sounds, Speech, and Audio Devices in Category View).
2. Click Advanced in the Device volume tab.
3. Click Options and scroll down and click Properties.
4. Select Realtek HD Audio rear input from the Mixer Device menu.
5. Click Microphone (check box) if it is not checked, then click OK.
6. Make sure the Select (check box) in the Recording Control panel, under the Microphone section, is checked (boost the volume as high as it will go).
7. Close the window, then click OK.

Taking Still Pictures

You may take still pictures in the Windows XP operating system only.

Double-click the My Computer icon on the desktop, or go the Start menu and point to My Computer, then click it.

Double-click the BisonCam, USB2.0 icon.

Click Take a new picture in the Camera Tasks box.

7 - 12 The PC Camera Module Options
Audio Setup (Windows XP)

Figure 7 - 6
BisonCap

BisonCap is a video viewer useful for general purpose video viewing and testing, and can capture video files to .avi format.

1. Run the BisonCap program from the Start > Programs/All Programs > Bs350u2 menu (it is recommended that you set the capture file before the capture process - see Set Capture File below).
2. Go to the Capture menu heading (if you wish to capture audio make sure that the Capture Audio option is ticked) and select Start Capture.
3. On the first run of the program (if you have not set the captured file) you will be asked to choose a file name and size (see the sidebar - Pre-Allocating File Space) for the captured file. Click Start Capture again.
4. Click OK to start capturing the video, and press Esc to stop the capture.
5. If you wish to, you may go to the File menu and select Save Captured Video As..., choose a file name and location, then click Open (you can view the file using the Windows Media Player).

Set Capture File

In BisonCap program you will only be asked to set the capture file name on the first run of the program. When you run the program the next time the file will automatically be overwritten with the newly captured file. To avoid overwriting files you can go to the Set Capture File.. option in the File menu, and set the file name and location before capture. Set the name and location then click Open (you can choose Cancel to ignore the file size if prompted).
Eliminating Screen Flicker
If you find that the video screen in the BisonCap program is flickering, you can try to adjust the setting in the Video Capture Filter options.

1. Run the BisonCap program.
2. Go to Options and scroll down to select “Video Capture Filter...”.
3. Click either 50Hz or 60Hz under Frequency in Property Page (tab).
Chapter 8: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a power strip, make sure it is actually working. Check the LED Power Indicators (see “LED Indicators” on page 1 - 8) to see the computer’s power status.

- **Connections** - Check all the cables to make sure that there are no loose connections anywhere.

- **Power Savings** - Make sure that the system is not in Hibernate or Standby mode by pressing the keys configured in your Power Management/Power Options (see “Configuring the Power Button” on page 3 - 8), the Fn + F4 key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the Fn + F8 and F9 keys to adjust the brightness.

- **Display Choice** - Press Fn + F7 to make sure the system is not set to “external only” display (see “Function Key Combination” on page B - 7/C - 5).

- **Boot Drive** - Make sure there are no floppy disks in any connected drive when you start up your machine (this is a common cause of the message “Invalid system disk - Replace the disk, and then press any key” / “Remove disks or other media. Press any key to restart”).
Backup and General Maintenance

- Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

- Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Boot** password for the SCU (see “Security Menu” on page 5 - 11).

- Keep copies of vital **settings files** such as network, dialup settings, mail settings etc. (even if just brief notes).

---

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Boot Floppy Disk” or “Bootable CD-ROM” (this disk provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Troubleshooting

Upgrading and Adding New Hardware/Software

• Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

• Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

• Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

• When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

• Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

- Thoroughly check any recent changes you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; Example - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.
## Troubleshooting

### Power

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You turned on the power but it doesn’t work.</td>
<td><strong>Battery missing / incorrectly installed.</strong> Check the battery bay, make sure the battery is present and seated properly (the design of the battery only allows it to go in one way). Make sure there’s nothing interfering with the battery contacts.</td>
</tr>
<tr>
<td>The Battery <strong>LED power indicator</strong> :<a href="image"></a>, is blinking orange.</td>
<td><strong>Low Battery.</strong> Plug in the AC power source. If the computer doesn’t start up immediately, turn it off then on again.</td>
</tr>
<tr>
<td>You are losing battery power too quickly.</td>
<td><strong>The system is using too much power.</strong> If your OS has a <strong>Power Options</strong> scheme (see “<strong>Power Schemes</strong>” on page 3 - 4) check its settings. You may also be using a PC Card device that is drawing a lot of power.</td>
</tr>
</tbody>
</table>
| Actual battery operating time is shorter than expected.     | **The battery has not been fully discharged before being recharged.** Make sure the battery is fully discharged and recharge it completely before reusing (see “**Battery Information**” on page 3 - 9).  

**Power Options have been disabled.** Go to the **Control Panel** in Windows and re-enable the options.  

**A peripheral device or PC Card is consuming a lot of power.** Turn off the unused device to save power. |
## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The computer feels too</td>
<td>Make sure the computer is properly ventilated and the vents/fan intakes are not blocked. If this doesn’t cool it down, put the system into <strong>Hibernate</strong>*</td>
</tr>
<tr>
<td>hot.</td>
<td>mode or turn it off for an hour. Make sure the computer isn’t sitting on a thermal surface (see “<strong>Overheating</strong>” on page 1 - 11). Make sure you’re using the correct adapter.</td>
</tr>
<tr>
<td></td>
<td>Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the vents/fan intakes to be blocked.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### Display

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
</table>
| Nothing appears on screen. | *The system is in a power saving mode.* Toggle the sleep/resume key combination, **Fn + F4** (see “Sleep Button” on page 3 - 8).  
*The screen controls need to be adjusted.* Toggle the screen control key combinations **Fn + F8/F9**. If you’re connected to an external monitor, make sure it’s plugged in and turned on. You should also check the monitor’s own brightness and contrast controls.  
*The computer is set for a different display.* Toggle the screen display key combination, **Fn + F7** (see “Function Key Combination” on page B - 7/C - 5). If an external monitor is connected, turn it on.  
*The screen saver is activated.* Press any key or touch the **TouchPad**. |
| No image appears on the external monitor I have plugged in and powered on. | You haven’t installed the video driver and configured it appropriately from the **Control Panel**. See “What to Install” on page 4 - 1 for instructions on installing the driver, and see “NVIDIA Video Driver Controls” on page B - 1 or “ATI Video Driver Controls” on page C - 1 for instructions on configuring the video driver. |
# Troubleshooting

## Boot Password

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You forget the boot password.</td>
<td><em>If you forget the password, you may have to discharge the battery of the CMOS. Contact your service representative for help.</em></td>
</tr>
</tbody>
</table>

#### Password Warning

If you choose to set a boot password, **NEVER** forget your password. The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
## Audio & CD Device

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The sound cannot be heard or the volume is very low.</td>
<td><em>The volume might be set too low.</em> Check the volume control in the <strong>Volume Control Panel</strong> in the <em>Windows</em> taskbar, or use the key combination <code>Fn + F5</code> and <code>F6</code> (see “Audio Features” on page 2 - 12) to adjust.</td>
</tr>
<tr>
<td>The compact disc cannot be read.</td>
<td><em>The compact disc is dirty.</em> Clean it with a CD-ROM cleaner kit.</td>
</tr>
<tr>
<td>The compact disc tray will not open when there is a disc in the tray.</td>
<td><em>The compact disc is not correctly placed in the tray.</em> Gently try to remove the disc using the eject hole (see “Loading Discs” on page 2 - 3).</td>
</tr>
<tr>
<td>The DVD regional codes can no longer be changed.</td>
<td><em>The code has been changed the maximum 5 times.</em> See “DVD Regional Codes” on page 2 - 5.</td>
</tr>
<tr>
<td>The Audio &quot;DJ&quot; CD Player will not turn on (nothing appears on the LCD of the player).</td>
<td><em>The computer is turned ON</em> (see “Audio &quot;DJ&quot; CD Player” on page 2 - 13). Check your computer is not turned on (or running in a power saving mode), and if it is, then shut it down and toggle the ON/OFF switch on the CD Player.</td>
</tr>
</tbody>
</table>
# Troubleshooting

## Keyboard

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unwelcome numbers appear when typing.</td>
<td>If the LED 🔄 is lit, then Num Lock is turned ON (see “LED Indicators” on page 1 - 8).</td>
</tr>
</tbody>
</table>

### Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot keys unique to the system’s regular keyboard may not work.
## Troubleshooting

### Operation 8 - 13

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The system freezes or the screen goes dark.</td>
<td><em>The system’s power saving features have timed-out.</em> Use the AC adapter, press a key on the keyboard, or press the sleep <em>(Fn + F4)</em> key combination, or press the power button if no LEDs are lit.</td>
</tr>
<tr>
<td>The system never goes into a power saving mode.</td>
<td><em>Power Options features are not enabled.</em> Go to the Windows Power Options menu and enable the features you prefer (see “System Power Options” on page 3 - 6). Make sure you have enabled Hibernate mode from the control panel.</td>
</tr>
<tr>
<td>A blue screen has appeared when I remove a card from the card reader.</td>
<td><em>The card has been removed without first using the Safely Remove Hardware icon in the Windows taskbar.</em> Follow the instructions on page 2 - 7 in order to prevent system errors (DO NOT PULL THE CARD OUT OF THE SLOT).</td>
</tr>
</tbody>
</table>

</table>
Appendix A: Interface (Ports & Jacks)

Overview

The following chapter will give a quick description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
## Ports and Jacks

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Built-In Microphone</td>
<td>The built-in microphone allows you to record on your computer</td>
</tr>
<tr>
<td>CATV-In Jack</td>
<td>Use this jack to connect a CATV cable if you have included the <strong>optional</strong> Mini-PCI TV Tuner in your purchase.</td>
</tr>
<tr>
<td>DC-In Jack</td>
<td>Plug the supplied AC adapter into this jack to power your computer.</td>
</tr>
<tr>
<td>DVI-Out Port</td>
<td>The DVI-Out (Digital Visual Interface) Port allows you to connect an external monitor, or Flat Panel Display, to allow dual video or simultaneous display on the LCD and external monitor/FPD. If you are using an older type of monitor you will need to use a converter to convert the signal from DVI to VGA.</td>
</tr>
<tr>
<td>Headphone-Out Jack</td>
<td>Headphones or speakers may be connected through this jack. <strong>Note:</strong> Set your system’s volume to a reduced level before connecting to this jack.</td>
</tr>
<tr>
<td>Line-In Jack</td>
<td>The Line-In jack allows you to play audio sources through the computer’s speakers.</td>
</tr>
</tbody>
</table>

<tr>
<td>S-Video-Out Port</td>
<td>Connect your television to your computer and view DVDs, VCDs or anything else your computer can display. You will need an S-Video cable to make the connection. Enable this port from the video driver controls.</td>
</tr>
<tr>
<td>USB 2.0/1.1 Ports</td>
<td>These USB 2.0 compatible ports (USB 2.0 is fully USB 1.1 compliant) are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device).</td>
</tr>
</tbody>
</table>
Appendix B: NVIDIA Video Driver Controls

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 16.

NVIDIA Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 6.

1. Run the Notebook Driver Installation application and double-click VIDEO.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\05NVIDIA\setup.exe and click OK.
2. To continue click Next (click Continue Anyway/Yes if asked if you want to continue at any time).
3. Click Finish to restart the computer.

Video Card Options

This computer features two different (NVIDIA GeForce 6800 or ATI M28) PCI Express video card options (see “Video Card Options” on page E - 3).

If you are unsure which video card your model features, then go to the BIOS and check “VGA Card:” under System Information in the Advanced menu (see “System Information” on page 5 - 8).
NVIDIA Display Properties

More advanced video configuration options are provided in the NVIDIA Display Properties control panel tab. NVIDIA GeForce 6800 video cards will display the title NVIDIA GeForce Go 6800 Properties:

1. Open the Display Properties (see “Video Features” on page 1 - 16) control panel.
2. Click Advanced (button).
3. Click GeForce Go 6800 (tab).
4. Clicking the Additional Properties options allows you to make any video adjustments required.

NVIDIA Taskbar Icon

Click the NVIDIA icon in the taskbar to bring up the troubleshooting menu, and go to the GeForce Go 6800 Properties from the menu (click NVIDIA Display > Laptop Display).

If you cannot see the tray icon, go to the GeForce Go 6800 Properties control panel tab and select the Troubleshooting item from the Additional Properties menu. Click the tickbox “Display the NVIDIA Settings icon in the taskbar”.

GeForce Go 6800 Properties from Desktop

To access the GeForce Go 6800 Properties from the desktop:

1. Right-click the desktop.
2. Point to NVIDIA Display and click Laptop Display.
**Additional Properties**

The items listed in the **Additional Properties** window allow you to configure your display(s). If the items do not display you can either click the **Additional Properties** button, or click the icon.

Some screen examples are shown on the following page.
You may make changes to the Display Settings, Color Correction, Video Overlay, Resolutions, Refresh Rates and Screen Rotation by clicking the appropriate tab and adjusting the setting.

**Figure B - 2**
Screen Examples

Right-click on a control panel item to bring up a Help menu (see sidebar).

**Help Menus**
Right-click on many of the items in the tabs to bring up the “What’s This?” button.

Click the “What’s This?” button to bring up the help menu.
NVIDIA nView Desktop Manager

The nView Desktop Manager allows quick access to control panels for features such as Desktop Management, Profiles, Hot Keys etc. The Control panel may be accessed as follows.

1. Click Start, point to Settings and click Control Panel (or just click Control Panel).
2. Double-click NVIDIA nView Desktop Manager (icon) - Click "Switch to Classic View" from the left of the menu if you are in Category View.

The Display Wizard helps you to quickly configure any attached displays.

Right-click the Enable button to display the Desktop Management options menu.

nView Desktop Manager from Additional Properties

You can view the nView Desktop Manager control panels from the Additional Properties window.

Select Additional Properties from the GeForce Go 6800 Properties. Click the Desktop Management window and click the Enable button to display the options.

Figure B - 3
Desktop Manager Control Panel
Display Devices

Besides the built-in LCD, you can also use an external monitor/flat panel display or TV/HDTV as your display device. The following are the display options:

1. The built-in LCD.
2. An external monitor connected to the DVI-Out Port (may require DVI to VGA converter).
3. A flat panel display connected to the DVI-Out Port (may require DVI to VGA converter).
4. A TV/HDTV (HDTV requires an HDTV converter) connected to the S-Video-Out Port.

Display Wizard

Use the Display Wizard in the Desktop Management window to quickly setup and configure any attached displays (see Figure B - B - 3 on page B - 5).

Monitor and TV Tuner

If you are connecting both a monitor/flat panel display to the DVI-Out Port, and a cable/aerial to the optional TV Tuner module, make sure you attach the cable/aerial to the TV Tuner first, then the monitor.
Attaching Other Displays

If you prefer to use a monitor or flat panel display, connect it to the DVI-Out Port at the rear of the computer.

1. Attach your external monitor to the DVI-Out Port (or TV/HDTV to the S-Video-Out Port), and turn it on.
2. Go to Additional Properties in the GeForce Go 6800 Properties control panel tab (“NVIDIA Display Properties” on page B - 2).
3. Select nView Display Settings (available if external display is attached).
4. Select the display mode from the nView Display Mode drop box.
5. Select Apply.
6. Click Yes to confirm the settings.

Function Key Combination

You can use the Fn + F7 key combination to toggle through the display options:

- Notebook Only
- External Display Only
- Notebook + External Display

Make sure you give the displays enough time to refresh.

Figure B - 4
nView Display Settings
7. Select the display option from the **Primary Display/ Secondary Display** dropbox. If you have a TV and external monitor/flat panel display attached you will have a number of available options (see sidebar). Select and **Apply** the appropriate option.

8. Click the monitor icon to select it, then click the **Device Settings** button to make any adjustments for the selected display (including **Screen Resolutions & Refresh Rates**).

9. Click **Apply** to confirm any setting changes.
Display Modes

**Single Display Mode**
Only one of your displays is used.

**Clone Mode**
Clone Mode simply shows an exact copy of the Primary display desktop on the other display(s). This mode will drive multiple displays with the same content and each display device can be configured independently.

**Dualview Mode**
Dualview Mode treats both connected displays as separate devices, and they act as a virtual desktop resulting in a large workspace. When Dualview is enabled, you can drag any icons or windows across to the other display desktop. It is therefore possible to have one program visible in one of the displays, and a different program visible in the other display.

**Horizontal/Vertical Span Mode**
Horizontal/Vertical Span Mode treats both connected displays as a virtual desktop. Unlike Dualview, in Horizontal/Vertical Span Mode the displays are not treated as separate devices and the taskbar will be stretched across the displays. 3D applications are accelerated more efficiently in Horizontal/Vertical Span Mode.

Display Wizard
Use the Display Wizard in the Desktop Management window to quickly setup and configure any attached displays (see Figure B - B - 3 on page B - 5).
Enabling TV Display

To display desktop images on a TV, connect the TV to your computer by using an S-Video cable from the TV to the S-Video-Out Port at the rear of the computer (see “System Map: Front & Rear Views” on page 1 - 11).

You will need to enable the TV display from the nView Display Settings tab (see “Attaching Other Displays” on page B - 7). The TV will appear as a display option (select the display option from the Primary Display/Secondary Display dropdown) when attached to the S-Video-Out Port.

To get a full range of options from the Device Settings menu click the Detect Displays button. Click to select the TV icon, then click the Device Settings button.
Set the TV format from the Select TV Format menu. The Advanced option (in Dualview mode) at the bottom of the Select TV Format menu allows you to select TV format by country if you are unsure of your TV format.

**Device Adjustments** (Device Settings menu) allows you to make changes to the TV output.

*Figure B - 7*  
TV Settings and Adjustments
Appendix:C: ATI Video Driver Controls

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 16.

ATI Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 6.

1. Run the Notebook Driver Installation application and double-click VIDEO.
   OR
   Click Start (menu) > Run... and navigate (Browse..) to D:\Drivers\05ATI\Setup.exe and click OK.
2. To continue click Next > Yes > Express (click Continue Anyway/Yes if asked if you want to continue at any time).
3. Click Finish to restart the computer.

Video Card Options

This computer features two different (NVIDIA GeForce 6800 or ATI M28) PCI Express video card options (see “Video Card Options” on page E - 3).

If you are unsure which video card your model features, then go to the BIOS and check “VGA Card” under System Information in the Advanced menu (see “System Information” on page 5 - 8).
ATI Video Driver Controls

ATI Mobility Radeon X800 Properties

More advanced video configuration options are provided in the ATI Mobility Radeon X800 control panel tab:

1. Open the Display Properties (see “Video Features” on page 1 - 16) control panel.
2. Click Advanced (button).
3. Clicking any of the ATI Mobility Radeon X800 tabs (see the examples in Figure C - 2) will allow you to make any video adjustments required.
4. You can also access the ATI Mobility Radeon X800 from the ATI icon in the taskbar (see the sidebar and Figure C - 1).

Figure C - 1
ATI Menus (taskbar Icon)
Help Menus
Right-click on almost any item in the tabs to bring up the “What’s This?” button.
Click the “What’s This?” button to bring up the help menu.

Theater Mode
Theater Mode is not supported with the TV Tuner module installed (see page C - 4).
Display Devices
Besides the built-in LCD, you can also use an external monitor/flat panel display or TV/HDTV as your display device. The following are the display options:

1. The built-in LCD.
2. An external monitor connected to the DVI-Out Port (may require DVI to VGA converter).
3. A flat panel display connected to the DVI-Out Port (may require DVI to VGA converter).
4. A TV/HDTV (HDTV requires an HDTV converter) connected to the S-Video Out Port.

Theater Mode
Theater Mode can be enabled by clicking Clone Mode Options (button) in the Overlay tab from the ATI Mobility Radeon X800 Properties. (see page C - 3). Theater Mode enables you to display video playback in full screen on a secondary monitor.

Theater Mode is not supported if you have the TV Tuner module installed.

Monitor and TV Tuner
If you are connecting both a monitor/flat panel display to the DVI-Out port, and a cable/aerial to the optional TV Tuner module, make sure you attach the cable/aerial to the TV Tuner first, then the monitor.
Attaching Other Displays

If you prefer to use a monitor or flat panel display, connect it to the DVI-Out Port at the rear of the computer.

1. Attach your external monitor to the DVI-Out Port (or TV/HDTV to the S-Video Out Port), and turn it on.
2. Select the Displays tab in the ATI Mobility Radeon X800 properties.
3. Click the enable/disable button for the display device you wish to use.
4. Click Apply.
5. Click Yes to accept the settings and OK to save the changes.

6. Select One display as Primary, the remaining as the Clone (the Clone may operate in either Clone Mode, or Extended Desktop Mode).

Function Key Combination

You can use the Fn + F7 key combination to toggle through the display options:

- Notebook Only
- External Display Only
- Notebook + External Display

Make sure you give the displays enough time to refresh.

Figure C - 3
Display Settings
Display Modes

Single
Only one of your displays is used.

Multiple - Clone Mode
Clone Mode simply shows an exact copy of the Primary display desktop on the other display(s). This mode will drive multiple displays with the same content and each display device can be configured independently.

Multiple - Extended Desktop Mode
Extended Desktop mode treats both connected displays as separate devices, and they act as a virtual desktop resulting in a large workspace. When enabled, you can drag any icons or windows across to the other display desktop. It is therefore possible to have one program visible in one of the displays, and a different program visible in the other display.

Primary & Clone Displays
The Primary display in an Extended Desktop environment will be associated with display Icon 1 in the settings tab.

The Clone display will set the associated display to show a copy of the Primary desktop.

The Clone display in an Extended Desktop environment will show the portion of the desktop extended from the Primary display.
Clone Mode
Clone Mode simply shows an exact copy of the Primary display desktop on the other display(s). This mode will drive multiple displays with the same content. Use this feature to display the screen through a projector for a presentation. Each display device can be configured independently as this allows you to set the options for overhead projectors etc., which require specific resolutions and refresh rates. Click on the bar of the device in question to bring up the configuration options.

Display Data Channel Information
Click the “Use DCC Information” button to disable/enable DCC. DCC is a data channel used by newer monitors to provide information (e.g. maximum resolution and refresh rates) to the video adapter. Different monitors support different resolutions and refresh rates (you will need to experiment for the best setting).

Figure C - 4
Monitor Properties
Extended Desktop Mode

The system supports Extended Desktop in multiple display environments in Windows XP. An Extended Desktop creates a desktop spanning multiple displays and acts as a large workspace.

To get this effect:

1. Attach your external monitor to the DVI-Out port (or TV/HDTV to the S-Video Out Port), and turn it on.
2. Select the Displays tab in the ATI Mobility Radeon X800 properties.
3. Click the enable/disable button for the display device you wish to use.
4. Click Apply.
5. Click Yes to accept the settings and OK to save the changes.
6. Use the Display Properties (see “Extended Desktop Monitor Arrangement” on page C - 9) window to select the second monitor by clicking on the icon, or select it from the “Display:” pop-up menu.
7. Click “Extend my Windows desktop onto this monitor.”
8. Click Apply > OK.
9. Use the Display Properties control panel to drag the monitors to match the physical arrangement you wish to use.
10. In the example shown in Figure C - 5 the primary monitor is on the left, the other display is on the right.

![](image)

Click either the Display pop-up menu, or click the icon for the appropriate display. Then click the tick box to extend the primary display’s desktop to it.

11. With the **Extended Desktop Mode** enabled, drag any icons or windows across to the other display desktop. It is therefore possible to have one program visible in one of the monitors, and a different program visible in the other monitor.
ATI Video Driver Controls

12. One display will be set to 1 (Primary). The displays may be switched as long as one as set to Primary.

13. To switch from Extended Desktop mode back to Clone mode, first uncheck the tick box to disable the Extended Desktop (via the settings tab in the Display Properties control panel - Figure C - 5) and click Apply.

14. Repeat the procedure in “Attaching Other Displays” on page C - 5 (make sure you have selected the appropriate display to get all the ATI Mobility Radeon X800 options tabs) to return to Clone mode (click the button to enable any displays if necessary).
Enabling TV Display

To display desktop images on a TV, connect the TV to your computer by using an S-Video cable from the TV to the S-Video-Out Port at the rear of the computer (see “System Map: Front & Rear Views” on page 1 - 11).

Further help is available to help you troubleshoot your TV connection through the menus accessed from the taskbar (see page Figure C - 1 on page C-2).

Figure C - 7
TV Properties
Appendix D: 1.8" Top Case LCD

The 1.8" TFT Top Case LCD can be used to display company logos, personal photos, animated files etc. The following file formats are supported:

- 24 bit depth Bitmap (.bmp) files which are 128 pixel wide * 160 pixel high
- 32 bit depth GIF or animated .GIF files which are 128 pixel wide * 160 pixel high

Flash 1.8" LCD Top Case & Battery Power

The 1.8" LCD will remain on even if the computer is shut down (and will thus draw power from the battery). Power to the 1.8" LCD may be toggled on/off by touching the metal rim which runs around the LCD. Make sure you turn off the LCD after shutting down the computer.

Figure D - 1
1.8" LCD Power On/Off
Before using the application (LCDAP.EXE) provided on the *Device Drivers and Utilities CD-ROM* to program the files displayed on the 1.8" LCD, you must enable the setting in the BIOS:

1. Restart the computer and press **F2** at startup to enter the BIOS.
2. Use the cursor keys to move to and select the **Advanced** menu.
3. Use the cursor keys to move to and select I/O Device Configuration menu.
4. Select the **Flash Top Case Logo** item and press **Enter** to change the setting to **Enabled** (see sidebar note).
5. Press **F10** to save the settings and exit the program.

**Flash Top Case Logo**

This BIOS item allows you to enable the serial port for application programming of the top case logo. After programming the logo make sure you reset the option to "**Disabled**" (default) otherwise the serial port will not work.

**Figure D - 2**

BIOS Advanced Menu > I/O Device Configuration

**BIOS Menus**

The BIOS menus shown are for *reference* only. Your computer's menus will indicate the configuration appropriate for your model and options (and are subject to update).
Using the LCDAP Program

Your computer may already come with LCDAP.EXE pre-installed on the hard disk (e.g. on the C: drive). Where this is not the case, or where you are re-configuring your computer the LCDAP.EXE is provided on the *Device Drivers and Utilities CD-ROM*:

1. Run the Notebook Driver Installation application and double-click **LCDAP**.
   OR
   Click **Start** (menu) > **Run...** and navigate (**Browse..**) to **D:\Drivers\10LCDAP\LCDAP.exe** and click **OK**.
2. If you wish to copy the application to the hard disk make sure you copy the whole **10LCDAP** folder to your hard disk (e.g. C: drive).

![Figure D - 3](Figure D - 3
LCDAP Folder)
1.8" Top Case LCD

Browse to the LCDAP folder on the computer’s hard disk and double-click LCDAP (.EXE) to run the program.

Figure D - 4
LCDAP Application
LCDAP Files
There are 12 slots available for user files in the LCADAP program, and one fixed slot display the manufacturer’s logo.

Adding Files
1. To add a file click on any of the 12 slots to select it, and click Open File (button), or double-click on any empty slot, or right-click a slot or file.
2. Select a file and click Open to add the file to the slot (files may be replaced but not deleted).

Transition Type
The Type box lists four types of transiting for selected slides. Type 0 ~ 3 transitions are reserved for bitmap files, and Type 3 is for GIF files.
You can check the final display result by clicking the Preview button.

Figure D - 5
Adding & Selecting Files
Selecting & Configuring Files to Display

1. To select files to display double-click the file to highlight it (it will be outlined in blue).
2. You can select up to 12 files to display, however this is dependent upon the file size (a maximum of 512 Kbytes of files may be selected).
3. The selected picture size will be displayed in blue at the bottom of the screen (if the total size of selected files exceeds 512 Kbytes the text will change to red and you will need to deselect files to turn the text back to blue).
4. When a file is selected you can adjust the slide transition type from the **Type** box (see sidebar).
5. The transition speed of each slide (in tenths of a second) for each slide may be set in the **Speed** box.
6. The delay between the slides (in hundredths of a second) may be set in the **Delay** box.
7. The final result of any changes may be checked by using the **Preview** button.
8. When you are satisfied with the final configuration result click the **Update Picture** button and give the program time to update.
9. Click **Exit** to quit the program.
Appendix E: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed or updated due to the manufacturer's release schedule. Check with your service center for details.
