Preface

FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Re orient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the service representative or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

Warning

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.

If your purchase option includes both Wireless LAN and 3.75G modules, then the appropriate antennas will be installed. Note that in order to comply with FCC RF exposure compliance requirements, the antenna must not be co-located or operate in conjunction with any other antenna or transmitter.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit with an AC Input of 100 - 240V, 50 - 60Hz, DC Output of 19V, 3.42A OR 18.5V, 3.5A (65 Watts) minimum AC/DC Adapter.

This Computer's Optical Device is a Laser Class 1 Product
Instructions for Care and Operation
The computer is tough, but it can be damaged. To prevent this, follow these suggestions:

1. **Don't drop it, or expose it to shock.** The tough magnesium alloy case and shock mounted design will help the computer resist shocks, bumps and small drops but if the computer falls, the case and the components could still be damaged so try and this situation.
   - Do not place it on an unstable surface.
   - Do not place anything heavy on the computer

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. The computer is spill resistant, but as with any electrical appliance, contact with water is to be avoided.
   - Do not expose it to excessive heat.
   - Do not leave it in a place where foreign matter or moisture may affect the system.
   - Don’t store the computer in a humid environment.

3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.
   - Do not turn off the power until you properly shut down all programs.
   - Do not turn off any peripheral devices when the computer is on.
   - Do not disassemble the computer by yourself.
   - Perform routine maintenance on your computer.

5. **Take care when using peripheral devices.**
   - Use only approved brands of peripherals.
   - Unplug the power cord before attaching peripheral devices.
Preface

Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

<table>
<thead>
<tr>
<th>Do not plug in the power cord if you are wet.</th>
<th>Do not use the power cord if it is broken.</th>
<th>Do not place heavy objects on the power cord.</th>
</tr>
</thead>
</table>
Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not remove any batteries from the computer while it is powered on.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Preface

Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Servicing
Do not attempt to service the computer yourself. Doing so may violate your warranty and expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

• When the power cord or AC/DC adapter is damaged or frayed.
• If the computer has been exposed to rain or other liquids.
• If the computer does not work normally when you follow the operating instructions.
• If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
• If there is an unusual odor, heat or smoke coming from your computer.

Removal Warning
When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before turning the computer on.
Travel Considerations

Packing
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it’s latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your documents are prepared.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the vent(s)/fan intake(s)/outlet(s) to be blocked. To prevent your computer from overheating make sure nothing blocks the vent(s)/fan intake(s)/outlet(s) while the computer is in use.
On the Road

In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

Hand-carry the notebook - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with normal luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

Beware of Electromagnetic fields - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). Note: Some airports also scan luggage with these devices.

Fly safely - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

Get power where you can - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

Keep it dry - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

**Remember to:**
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Lighting
Proper lighting and comfortable display viewing angle can reduce eye strain and muscle fatigue in your neck and shoulders.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

LCD Screen Care
To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

- Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
- Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
- Rotate desktop background images every few days.
- Turn the monitor off when the system is not in use.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- **Chapter 2** A guide to using some of the main features of the computer e.g. the storage devices (hard disk, optical device, 7-in-1 card reader, ExpressCard/34/54), Touchpad & Mouse, Audio Features, Tablet PC Options & Printer.
- **Chapter 3** The computer’s power saving options.
- **Chapter 4** The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
- **Chapter 5** An outline of the computer’s built-in software or BIOS (Basic Input Output System).
- **Chapter 6** Instructions for upgrading your computer.
- **Chapter 7** A quick guide to the computer’s Bluetooth, Wireless LAN, PC Camera, Fingerprint and 3.75G modules (some of which may be optional depending on your purchase configuration).
- **Chapter 8** A troubleshooting guide.
- **Appendix A** Definitions of the interface, ports/jacks which allow your computer to communicate with external devices.
- **Appendix B** Information on the Intel Video driver controls.
- **Appendix C** The computer’s specifications.
- **Appendix D** Information on the Windows XP OS.
Introduction
This wide screen tough notebook computer provides an ideal platform for mobile computer use with a magnesium alloy case to help provide resistance to shocks, bump and drops, an anti-shock mounting design to protect the hard disk and LCD screen from damage and a spill resistant keyboard (water resistant to 100cc) and case design preventing spills (see “What to do if you Spill Liquid on the Computer” on page 6 - 11 for details) from leaking into the sensitive interior.

LED Backlight LCD
The LED Backlight LCD on this computer model allows for greater color quality, and consumes less power than conventional fluorescent LCDs and can therefore save significant battery life. In addition the LED backlit LCD allows for clearer reading in bright conditions.
Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1, “BIOS Utilities” on page 5 - 1 and “Upgrading The Computer” on page 6 - 1 in the remainder of this User’s Manual. You may also find the notes marked with a of interest to you.

Beginners and Not-So-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in this Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the symbol. Also please note the safety and handling instructions as indicated in the Preface.
Quick Start Guide

Not Included
Operating Systems (e.g. Windows Vista/Windows XP) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in Table 4 - 1, on page 4 - 3. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you); refer to Chapter 4 for installation instructions.

Ports and Jacks
See “Notebook Ports and Jacks” on page A - 2 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
System Software
Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find the following operating systems are supported.

<table>
<thead>
<tr>
<th>Operating System &amp; Version Supported</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>*Windows XP Home or Professional Editions (with Service Pack 3)</td>
<td>In order to run Windows XP without limitations or decreased performance, your computer requires a minimum 512MB of system memory (RAM)</td>
</tr>
<tr>
<td>Windows Vista Home Basic/Home Premium/Business/Enterprise/Ultimate Editions (with Service Pack 1)</td>
<td>Note that Windows Vista Home Basic Edition supports only limited Tablet PC functions. In order to run Windows Vista without limitations or decreased performance, your computer requires a minimum</td>
</tr>
</tbody>
</table>

*Table 1 - 1 - Operating Systems Supported*

*Note: For information on the Windows XP OS (specifically power, video and driver information) see “Windows XP Information” on page D - 1.*
Quick Start Guide

System Startup

1. Remove all packing materials and place the computer on a stable surface.
2. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
3. Attach the AC/DC adapter to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
4. Pull the carrying handle out to easily access the latch. Use one hand to push the LCD latch up and forward to unlock it, and carefully raise the lid/LCD to a comfortable viewing angle while using the other hand (as illustrated in Figure 1 - 1 below) to support the base of the computer (Note: Never lift the computer by the lid/LCD).
5. Press the power button and then release it to turn the computer “on”.

Shutdown

Note that you should always shut your computer down by choosing the Shut Down command from the Lock Button Menu in Windows Vista. This will help prevent hard disk or system problems.

Figure 1 - 1 - Opening the Lid/LCD/Computer with AC/DC Adapter Plugged-In

1 - 6 System Startup
Operating System Setup

If you are installing new system software, or are re-configuring your computer for a different system, make sure you configure the appropriate OS setting in the BIOS before installing a new operating system.

1. Start-up the computer and press <F2> to enter the BIOS.
2. Go to the Advanced menu, select “Installed O/S” and make sure the appropriate operating system is selected.
3. Go to the Exit menu and select “Exit Saving Changes” (or press F10 and select “Yes” then press Enter) and press Enter to exit the BIOS and reboot the computer.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the function key combinations to toggle power to the 3.75G/WLAN/Bluetooth modules, and check the LED indicator icon to see if the modules are powered on or not (see Table 1 - 3, on page 1 - 11 / Table 1 - 2, on page 1 - 9).
LED Indicators

The LED indicators on the computer display helpful information about the current status of the computer.

Quick Start Guide

Keyboard

The keyboard has a numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly (see Figure 1-4). See Table 1-3, on page 1-11 for details of the function/hot key indicators.

Figure 1-4 - Keyboard

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot-keys unique to the system’s regular keyboard may not work.
**Function Keys & Visual Indicators**

The function keys (F1 - F12 etc.) will act as hot keys when pressed while the Fn key is held down. In addition to the basic function key combinations; visual indicators (see the table below) are available when the Hot Key driver is installed (see “” on page 4 - 7).

Quick Start Guide

System Map: Front & Rear Views

1. LCD Latch
2. Carrying Handle
3. Speakers
4. Battery

Carrying Handle
Pull the carrying handle out to transport the computer, and push it in until it clicks into position for standard desktop use.

Battery Information
Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See “Battery Information” on page 3 - 10 for full instructions.
System Map: Left View

1. DC-In Jack
2. External Monitor Port
3. S/PDIF-Out Jack
4. Microphone-In Jack
5. Headphone-Out Jack
6. Vent/Fan Intake/Outlet
7. RJ-45 LAN Jack
8. 2 * USB 2.0 Port
9. ExpressCard Slot (see page 2 - 7)
10. 7-in-1 Card Reader

7-in-1 Card Reader

The card reader allows you to use the most popular digital storage card formats:

- MMC (MultiMedia Card) / SD (Secure Digital) / MS (Memory Stick) / MS Pro (Memory Stick Pro) / MS Duo (requires PC adapter) / Mini SD (requires PC adapter) / RS MMC (requires PC adapter)

Overheating

To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intake while the computer is in use.
Quick Start Guide

System Map: Right View

Figure 1 - 7
Right View

1. Optical Device Drive Bay (for CD/DVD Device - see page 2 - 3)
2. 1 * USB 2.0 Port
3. GPS Antenna Socket (for optional GPS Module)
4. Serial (COM1) Port
5. Security Lock Slot

Changing DVD Regional Codes

Go to the Control Panel and double-click Device Manager (Hardware and Sound), then click the + next to DVD/CD-ROM drives. Double-click on the DVD-ROM device to bring up the Properties dialog box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code (see “DVD Regional Codes” on page 2 - 5).

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer.

Disk Eject Warning

Don’t try to eject a CD/DVD while the system is accessing it. This may cause the system to “crash”. Stop the disk first then eject it, or press the stop button twice.

CD/DVD Emergency Eject

If you need to manually eject a CD/DVD (e.g. due to an unexpected power interruption) you may push the end of a straightened paper clip into the emergency eject hole. Do not use a sharpened pencil or any object that may break and become lodged in the hole. Don’t try to remove a floppy disk/CD/DVD while the system is accessing it. This may cause the system to “crash”. 
System Map: Bottom View

1. Battery
2. Hard Disk Bay Cover
3. RAM & CPU Bay Cover
4. Vent/Fan Intake/Outlet
5. Drainage Outlet (see “What to do if you Spill Liquid on the Computer” on page 6 - 11)

Battery Information
Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See “Battery Information” on page 3 - 10 for full instructions.

CPU
The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.

Overheating
To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intake while the computer is in use.
Windows Vista Start Menu & Control Panel

Most of the control panels, utilities and programs within *Windows Vista* (and most other *Windows* versions) are accessed from the **Start** menu. When you install programs and utilities they will be installed on your hard disk drive, and a shortcut will usually be placed in the **Start** menu and/or the desktop. Right-click the **Start menu** icon, and then select **Properties** if you want to customize the appearance of the **Start** menu.

In many instances throughout this manual you will see an instruction to open the **Control Panel**. The **Control Panel** is accessed from the **Start** menu, and it allows you to configure the settings for most of the key features in *Windows* (e.g. power, video, network, audio etc.). *Windows Vista* provides basic controls for many of the features, however many new controls are added (or existing ones are enhanced) when you install the drivers listed in *Table 4 - 1, on page 4 - 3*. To see all controls it may be necessary to toggle to Classic View on.
Video Features

You can switch display devices, and configure display options, from the Display Settings control panel (in Personalization) in Windows Vista as long as the appropriate Intel video driver is installed. For more detailed video information see “Intel Video Driver Controls” on page B - 1.

To access Display Settings in Windows Vista:
1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Click Adjust screen resolution under the Appearance and Personalization menu (or double-click Personalization > Display Settings).
3. Move the slider to the preferred setting in Resolution: 1 (Figure 1 - 10 on page 1 - 18).
4. Click the arrow, and scroll to the preferred setting In Colors: 2 (Figure 1 - 10 on page 1 - 18).
5. Click Advanced Settings (button) 3 (Figure 1 - 10 on page 1 - 18) and click Intel(R) GMA Driver for mobile (tab).
6. Click Graphics Properties (button) 4 (Figure 1 - 10 on page 1 - 18) to access the Intel GMA control panel (this control panel can also be accessed by double-clicking Intel(R) GMA Driver for mobile in Classic View).
7. The Intel GMA control panel can also be accessed by clicking the icon 5 in the taskbar and selecting Graphics Properties from the menu.

Display Devices & Options
Besides the built-in LCD, you can also use an external VGA monitor (CRT) or external Flat Panel Display connected to the external monitor port as your display device.
Quick Start Guide

Table 1 - 4 - Display Options

<table>
<thead>
<tr>

<td>Both connected displays are treated as separate devices, and act as a virtual desktop</td>
</tr>
</tbody>
</table>
Power Options

The Power Options (Hardware and Sound menu) control panel icon in Windows (see page 1 - 16) allows you to configure power management features for your computer. You can conserve power by means of power plans and configure the options for the power button, sleep button, computer lid (when closed), display and sleep mode from the left menu. Note that the Power saver plan may have an affect on computer performance.

Click to select one of the existing plans, or click Create a power plan in the left menu and select the options to create a new plan. Click Change Plan Settings and click Change advanced power settings to access further configuration options.

Pay attention to the instructions on battery care in “Battery Information” on page 3 - 10.

Note: Sleep is the default power saving state in Windows Vista

Figure 1 - 11 - Power Options
Chapter 2: Features & Components

Overview

Read this chapter to learn more about the following main features and components of the computer:

- Hard Disk Drive/Solid State Drive
- Optical (CD/DVD) Device
- 7-in-1 Card Reader
- ExpressCard Slot
- Touchpad and Buttons/Mouse
- Audio Features
- Adding a Printer
Hard Disk Drive/Solid State Drive

The hard disk drive/solid state drive is used to store your data in the computer. The hard disk can be taken out to accommodate other 2.5" serial (SATA) hard disk drives OR solid state drives (see “Storage” on page C - 2) with a height of 9.5 mm.

The HDD/SSD is accessible from the bottom of your computer as seen below. For further details see “Upgrading the Hard Disk Drive” on page 6 - 4.

Figure 2 - 1
Hard Disk Location
Optical (CD/DVD) Device

There is a bay for a 5.25" optical (CD/DVD) device (12.7mm height). The actual device will depend on the module you purchased (see “Storage” on page C - 2). The optical device is usually labeled “Drive D:” and may be used as a boot device if properly set in the BIOS (see “Boot Menu” on page 5 - 16).

Loading Discs
To insert a CD/DVD, press the open button 1 and carefully place a CD/DVD onto the disc tray with label-side facing up (use just enough force for the disc to click onto the tray’s spindle). Gently push the CD/DVD tray in until its lock “clicks” and you are ready to start. The busy indicator 2 will light up while data is being accessed, or while an audio/video CD, or DVD, is playing. If power is unexpectedly interrupted, insert an object such as a straightened paper clip into the emergency eject hole 3 to open the tray.

Sound Volume Adjustment
How high the sound volume can be set depends on the setting of the volume control within Windows. Click the Volume icon on the taskbar to check the setting (see “Audio Features” on page 2 - 9).
Handling CDs or DVDs
Proper handling of your CDs/DVDs will prevent them from being damaged. Please follow the advice below to make sure that the data stored on your CDs/DVDs can be accessed.

Note the following:

• Hold the CD or DVD by the edges; do not touch the surface of the disc.
• Use a clean, soft, dry cloth to remove dust or fingerprints.
• Do not write on the surface with a pen.
• Do not store or place the CD or DVD in high-temperature areas.
• Do not attach paper or other materials to the surface of the disc.
• Do not use benzene, thinner, or other cleaners to clean the CD or DVD.
• Do not bend the CD or DVD.
• Do not drop or subject the CD or DVD to shock.
**DVD Regional Codes**

To change the DVD regional codes see “Changing DVD Regional Codes” on page 1 - 14.

<table>
<thead>
<tr>
<th>Region</th>
<th>Geographical Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>USA, Canada</td>
</tr>
<tr>
<td>2</td>
<td>Western Europe, Japan, South Africa, Middle East &amp; Egypt</td>

<tr>
<td>3</td>
<td>South-East Asia, Taiwan, South Korea, The Philippines, Indonesia, Hong Kong</td>
</tr>
<tr>
<td>4</td>
<td>South &amp; Central America, Mexico, Australia, New Zealand</td>
</tr>
<tr>
<td>5</td>
<td>N Korea, Russia, Eastern Europe, India &amp; Most of Africa</td>
</tr>
<tr>
<td>6</td>
<td>China</td>
</tr>
</tbody>
</table>

Table 2 - 1

DVD Regional Coding

Figure 2 - 3

DVD Regions
7-in-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk(s). Make sure you install the Card Reader driver (see “Card Reader” on page 4 - 5).

- MMC (MultiMedia Card)
- SD (Secure Digital)
- MS (Memory Stick)
- MS Pro (Memory Stick Pro)
- MS Duo (requires PC adapter*)
- Mini SD (requires PC adapter*)
- RS MMC (requires PC adapter*)

*Note: The PC adapters are usually supplied with these cards.

Card Reader Cover

Make sure you keep the rubber cover provided in the card reader when not in use. This will help prevent foreign objects and/or dust getting in to the card reader.

Figure 2 - 4
Right View

1. Card Reader
ExpressCard Slot

The computer is equipped with an ExpressCard/34/54 slot that reads Express Card/34 and ExpressCard/54 formats. ExpressCards are the successors to PCMCIA (PC Cards). Make sure you install the Card Reader driver (see “Card Reader” on page 4 - 5).

ExpressCard/54 is used for applications which require a larger interface slot, e.g. CompactFlash card reader. The number denotes the card width; 54mm for the ExpressCard/54 and 34mm for the ExpressCard/34.

Inserting and Removing ExpressCards

- Align the ExpressCard with the slot and push it in until it locks into place (as pictured in the generic figure below).
- To remove an ExpressCard, simply press the card to eject it.
Touchpad and Buttons/Mouse

The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse.

Once you have installed the Touchpad driver (see “Touchpad” on page 4 - 5) you can configure the functions by double-clicking the Touchpad driver icon on the taskbar. You may then configure the Touchpad tapping, buttons, scrolling, pointer motion and sensitivity options to your preferences. You will find further information at www.synaptics.com.

Figure 2 - 7
Mouse Properties
Audio Features

You can configure the audio options on your computer from the Sound control panel in *Windows*, or from the Realtek HD Audio Manager icon in the taskbar/control panel (right-click the taskbar icon to bring up an audio menu). The volume may also be adjusted by means of the \textbf{Fn} + F5/F6 key combination or \textbf{On-Screen Menu} buttons.

Right-click the icon to access the menu above.

\textbf{Sound Volume Adjustment}

The sound volume level is set using the volume control within *Windows* (and the volume function keys on the computer). Click the volume icon in the taskbar to check the setting.

\textbf{Figure 2 - 8}

Realtek Audio Manager
Adding a Printer

The most commonly used peripheral is a printer. The following conventions will help you to add a printer; however it is always best to refer to the printer manual for specific instructions and configuration options.

USB Printer

Most current printers have a USB interface connection. You may use any one of the ports to connect the printer.

Install Instructions:
1. Set up the printer according to its instructions (unpacking, paper tray, toner/ink cartridge etc.).
2. Turn ON the computer.
3. Turn ON the printer.
4. Connect the printer’s USB cable to one of the USB ports on the computer.
5. Windows will identify the printer and either load one of its own drivers or ask you to supply one. Follow the on-screen instructions.

Parallel Printer

This is still a very common type of printer. The install instructions are in the sidebar, however you will need to purchase a parallel to USB converter.
Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system. This chapter covers:

- The Power Sources
- Turning on the Computer
- Power Plans
- Power-Saving States
- Configuring the Power Buttons
- Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user’s manual of your operating system.

(Note: All pictures used on the following pages are from the Windows Vista OS.)

Hibernate Mode In Windows Vista SP1

If you are using Windows Vista SP1 with 4GB RAM installed, see page 8 - 12 for information on Hibernate.
The Power Sources

The computer can be powered by either an AC/DC adapter or a battery pack.

**AC/DC Adapter**

Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. Attach the AC/DC adapter to the DC-in jack on the left of the computer.
2. Plug the AC power cord into an outlet, and then connect the AC power cord to the AC/DC adapter.
3. Raise the lid/LCD to a comfortable viewing angle.
4. Press the power button to turn “On”.

**Battery**

The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “How do I completely discharge the battery?” on page 3 - 14).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 10.
Turning on the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Sleep/Hibernate hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will force the computer to shut down). Use Power Options (Hardware and Sound menu) control panel in Windows Vista to configure this feature.

Forced Off

If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for 4 seconds, or longer, to force the system to turn itself off.

Power Button Sleep

Sleep is the default power mode when the power button is pressed for less than 4 seconds. You may configure the options for the power button from the Power Options (Hardware and Sound menu) control panel in Windows Vista (see your OS’s documentation, or “Configuring the Power Buttons” on page 3 - 8 for details).
Power Plans

The computer can be configured to conserve power by means of power plans. You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

Figure 3 - 1
Power Plan Advanced Settings

Password

It is recommended that you enable a password on system resume in order to protect your data.

Resuming Operation

See Table 3 - 1, on page 3 - 9 for information on how to resume from a power-saving state.
Each *Windows power plan* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose **High performance** for maximum performance when the computer is powered from an AC power source. Choose the **Power saver** (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

![Power Plans](image_url)
Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. **Sleep** is the default power-saving state in *Windows Vista*.

Earlier versions of *Windows* used Stand By and Hibernate as system power-saving states. *Windows Vista* combines the features of Stand By and Hibernate into the default **Sleep** power-saving state.

**Sleep**

In **Sleep** all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter **Sleep** to save power.

The PC wakes from **Sleep within seconds** and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in **Sleep** is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.
Hibernate

Hibernate uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. Hibernate will also return you to where you last left off within seconds. You should put your mobile PC into Hibernate if you will not use the computer for a period of time, and will not have the chance to charge the battery.

Shut Down

You should shut down the computer if you plan to install new hardware (don’t forget to remove the battery and follow all the safety instructions in Chapter 6), plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from shut down takes longer than from Sleep or Hibernate.

Hibernate Mode In Windows Vista SP1

If you are using Windows Vista SP1 with 4GB RAM installed, see page 8 - 12 for information on Hibernate.

Figure 3 - 3
Lock Button Menu
Configuring the Power Buttons

The power/sleep button (F<sub>n</sub> + F<sub>4</sub> key combo) and closed lid may be set to send the computer into a power-saving state.

It is recommended that you enable a password on wake up in order to protect your data. However you can disable this setting from the Power Options menu by clicking "Require a password on wakeup" in the left menu, and selecting the options (click "Change settings that are currently unavailable").

![Power Options Define Power Buttons](image)
Resuming Operation
You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (\textbf{Fn} + \textbf{F4} key combo).

<table>

</table>

Closing the Lid
If you have chosen to send the computer to \textbf{Sleep} when the lid is closed, raising the lid will wake the system up.

Table 3 - 1
Resuming Operation

Power Button
When the computer is on, you can use the power button as a Sleep/Hibernate/Shut Down hot key button when it is pressed for less than 4 \textbf{seconds} (pressing and holding the power button for longer than this will force the computer to shut down).
Battery Information

Please follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan Advanced Settings (see Figure 3 - 1 on page 3 - 4).

Click the battery icon \[\text{Battery Icon} \] in the taskbar to see the current battery level and charge status.

Figure 3 - 5
Battery Icon (Taskbar) & Battery Advanced Settings
Conserving Battery Power

• Use a **power plan** that conserves power (e.g. **Power saver**), however note that this may have an affect on computer performance.

• Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.

• Reduce the amount of time before the display is turned off.

• Close wireless, Bluetooth, modem or communication applications when they are not being used.

• Disconnect/remove any unnecessary external devices e.g. USB devices, ExpressCards etc.

The **Windows Mobility Center** control panel provides an easy point of access for information on battery status, power plans used etc.

*Figure 3-6 Windows Mobility Center*
Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days.

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason see “Removing the Battery” on page 6 - 3.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 14 for instructions on how to do this).

Recharging the Battery with the AC/DC Adapter
The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. (Refer to “System Map: LCD Panel Open - Models E & F” on page 1 - 10 for information on the battery charge status, and to “Battery Information” on page 3 - 10 for more information on how to maintain and properly recharge the battery pack.)
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

Caution
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.

Damaged Battery Warning
Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your service center. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. Create a power plan for discharging the battery and set all the options to Never.
3. Click Change plan settings (after saving it) and click Change advanced power settings.
4. Scroll down to **Battery** and click + to expand the battery options.
5. Choose the options below (click **Yes** if a warning appears):

- Low battery levels = 0%
- Critical battery Levels = 0%
- Low battery action = Do Nothing
- Critical battery action (On battery) = Shut Down
- Critical battery action (Plugged in) = Do Nothing
Power Management

**How do I fully charge the battery?**
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

**How do I maintain the battery?**
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

The Device Drivers & Utilities + User’s Manual disc contains the drivers and utilities necessary for the proper operation of the computer.

Table 4 - 1, on page 4 - 3 lists what you need to install and it is very important that the drivers are installed in the order indicated (see “Driver Installation” on page D - 28 for Windows XP information).

Module Driver Installation

The procedures for installing drivers for the Wireless LAN and 3.75G/HSPA modules are provided in “Modules & Options” on page 7 - 1.

Note: The operating system is the default setting for Bluetooth control in Windows Vista, and does not require a driver. See “Bluetooth Module” on page 7 - 2 for configuration instructions.
Drivers & Utilities

Driver Installation

Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button), or Option Drivers (button) to access the optional driver menu.

1. Check the driver installation order from Table 4 - 1, on page 4 - 3 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.
2. Click to select the driver you wish to install, after installing each driver it will become grayed out (if you need to reinstall any driver, click the Unlock button).
3. Follow the instructions for each individual driver installation procedure as listed on the following pages.

Figure 4 - 1 - Drivers Installer Screen 1

Figure 4 - 2 - Drivers Installer Screen 2

4 - 2 Driver Installation
### Manual Driver Installation

Click *Browse CD* (button) in the *Drivers Installer* application and browse to the executable file in the appropriate driver folder.

### Windows Update

After installing all the drivers make sure you enable **Windows Update** in order to get all the latest security updates etc. (all updates will include the latest *hotfixes* from Microsoft). See “*Windows Update*” on page 4 - 7 for instructions.

---

**Windows Vista Service Pack 1**

Make sure you install **Windows Vista Service Pack 1** (or a Windows Vista version which includes Service Pack 1) **before installing any drivers**. Go to the Microsoft website for download details, or contact your service center.
Drivers & Utilities

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the Control Panel in the Windows OS and double-click the Programs and Features icon (Programs > Uninstall a program). Click to select the driver (if it is not listed see below) and click Uninstall, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the Programs and Features menu:

1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Double-click Device Manager (Hardware and Sound > Device Manager).
3. Double-click the device you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click Driver (tab) and click the Update Driver or Uninstall button and follow the on screen prompts.

User Account Control (Win Vista)
If a User Account Control prompt appears as part of the driver installation procedure, click Continue/Allow, and follow the installation procedure as directed.

Windows Security Message
If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or Install to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found
If you see the message “New Hardware Found” (Found New Hardware Wizard) during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.

4 - 4 Driver Installation
Driver Installation Procedure

Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button), or Option Drivers (button) to access the optional driver menu.

Driver Installation General Guidelines

The driver installation procedures outlined in this Chapter (and in Chapter 7 Options & Modules), are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. Next > Next > Finish) unless you are an advanced user. In many cases a restart is required to install the driver.

Chipset
1. Click 1.Install Chipset Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

Video
1. Click 2.Install Video Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

LAN
1. Click 3.Install LAN Driver > Yes.
2. Click Next > Install.
3. Click Finish.
4. The network settings can now be configured.

Card Reader
1. Click 4.Install Cardreader Driver > Yes.
2. Click Install > Finish.

Touchpad
1. Click 5.Install Touchpad Driver > Yes.
2. Click Next.
3. Click Finish > Restart Now to restart the computer.
Drivers & Utilities

Trusted Platform Module (TPM)
Before installing the Trusted Platform Module driver you should enable the TPM State in the BIOS (see “Security Menu” on page 5 - 11 and see “Trusted Platform Module” on page 7 - 7 for full details.

1. Click 6.Install TPM Driver > Yes.
2. Click Install > Next.
3. Click the button to accept the license and click Next.
4. Click Next > Next > Install.
5. Click Finish > Yes to restart the computer.

Fingerprint Reader
1. Click 7.Fingerprint > Yes.
2. Click Software Installation.
3. Click Next > Next > Next.
4. Click Finish > Yes to restart the computer.
5. See “Fingerprint Reader Module” on page 7 - 13 for details.

Hot Key Utility
1. Click 8.Install Hotkey Utility > Yes.
2. Click Next > Install.
3. Click Finish > Finish to restart the computer.

PC Camera (Optional)
Before installing the PC Camera driver, make sure that the optional PC Camera is on. Use the Fn + F10 key combination to power the camera on.

1. Click 9.Webcam > Yes.
2. Choose the language you prefer and click Next > Next.
3. Click Finish to restart the computer.
4. See “PC Camera Module” on page 7 - 19 for details.

4 - 6 Driver Installation
Audio
1. Click **10. Install Audio Driver > Yes.**
2. Click **Next.**
3. Click **Finish** to restart the computer.

Note that after installing the audio driver the system will not return to the **Drivers Installer** screen. To install any of the optional drivers listed overleaf, eject the **Device Drivers & Utilities + User’s Manual** disc and then reinsert it (or double-click the disc icon in My Computer), and click **Option Drivers** (button) to access the optional driver menu.

Windows Update

After installing all the drivers make sure you enable **Windows Update** in order to get all the latest security updates etc. (all updates will include the latest **hotfixes** from Microsoft).

To enable **Windows Update** make sure you are connected to the internet:

1. Click **Start**, and click **Control Panel** (or point to **Settings** and click **Control Panel**).
2. Click **Check for updates** (Security), or double-click **Security Center** and click **Windows Update**.
3. Double-click **Check for updates (button)**.
4. The computer will now check for updates (you need to be connected to the internet).
5. Click **Install now** (button) to install the updates.
Optional Drivers
See the pages indicated for the driver installation procedures for any optional modules included in your purchase option.

Bluetooth Module
Note: The operating system is the default setting for Bluetooth control in Windows Vista, and does not require a driver. See “Bluetooth Module” on page 7 - 2 for configuration instructions.

Wireless LAN Module
See the introduction in “Wireless LAN Module” on page 7 - 26, and check the installation procedure.

3.75G/HSPA Module
See the introduction in “3.75G/HSPA Module” on page 7 - 44, and check the installation procedure.
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software:

**Diagnostics:** The POST (Power-On Self Test)

**Configuration:** The *Phoenix SecureCore(tm) Setup Utility*

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in *Setup*. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: *Don’t make any changes unless you are sure of what you are doing.* Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.

**Warning**

Incorrect settings can cause your system to malfunction. To correct mistakes, return to *Setup and restore the Setup Defaults* with `<F9>`.
The Power-On Self Test (POST)

Each time you turn on the computer, the system takes a few seconds to conduct a POST, including a quick test of the on-board RAM (memory). The screen below will appear if you have enabled the Boot-time Diagnostic Screen (see “Boot-time Diagnostic Screen (Advanced Menu)” on page 5 - 9).

As the POST proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run Setup. If there are no problems, the Setup prompt will disappear and the system will load the operating system. Once that starts, you can’t get into Setup without rebooting.

Figure 5 - 1
POST Screen

Press <F2> to enter SETUP

BIOS Utilities

The Power-On Self Test (POST)
Failing the POST
Errors can be detected during the POST. There are two categories, “fatal” and “non-fatal”.

Fatal Errors
These stop the boot process and usually indicate there is something seriously wrong with your system. Take the computer to your service representative or authorized service center as soon as possible.

Non-Fatal Errors
This kind of error still allows you to boot. You will get a message identifying the problem (make a note of this message!) followed by the prompt:

- Press <F1> to resume
- <F2> to enter Setup

Press F1 to see if the boot process can continue. It may work, without the correct configuration.

Press F2 to run the Setup program and try to correct the problem. If you still get an error message after you change the setting, or if the “cure” seems even worse, call for help.
The Phoenix SecureCore(tm) Setup Utility tells the system how to configure itself and manage basic features and subsystems (e.g. port configuration).

Entering Setup
To enter Setup, turn on the computer and press F2 during the POST. The prompt (Press F2 to Enter Setup) seen on page 5 - 2 is usually present for a few seconds after you turn on the system. If you get a “Keyboard Error”, (usually because you pressed F2 too quickly) just press F2 again.

If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The Setup main menu will appear.
Setup Screens
The following pages contain additional advice on portions of the Setup.

Along the top of the screen is a menu bar with menu headings. When you select a heading, a new screen appears. Scroll through the features listed on each screen to make changes to Setup.

Instructions on how to navigate each screen are in the box along the bottom of the screen. If these tools are confusing, press F1 to call up a General Help screen, and then use the arrow keys to scroll up or down the page.

The Item Specific Help on the right side of each screen explains the highlighted item and has useful messages about its options.

If you see an arrow ➤ next to an item, press Enter to go to a sub-menu on that subject. The sub-menu screen that appears has a similar layout, but the Enter key may execute a command.
**System Time & Date (Main Menu)**

The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.
SATA Port1/2 (Main Menu)
Pressing **Enter** opens the sub-menu to show the configuration of a HDD/optical Device on the computer’s SATA Port 1 or SATA Port 2. Use the **Auto** (Type:) setting to have the items configured automatically for you.

System/Extended Memory: (Main Menu)
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.
**SIO ITE8305E Configuration (Advanced Menu)**

The sub-menu here allow you to enable/disable the external serial port. You can disable detection to save system power.
Installed O/S (Advanced Menu)
This setting tells the computer what kind of operating system you’re using. Make sure you choose the correct setting for your O/S in order to prevent system problems. Note: If you select the **Vista** O/S then the **SATA Mode Selection** menu will become available. If you are installing the **Windows XP** O/S make sure you have set the appropriate operating system here in order to prevent system problems.

Legacy USB Support: (Advanced Menu)
Choose “**Enabled**” if you intend to use **USB** devices in systems which do not normally support USB functionality (e.g. DOS). The default setting is “**Enabled**” and does not need to be changed if you intend to use your USB devices in **Windows**.

Boot-time Diagnostic Screen (Advanced Menu)
Use this menu item to enable/disable the Boot-time Diagnostic Screen or POST screen (see “**The Power-On Self Test (POST)**” on page 5 - 2).

Legacy OS Boot (Advanced Menu)
If “**Enabled**” the system will attempt to load the Legacy OS (e.g. **Vista/Windows XP**) first. If set to “**Disabled**” the system will attempt to **EFI** (Extensible Firmware Interface) boot before the Legacy OS.
Reset Configuration Data (Advanced Menu)
This item is set to No as default. You can change the setting to Yes if you have installed a new add-on which has reconfigured the system, resulting in such a serious system conflict that the operating system is unable to boot.

Power On Boot Beep (Advanced Menu)
Use this menu item to enable/disable the beep as the computer starts up.

Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the audible warning when the battery has reached low power status.

Fan Control (Advanced Menu)
This menu item allows you to set the fan cooling behavior under light system activity (if you choose Automatic the system will adjust the fan cooling as appropriate for the system activity).

Power Conserve Mode (Advanced Menu)
This menu allows you to configure power conservation from the Setup Utility to work in battery only, in AC and battery or to be disabled altogether.
Security Menu

#### Item Specific Help

Supervisor Password controls access to the setup utility.

---

**Set Supervisor Password (Security Menu)**

You can set a password for access to the **Phoenix SecureCore (tm) Setup Utility**. This will not affect access to the computer OS (only the **Phoenix SecureCore (tm) Setup Utility**).

---

![Security Menu](image)

The changes you make here affect the access to the **Setup** utility itself, and also access to your machine as it boots up after you turn it on. These settings do not affect your machine or network passwords which will be set in your software OS.

---

**Figure 5 - 4 Security Menu**
Set User Password (Security Menu)
You can set a password for user mode access to the Phoenix SecureCore (tm) Setup Utility. This will not affect access to the computer OS, (only the Setup utility) unless you choose to set a Password on Boot (see below). Many menu items in the Phoenix SecureCore (tm) Setup Utility cannot be modified in user mode. You can only set the user password after you have set the supervisor password.

Fixed disk boot sector (Security Menu)
If you choose “Write-Protect” this will protect against viruses being written to the hard disk boot sector (this is not a substitute for installing an anti-virus program - see “Viruses” on page 8 - 4).

Password on boot (Security Menu)
Specify whether or not a password should be entered to boot the computer (you may only set a password on boot if a supervisor password is enabled). If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Note: To clear existing passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance.
TPM Support (Security Menu)
Enable **TPM Support** from this menu, and the **TPM State** menu will then appear (see “TPM State” on page 5 - 14). **Note:** If you disable TPM Support then your TPM information may be erased altogether. You should only disable TPM support when you need to clear the TPM information. The default setting is “**Enabled**”.

TPM Password
Note that you should set a supervisor password in the BIOS to protect the TPM information from being tampered with by unauthorized users.
TPM State

This menu allows you to set the level of TPM functionality. You can enable/disable the TPM function altogether, or clear all existing TPM information.

Note: If you clear all TPM information it will be erased altogether and the information will need to be reconfigured.
If you have made any changes to the TPM State you will be asked to execute or reject the changes made after you have saved and exited the BIOS. Highlight the required option (it will be white), and then press Enter to save it.

**WARNING!!!**
Clearing erases information stored on the TPM. You will lose all created keys and access to data encrypted by these keys.

Reject
Execute

**Item Specific Help**
Execute Physical Presence operations and exit

**Physical Presence operations**
TPM configuration change was requested to State: Clear
When you turn the computer on it will look for an operating system (e.g. Windows Vista) from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot priority order. Item specific help on the right is available to help you move devices up and down the order.
Choosing to **Discard Changes**, or **Exit Discarding Changes**, will wipe out any changes you have made to the **Setup**. You can also choose to restore the original **Setup** defaults that will return the **Setup** to its original state, and erase any previous changes you have made in a previous session.
Chapter 6: Upgrading The Computer

Overview

This chapter contains information on upgrading the computer. Follow the steps outlined to make the desired upgrades. If you have any trouble or problems you can contact your service representative for further help. Before you begin you will need:

- A small crosshead or Phillips screwdriver
- A small regular slotted (flathead) screwdriver
- An antistatic wrist strap

Before working with the internal components you will need to wear an antistatic wrist strap to ground yourself because static electricity may damage the components.

The chapter includes:

- Removing the Battery
- Upgrading the Hard Disk Drive
- Upgrading the Optical (CD/DVD) Device
- Upgrading the System Memory (RAM)
- What to do if you Spill Liquid on the Computer

Please make sure that you review each procedure before you perform it.
Upgrading The Computer

When Not to Upgrade

These procedures involve opening the system’s case, adding and sometimes replacing parts. You should not perform any of these upgrades if:

- Your system is still under warranty or a service contract
- You don’t have all the necessary equipment
- You’re not in the correct environment
- You doubt your abilities

Under any of these conditions, contact your service representative to purchase or replace the component(s).

Upgrading the Processor

If you want to upgrade your computer by replacing the existing processor with a faster/new one you will need to contact your customer service representative. We recommend that you do not do this yourself, since if it is done incorrectly you may damage the processor or mainboard.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

Removal Warning

When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before turning the computer on.
Removing the Battery

If you are confident in undertaking upgrade procedures yourself, for safety reasons it is best to remove the battery.

1. Turn the computer off, and turn it over.
2. Slide the latch 1 in the direction of the arrow.
3. Slide the latch 2 in the direction of the arrow, and hold it in place.
4. Slide the battery out in the direction of the arrow 3.

Warranty Warning

Please check with your service representative before undertaking any upgrade procedures to find out if this will VOID your warranty.

Figure 6 - 1
Battery Removal
Upgrading The Computer

Upgrading the Hard Disk Drive

The hard disk drive can be taken out to accommodate other 2.5" serial (SATA) hard disk drives with a height of 9.5mm (h) (see “Storage” on page C - 2). Follow your operating system’s installation instructions, and install all necessary drivers and utilities (see “Driver Installation” on page 4 - 2), when setting up a new hard disk.

1. Turn off the computer, and turn it over and remove the battery.
2. Locate the hard disk bay cover and remove screws 1 & 2.
3. Remove the hard disk bay cover 3.

HDD System Warning

New HDD’s are blank. Before you begin make sure:
You have backed up any data you want to keep from your old HDD.
You have all the CD-ROMs and FDDs required to install your operating system and programs.
If you have access to the internet, download the latest application and hardware driver updates for the operating system you plan to install. Copy these to a removable medium.

Figure 6 - 2
Removing the Hard Disk Bay Cover
4. Carefully lift the hard disk up at point 4.
5. Grip the tab 5 and slide the hard disk in the direction of arrow 6.

Figure 6 - 3
Removing the Hard Disk
6. Remove the hard disk.
7. Carefully insert the new hard disk and replace all the covers and screws.

Figure 6 - 4
Hard Disk Out

Figure 6 - 5
Hard Disk Insertion

6 - 6 Upgrading the Hard Disk Drive
Upgrading the Optical (CD/DVD) Device

1. Turn off the computer, and turn it over and remove the battery.
2. Locate the RAM & CPU bay cover and remove screws 1 - 4.
3. Carefully (a fan and cable are attached to the under side of the cover) lift up the bay cover.
4. Carefully disconnect the fan cable 5, and remove the cover 6.

Make sure you reconnect the fan cable 5 before screwing down the bay cover.
Upgrading The Computer

5. Remove screws 7 - 9 and use a screwdriver to carefully slide out the optical device at point 10.
6. Insert the new device and replace the optical device screws 7 - 9.
7. **Reconnect the fan cable before replacing the bay cover** (6 in Figure 6 - 6 on page 6 - 7).
8. Replace the bay cover and screws.

Figure 6 - 7
Removing the Optical Device
Upgrading the System Memory (RAM)

1. Turn off the computer, and turn it over and remove the battery.
2. Locate the RAM & CPU bay cover and remove screws 1 - 4.
3. Carefully (a fan and cable are attached to the under side of the cover) lift up the bay cover.
4. Carefully disconnect the fan cable 5, and remove the cover 6.

System Memory

The computer has one memory socket for 200 pin Small Outline Dual In-line (SO-DIMM) DDRII (DDR2) type memory modules (see “Memory” on page C - 2 for details of supported module types).

The total memory size is automatically detected by the POST routine once you turn on your computer.

Figure 6 - 8
Removing the RAM & CPU Bay Cover
5. Gently pull the two release latches on the sides of the memory socket in the direction indicated by the arrows (7 & 8) in Figure 6 - 9.
6. The RAM module will pop-up, and you can remove it.

7. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
8. The module’s pin alignment will allow it to only fit one way. Make sure the module is seated as far into the slot as it will go. DO NOT FORCE the module; it should fit without much pressure.
9. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
10. Reconnect the fan cable before replacing the bay cover (6) in Figure 6 - 8 on page 6 - 9.
11. Replace the bay cover and screws.
12. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

Contact Warning
Be careful not to touch the metal pins on the module’s connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module’s performance.
What to do if you Spill Liquid on the Computer

The keyboard incorporates a drainage system that minimizes the chances of liquid spillages on the keyboard penetrating the inside components of the computer. Liquid spilled on the computer is drained through the drainage hole at the bottom of the computer. There is no guarantee that all water can be prevented from entering the computer, and damage resulting from spillages is not covered in the warranty. However, if you follow the steps outlined here you should be able to prevent water from entering the sensitive parts of the computer and causing damage.

1. If you spill liquid on the computer immediately turn it off and disconnect the AC adapter.
2. Carefully lift the computer up (water will drain through the drainage hole at the bottom of the computer), to prevent water from entering the vents/fan intakes on the bottom of the computer, while keeping it level (do not tilt the computer).

Warranty Warning

Note that the keyboard drainage system is designed to help prevent and minimize damage from liquid spillages on the computer keyboard. However, damage resulting from spillages is not covered in the warranty.

Figure 6 - 10
Lift the Computer Up
Upgrading The Computer

3. Move the computer to a dry place (while keeping it level) and wipe any liquid off the keyboard using a clean, soft, dry cloth.

4. Wipe any remaining liquid off the bottom of the computer.
5. Remove the battery (see “Removing the Battery” on page 6 - 3).
6. Remove the DVD Drive module (see “Upgrading the Optical (CD/DVD) Device” on page 6 - 7) and wipe any wet parts with a clean, soft, dry cloth.
7. Contact your service center to have the computer examined for any problems.
Chapter 7: Modules & Options

Overview
This chapter contains information on the following modules, which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

- Bluetooth Module
- Security Modules (TPM & Fingerprint)
- PC Camera Module
- Wireless LAN Module
- 3.75G/HSPA Module
- GPS Module

Wireless Device Operation Aboard Aircraft
The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.
Bluetooth Module

The operating system’s Bluetooth Devices control panel is used to configure the Bluetooth settings in Windows Vista, and therefore does not require a driver. Use the Fn + F12 key combination (see “Function Keys & Visual Indicators” on page 1 - 11) to toggle power to the Bluetooth module.

Bluetooth Data Transfer

Note that the transfer of data between the computer and a Bluetooth enabled device is supported in one direction only (simultaneous data transfer is not supported). Therefore if you are copying a file from your computer to a Bluetooth enabled device, you will not be able to copy a file from the Bluetooth enabled device to your computer until the file transfer process from the computer has been completed.
Bluetooth Configuration in Windows Vista

Setup your Bluetooth Device so the Computer Can Find it
1. Turn your Bluetooth device (e.g. PDA, mobile phone etc.) on.
2. Make the device discoverable (to do this check your device documentation).

To Turn the Bluetooth Module On
1. Press the \texttt{Fn + F12} key combination to power on the Bluetooth module.
2. A Bluetooth icon will appear in the taskbar (see sidebar).
3. You can then do any of the following to access the \textbf{Bluetooth Devices} control panel.
   - \textbf{Double-click} the icon to access the \textbf{Bluetooth Devices} control panel.
   - Click \texttt{Start}, and click \texttt{Control Panel} (or point to \texttt{Settings} and click \texttt{Control Panel}), and then click \texttt{Bluetooth Devices} (Hardware and Sound).
   - \texttt{Click/Right-click} the icon and choose an option from the menu.

\begin{figure}[h]
\centering
\includegraphics[width=0.6\textwidth]{fig7-1.png}
\caption{Bluetooth Devices & Click Icon Menu}
\end{figure}

\begin{itemize}[noitemsep]
\item Bluetooth Taskbar Icon
If you cannot see the Bluetooth icon in the taskbar, access the Bluetooth Devices control panel. Click Options (tab), and make sure that \texttt{Show Bluetooth icon in the notification area} check box (Connections) has a tick inside it.
Note that you will need to check the LED indicator to see if the module is powered on or not.
\end{itemize}
To Add a Bluetooth Device
1. Access the Bluetooth Devices control panel.
2. Click Options (tab), and make sure that Allow Bluetooth devices to connect to this computer check box (Connections) has a tick inside it.
3. Click Devices (tab), and then click Add.
5. Click to select “My device is set up and ready to be found”, and then click Next.
6. The Wizard will then search for any available Bluetooth devices within range.
7. Click to select the device you want to communicate with, and click Next.
8. Select an appropriate passkey option and click Next.
9. Click Finish.
To Change Settings for the Bluetooth Device

1. Access the Bluetooth Devices control panel.
2. Click on the device you want to change and click Properties to:
   - Change the name of the device (click General, type a new name and click OK).
   - Enable/Disable a service (click Services, clear/tick the check box next to the service and click OK).

To Make your Computer Discoverable to Bluetooth Devices

1. Access the Bluetooth Devices control panel.
2. Click Options, and make sure that Allow Bluetooth devices to find this computer check box (Discovery) has a tick inside it.
3. Make sure that Alert me when a new Bluetooth device wants to connect check box (Connections) has a tick inside it, if you want to be notified when a Bluetooth device wants to connect.

**Bluetooth Help**

To get help on Bluetooth configuration and settings, select Help and Support from the Start menu. Type Bluetooth in the Search Help box, and select an item from the returned search results to get more information.

![Bluetooth Devices Options](image-url)
Security Modules (TPM & Fingerprint)

The encrypted channel between the Trusted Platform Module security chip and the optional fingerprint reader with Protector Suite Software provides a high level of security for your computer. A further level of security and control is provided in the BIOS (see “Security Menu” on page 5 - 11 and “TPM State” on page 5 - 14). Make sure you install the TPM (see “Trusted Platform Module (TPM)” on page 4 - 6) and fingerprint reader (see “Fingerprint Reader” on page 4 - 6) drivers.

The fingerprint reader and Protector Suite Software allow you to:

- Access or Lock your computer
- Protect sensitive files
- Display and file your favorite web pages
- Fill in frequently used dialogs
- Run your favorite applications

The TPM security chip allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Individual users can use the TPM as an authentication with the fingerprint reader.

Password Warning

If you set passwords for any of the security modules, NEVER forget your password.

The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
Trusted Platform Module

Before setting up the TPM functions you must initialize the security platform.

Enabling & Activating TPM

1. Restart the computer.
2. Enter the *PhoenixBIOS Setup Utility* by pressing F2 during the POST.
3. Use the arrow keys to select the *Security* menu.
4. Select *TPM Support* and set the item to *Enabled*.
5. The *TPM State* menu will then appear.

![TPM Support Menu](image)

*Figure 7 - 5 TPM Support*
6. Use the arrow keys to select the **TPM State** menu.
7. Select **TPM State**, and set the item to **Enable & Activate**.

8. Press **F10** to save the changed BIOS information, exit the BIOS and restart the computer.

9. If you make any changes to the TPM State you will be asked to **Execute/Reject** the change after restart ("Physical Presence Operations" on page 5 - 15).

10. You can now **install the TPM driver** (see "Trusted Platform Module (TPM)" on page 4 - 6).
Initializing TPM
1. To initialize the TPM it may be necessary to first clear any existing TPM information if applicable.
2. Enter the PhoenixBIOS Setup Utility by pressing F2 during the POST.
3. Use the arrow keys to select the TPM State menu.
4. Select TPM State, and set the item to Clear.

5. Press F10 to save the changed BIOS information, exit the BIOS and restart the computer.
6. If you make any changes to the TPM State you will be asked to Execute/Reject the change after restart (“Physical Presence Operations” on page 5 - 13).
7. Run the application from the **Infineon Security Platform Solution > Manage Security Platform** item in the **Start > Programs/All Programs** menu.

8. Click **User Settings** (tab) and click **Yes**, or right-click the taskbar icon and select **Security Platform Initialization** (or click the **Security Platform State** taskbar bubble).

9. The **Quick Initialization** method will automatically be selected for you (if you need to use advanced settings provided by your network administrator then select **Advanced Initialization**)

10. You will need to use a removable media (e.g. a USB Flash Drive) to store passwords and data (keep the media in a safe place until required).

11. Select the drive you want to use from the drop-down menu and click **Next**.

---

**Figure 7-8**  
Security Platform Quick Initialization Wizard
12. Click **Next**.
13. Choose the **Security Platform Features** you want to use by clicking the appropriate tickbox.
14. Enter a **Basic User Password** (and re-type to confirm it) and click **Next**.
15. Click **Next** to confirm the settings.
16. The computer will then initialize the settings.
17. Click **Finish**.
18. Click the tabs and control panels to adjust the settings.
19. Double-click the taskbar icon to access the **Infineon Security Platform Settings Tool**, or right-click the taskbar icon and select a menu item.
Infineon Security Platform Settings Tool

The Infineon Security Platform Settings Tool allows you to manage and check the TPM state, manage your password information, and to backup and restore the TPM data. As TPM is usually administered within large enterprises and organizations, your system administrator will need to assist you in managing the information here.

Right-click the taskbar icon to bring up the menu to select Help or How to use the Security Platform Features.

Figure 7 - 10
Infineon Security Platform Settings Tool
Fingerprint Reader Module

The fingerprint reader module provides a high level of security for your computer. Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection.

Before beginning the enrollment process it is recommended that you go through the fingerprint tutorial. To run the tutorial click Start > Programs/All Programs > Protector Suite QL > Fingerprint Tutorial after installing the driver.

Make sure you install the fingerprint reader driver (see “Fingerprint Reader” on page 4 - 6).
User Enrollment
1. Click **Start > Programs/All Programs > Protector Suite > Control Center**, or double click the taskbar icon (click **Initialize**).
2. On the first run of the program you will be asked to click the **Accept** button to accept the license.
3. If you have not set a **Windows** password you will be prompted to do so (**note**: If you have not set a password **Protector Suite** cannot secure access to your computer).
4. Click **Submit** when you have entered password.
5. You will then be prompted to enroll your fingerprints (you can click **Tutorial** to get help with fingerprint enrollment at any time).
6. Click the button above any of the fingers to begin the enrollment process for that finger.
7. Swipe the finger until the progress bar reaches 100% to enroll that finger.
8. Repeat the process for all the fingers you wish to enroll (see sidebar), and then click **Save and Continue**.
9. Enter a backup password and click **Apply**.
10. Close the fingerprint status window.

Figure 7 - 12
Fingerprint Status

Note that it is strongly recommended that you enroll more than one finger in case of injury etc.
11. Right-click the taskbar icon and select Start Control Center (and then swipe a finger) to allow you to Edit Fingerprints, register Applications, edit Settings and access the Help menu etc. You can also run the Control Center etc. from the Protector Suite item in the Programs/All Programs menu.

12. Click “Help” in Control Center Home to get more information on any topic.

13. You can also run the Tutorial, or Product Tour video to get more information.

15. If you swipe your finger over the reader at any time you can access the Biomenu to lock the computer, register websites, access the Personal Safe, E-Wallet or Strong Password Generator, open the Control Center and access the Help menu.

Figure 7 - 13
Control Center & Biomenu
Protector 2009 TPM Initialization

1. Click **Start > Programs/All Programs > Protector Suite > Control Center**, or double click the taskbar icon.
2. Swipe a registered finger or enter the password.
3. Click **Advanced Settings (Control Center Home > Settings)**.
4. Click **Trusted Platform Module (TPM)**.
5. Click **Initialize**.
6. Click **Identity** and then click **Mulifactor** to configure fingerprint authentication along with TPM.
7. Select the method required and click **Apply**.
Fingerprint Control Center Features

**Application Launcher**
The **Application Launcher** allows you to register applications to be launched when assigned to a particular finger. Simply copy the application icon on to one of the registered fingers and ten click OK to close the application window. Once registered the application will launch when you swipe the appropriate finger across the sensor.

**Password Bank**
The **Password Bank** stores registrations of user names, passwords and other settings for web sites etc.

**Strong Password Generator**
The **Strong Password Generator** helps you to create complicated passwords resistant to dictionary attacks from the Internet.

**E-Wallet**
The **E-Wallet** provides biometric security for important personal information such as credit card details, account numbers etc.

**File Safe**
The **File Safe** is an encrypted area assigned on your hard drive that allows you to store files and folders to be protected by fingerprint protection.
PC Camera Module

The PC Camera module uses the **BisonCap** application to capture video files and to take pictures. Before installing the driver, make sure that the optional PC Camera is on.

Before installing the **PC Camera** driver, make sure that the optional PC Camera is on. Use the **Fn + F10** key combination (see “Function Keys & Visual Indicators” on page 1 - 11) to toggle power to the PC Camera module. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3.

Make sure you install the PC Camera driver (see “PC Camera (Optional)” on page 4 - 6).
**Modules & Options**

**PC Camera Audio Setup**

If you wish to capture video & **audio** with your camera, it is necessary to setup the audio recording options in *Windows*.

1. Click **Start**, and click **Control Panel** (or point to **Settings** and click **Control Panel**).
2. Click **Sound** (Hardware and Sound).
3. Click **Recording** (tab).
4. Right-click **Microphone** (Realtek High Definition Audio) and make sure the item is not disabled.
5. Double-click **Microphone** (or select **Properties** from the right-click menu).
6. Click **Levels** (tab), and adjust the **Microphone** and **Microphone Boost** sliders to the level required.
7. Click **OK** and close the control panels.
8. Run the **BisonCap** application program from the **Start** > **Programs/All Programs** > **BisonCam** menu.
9. Go to the **Devices** menu heading and select **Microphone** (Realtek....) (it should have a tick alongside it).
10. Go to the **Capture** menu heading and select **Capture Audio** (it should have a tick alongside it).
Right-click
BisonCap

BisonCap is a video viewer for general purpose video viewing and testing, and for capturing video files to .avi format.

1. Run the BisonCap program from the Start > Programs/All Programs > Bison-Cam menu (it is recommended that you set the capture file before the capture process - see Set Capture File below).
2. Go to the Capture menu heading (if you wish to capture audio check “PC Camera Audio Setup” on page 7 - 20) and select Start Capture.
3. Click OK (the file location will be displayed in the pop-up box) to start capturing the video, and press Esc to stop the capture (you can view the file using the Windows Media Player).

Set Capture File

Prior to capturing video files you may select the Set Capture File... option in the File menu, and set the file name and location before capture (this will help avoid accidentally overwriting files). Set the name and location then click Open, then set the "Capture file size:" and click OK. You can then start the capture process as above.

Pre-Allocating File Space

You may pre-allocate the file size (File > Allocate File Space) for the capture file in the BisonCap program.

Pre-allocating space on the hard disk can improve the capture quality (particularly of large capture files), by reducing the amount of work the hard disk has to do in finding space for the video data as it is being captured.

See also “Reducing Video File Size” on page 7 - 23.

Note the important information in “Reducing Video File Size” on page 7 - 23 in order to save file space, and help prevent system problems.
Reducing Video File Size

Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to My Computer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. CD, DVD or USB Flash drive.

Note that the Windows Vista system requires a minimum of 15GB of free space on the C: drive system partition. In order to prevent system problems it is recommended that you save the captured video file to a location other than the C: drive (see “Set Capture File” on page 7 - 22), limit the file size of the captured video (see “Pre-Allocating File Space” on page 7 - 22) or reduce video resolution (see below).

To Reduce Video Resolution Output Size:

1. Run the BisonCap program.
2. Go to Options and scroll down to select Video Capture Pin....
3. Click the Output Size drop box and select a lower resolution size in order to reduce the captured file size.
Eliminating Screen Flicker
If you find that the video screen in the BisonCap program is flickering, you can try to adjust the setting in the Video Capture Filter options.

1. Run the BisonCap program.
2. Go to Options and scroll down to select Video Capture Filter....
3. Click either 50Hz or 60Hz under Frequency in Property Page (tab).

Figure 7 - 16
Video Capture Filter
**Zoom**
The **BisonCap** program allows you to zoom the camera in and out.

1. Run the **BisonCap** program.
2. Go to **Zoom** and select **Zoom Out/Zoom In**.

**Taking Still Pictures**
The **BisonCap** program allows you to take still pictures.

1. Run the **BisonCap** program.
2. Go to **Options** and select **Take Picture**.
3. The picture (in JPEG format) will be placed in the **Snapshot** folder on the desktop.

*Figure 7 - 17*
**Zoom/Setting**

*Snapshot Folder*
The Snapshot folder's default location is on the desktop. Do not move this folder or an error may appear when you try to take a still picture.

If you accidentally delete or move the folder, you can create a new Snapshot folder on the desktop in order to capture the files.
Wireless LAN Module

If you have included an Intel® Wi-Fi Link 5100/5300 Series (802.11 a/g/n) WLAN module, or 3rd Party 802.11b/g WLAN module in your purchase option, make sure that the Wireless LAN module is on before installing the driver.

Use the **Fn + F11 key combination** (see “Function Keys & Visual Indicators” on page 1 - 11), to toggle power to the Wireless LAN module. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3.

The standard driver installation procedure for the Intel® Wi-Fi Link 5100/5300 Series module is outlined overleaf. If you want to include Intel® My WiFi Technology as part of the installation procedure, DO NOT install the driver as per the instructions overleaf, instead see “Intel® My WiFi Installation & Configuration” on page 7 - 31.

If you have installed the standard driver (as per the instructions overleaf) and wish to enable Intel® My WiFi Technology at a later point you will need to reinstall the driver (choose Unlock from the Drivers Installer menu). Follow the driver installation procedure and choose Modify from the menu when the option appears, and then follow the remaining installation instructions in “Intel® My WiFi Installation & Configuration” on page 7 - 31.
802.11 b/g WLAN Driver Installation
1. Make sure the module is powered on, and then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 1.Wireless Lan > Yes.
4. Choose the language you prefer and click Next.
5. Click Next > Install.
6. Click Finish to complete the installation.
7. The operating system is the default setting for Wireless LAN control in Windows Vista (see overleaf).

Intel® Wi-Fi Link 5100/5300 Series (802.11 a/g/n) Driver Installation
1. Make sure the module is powered on, and then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 1.Wireless Lan > Yes.
4. Click Next > Next.
5. Click the button to accept the license and click Next.
6. Click Next > Next > Finish.
7. The operating system is the default setting for Wireless LAN control in Windows Vista (see overleaf).
Connecting to a Wireless Network

Make sure the Wireless LAN module is turned on.

1. Click the taskbar wireless icon , and then click Connect to a network (or right-click the icon , and then click Connect to a network).

2. In the Show list, click to choose Wireless from the drop-down menu.

3. A list of currently available networks will appear.
4. Click a network, and then click **Connect**.
5. If you do not see a network you want to connect to, click **Set up a connection** or **network** (a list of options will appear allowing manual searching, and creating a new network).

6. Move the cursor over the taskbar icon to see the connection status (see below).

---

**Figure 7 - 20**
Connecting

**Figure 7 - 21**
Connection Status
7. To disconnect from the wireless network you can click the taskbar wireless icon, and then select **Connect or disconnect** to access the network menu, and click **Disconnect** (or right-click the icon, and then click **Disconnect from**).

---

**Security Enabled Networks**

You should try to make sure that any network you are connecting to is a secure network.

Connecting to unsecure networks may allow unauthorized access to your computer, documents, websites and files etc.

---

**Figure 7 - 22**

Disconnecting
Intel® My WiFi Installation & Configuration

Intel® My WiFi Technology uses your WLAN module to allow you to connect up to eight other WiFi enabled devices (e.g. digital cameras, other computers, cell phones, handheld devices etc.) to your computer (similar to Bluetooth), while still connecting to the Internet through your WiFi wireless connection. Intel® My WiFi Technology offers greater range and speed than other personal area networks, and does not require an access point.

Intel® My WiFi Help

To get help on Intel® My WiFi configuration and settings, access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by clicking the taskbar icon. Click the Help icon and select a help topic from the Contents menu.
Intel® Wi-Fi Link 5100/5300 Series My WiFi Driver Installation

If you see the message “Found New Hardware” click Cancel to close the window.

1. Make sure the module is powered on, then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 1.Wireless Lan > Yes.
4. Click Next > Next.
5. Click the button to accept the license and click Next > Next.
6. Click Custom (button) and click Next.
7. Click Intel(R) My WiFi Technology (button) and select “This feature will be installed on local hard drive.”

8. Click Next > Finish.
Intel® My WiFi Configuration
You can configure the My WiFi settings as follows.

1. **Access the Intel® My WiFi Utility** from the **Start** menu (**Start** > **Programs/All Programs** > **Intel PROSet Wireless** > **Intel My WiFi Technology**), or by clicking the taskbar icon 📋.
2. **Click Enable** 🌟 (on the first run of the program there will be no connected devices listed).

![Figure 7 - 24 Intel® My WiFi Utility](image)
3. Click Start, and click Control Panel (or point to Settings and click Control Panel).
4. Click Network and Sharing Center (Network and Internet).
5. Click Manage Network Connections.

6. Right-click Intel My WiFi STA (Station) in Network Connections and select Properties.
7. Click **Sharing (tab)** and select “**Allow other network users to connect through this computer’s Internet connection**”.
8. Select **Intel My WiFi PAN** under **Home Networking Connection**.
9. Click **OK**.

Click “**Allow other network users to connect through this computer’s Internet connection**”.

Select **Intel My WiFi PAN**.

---

*Figure 7 - 27*
Intel WiFi STA Properties - Sharing
10. A message will appear to inform you that the LAN adapter will be set to use the IP address 192.168.0.1.
11. Click Yes to enable Internet Connection Sharing.
12. Access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by clicking the taskbar icon.
13. Click Profiles.
14. Click Profiles, click Intel Wireless PAN and click Edit.

15. You can change the Profile Name and Network Name to your personal preferences in General (tab).

Profile and Network Names

The Profile Name is the name as displayed on your computer in the Network Connections control panel (see Figure 7 - 26 on page 7 - 34).

The Network Name (SSID) is the name the devices see when they try to connect to your computer.
16. Click **Security** (tab).
17. Change the **Security Type** to **WEP** and the **Encryption Type** to **64bit**.
18. Enter a password (5 characters long) in the **Passphrase** box.
19. Click **OK**.
20. Click **Sharing** (tab).
21. Make sure **Filter Network Traffic** and **DHCP and DNS Server** are **Disabled**.
22. Click **OK**.

![Profile Settings](Image)

*Figure 7 - 33
Intel® My WiFi Profile Settings - Sharing*

- Set **Filter Network Traffic & DHCP and DNS Servers** to **Disabled**.
23. Click Advanced (tab).
24. Make sure the Default Channel is set to Channel 1, 6 or 11.
25. Click OK.
26. Double-click **Intel My WiFi PAN** (Personal Area Network) in **Network Connections**.
27. Click **Details** to display the **Network Connection Details**.

![Network Connections screenshot with Intel My WiFi PAN highlighted]

*Figure 7-35 Intel My WiFi PAN Network Connection Details (Network Connections)*
28. Access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by clicking the taskbar icon.

29. To add a new device follow the instructions in the devices’ user guide for connecting to a WiFi network.

30. Click Add New Device in Intel® My WiFi Utility to confirm the security settings.

Figure 7 - 36
Intel® My WiFi Utility
(Add New Device)
Windows Mobility Center
The Windows Mobility Center control panel provides an easy point of access for information on battery status, power plans used and wireless device status etc.

To access the Windows Mobility Center:
1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Double-click Windows Mobility Center (Mobile PC).
3. Click the button to Turn wireless off/on, or click the icon to access the network menu.

Figure 7 - 37
Windows Mobility Center
If you have included an optional 3.75G/HSPA (High Speed Packet Access) module (see “Communication” on page A - 3 for specification details) in your purchase option, you will have the appropriate software provided for your module. Follow the instructions on page 7 - 46 to install the USIM card (supplied by your service provider), and then install the appropriate application. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3.

**Important Notice**

If your purchase option includes both Wireless LAN and 3.75G/HSPA modules, then the appropriate antennas will be installed. Note that in order to comply with FCC RF exposure compliance requirements, the antenna must not be co-located or operate in conjunction with any other antenna or transmitter.
Before installing the application, make sure that the 3.75G/HSPA module is ON (installing the driver with the module off will not allow the software to detect the module hardware correctly). Use the \textit{Fn + } key combination (see Table 1 - 5, on page 1 - 15) to toggle power to the 3.75G/HSPA module. When the 3.75G/HSPA module is powered on, the indicator will briefly be displayed. \textbf{Note that exiting the application does NOT turn off the 3.75G/HSPA module.}

- \textbf{3G Watcher} - See “3G Watcher Application” on page 7 - 48 for driver installation information and “Setting Up a Carrier Profile” on page 7 - 49 for instructions on using the 3G Watcher application.

- \textbf{HSPA Modem Interface} - See “HSPA Modem Interface Installation” on page 7 - 55 for driver installation information and “HSPA Modem Interface” on page 7 - 56 for instructions on using the HSPA Modem Interface.

- \textbf{Mobile Partner} - See “Mobile Partner Application Installation” on page 7 - 64 for driver installation information and “Mobile Partner Application” on page 7 - 65 for instructions on using the Mobile Partner application.

\textbf{3.75G/HSPA Modules & System Wake Up}

Note that the 3.75G/HSPA modules \textbf{DO NOT} support system wake up on 3.75G/HSPA modem activity.
USIM Card Installation
1. Turn the computer **off**, and turn it over.
2. Slide the latch  in the direction of the arrow.
3. Slide the latch  in the direction of the arrow, and hold it in place.
4. Slide the battery out in the direction of the arrow **3**.

*Figure 7 - 38 Battery Removal*
5. Insert the USIM card as illustrated below until it clicks fully into position, and replace the battery.

Figure 7-39
USIM Card Insertion
3G Watcher Application

With the 3.75G/HSPA module and USIM card (provided by your service provider) installed you may then install the 3G Watcher application. The 3G Watcher application allows you to directly access your 3.75G internet service from the computer.

3G Watcher Application Installation

1. Enable power to the module by pressing the Fn + key combination (the on screen icon will indicate the module’s power status).
2. If a Found New Hardware window appears, click Cancel.
3. Click Option Drivers (button).
4. Click 2.3.5G Generation Module > Yes, and then click Next.
5. Click the button to accept the license agreement, and then click Install.
6. When the next screen appears wait (for about 2 minutes) until you see the message “Your devices are ready to use” in the taskbar before clicking Finish (this allows the hardware to detect the 3.75G module).
7. Access the 3G Watcher application from the Start menu (Start > Programs/All Programs > Sierra Wireless > 3G Watcher), or by double-clicking the desktop icon.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the Fn + key combination to toggle power to the 3.75G/HSPA module, and check the indicator to see if the module is powered on or not (see Table 1 - 3, on page 1 - 11/Table 1 - 2, on page 1 - 9).
Setting Up a Carrier Profile

Although the connection information is stored on the USIM card supplied by the service provider, you may need to set up the appropriate carrier profile in 3G Watcher.

1. Power on the 3.75G/HSPA module using the Fn + key combination.
2. Access the 3G Watcher application from the Start menu (Start > Programs/All Programs > Sierra Wireless > 3G Watcher), or by double-clicking the desktop icon.
3. Click Tools and select Options.
4. Click Profiles and then click the Add new profile button, and select WWAN profile.

Figure 7 - 40
Add WWAN Profile
5. You can then enter a new profile name or choose a profile from the drop-down list provided by the software (see the *sidebars* for information on the profile details).

6. Click **Apply > OK** to save the information.

7. You can choose the profile from the pull-down menu.
Connecting to the Service Provider

1. Power on the 3.75G/HSPA module using the Fn + key combination.
2. You can access the 3G Watcher application from the Start menu (Start > Programs/All Programs > Sierra Wireless > 3G Watcher), or by double-clicking the desktop icon.
3. The software will run and display the service provider name (see “Setting Up a Carrier Profile” on page 7 - 49).
4. Click Connect to begin the connection process.
5. The 3G Watcher application will then display the connection information in the window.
6. When the connection is successful a taskbar notification will appear (as below).

7. You can then access the internet, download e-mail etc. as per any internet connection.

8. While you are connected the taskbar icon will be green (it will be red when the program is running but not connected).

9. To disconnect click the **Disconnect** icon.

10. The program will disconnect from the service provider.

11. The module will still be on, and you will need to press the **Fn + *** key combination to turn it off.
12. If you click the **3G Watcher** close icon a message will be displayed asking you to click **OK** to confirm the program exit.

![Exit Warning](image)

13. Exiting the program **DOES NOT** turn off the 3.75G/HSPA module, and you will need to press the **Fn + (`)** key combination to turn off the module (pay careful attention to this aboard aircraft - see “Wireless Device Operation Aboard Aircraft” on page 7 - 48).

14. If the module is on and the computer enters a power-saving state, then the power status of the module on resuming from the power-saving state will be as below:

- If the 3.75G/HSPA module is on and the computer is **Shut Down or Restarted**; the module will be **off** when the computer starts up.
- If the 3.75G/HSPA module is on and the computer enters **Sleep or Hibernate**; the module will be **off** when the computer resumes from sleep.
Short Messaging Service
In addition to standard internet services you may also send and receive SMS text messages using the 3G Watcher program, if your service supports SMS.

Reading SMS Messages
1. The SMS message indicator in the main window will notify you of any new messages received.
2. Double-click the icon or select Tools > SMS Express.
3. Select the inbox folder and select any message to read it.
4. You cannot receive any new messages if the USIM card becomes full, so you will need to delete some of the messages in order to free up space on the USIM card.

Creating and Sending SMS Messages
1. Double-click the icon or select Tools > SMS Express.
2. Select File > New Message or click the New button.
3. Enter the recipient's number in the To.. field or click the To.. button to select an entry from the phone book, and click the Message button.
4. Type in the message details in the message body area.
5. Click the Send button (or save the message to send later).

For more details on SMS see 3GWatcher Online Help from the Help > Help Topics menu.
HSPA Modem

With the 3.75G/HSPA modem module and USIM card (supplied by your service provider) installed you may then install the HSPA modem interface. The HSPA modem interface application allows you to directly access your HSPA internet service from the computer.

HSPA Modem Interface Installation

1. Enable power to the module by pressing the **Fn + ** key combination (the on screen icon will indicate the module’s power status).
2. If a *Found New Hardware* window appears, click **Cancel**.
3. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
4. Click **Option Drivers** (button).
5. Click **2.3.5G Generation Module > Yes**, and then click **Next**.
6. Click **Next > Install**.
7. Click **Finish** to restart the computer.
8. Access the **HSPA modem** interface from the **Start** menu (**Start > Programs/All Programs > HSPA modem**), or by double-clicking the **HSPA modem** icon on the desktop.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the **Fn + ** key combination to toggle power to the 3.75G/HSPA module, and check the indicator to see if the module is powered on or not (see Table 1 - 3, on page 1 - 11 / Table 1 - 2, on page 1 - 9).
HSPA Modem Interface

The connection information is stored on the USIM card supplied by the service provider.

1. Power on the 3.75G/HSPA modem module using the Fn + key combination.
2. Access the HSPA Modem interface from the Start menu (Start > Programs/All Programs > HSPA Modem > HSPA Modem), or by double-clicking the desktop icon.
3. If a USIM card is not installed then a message will appear to notify you of this (click OK to close the message and install the USIM card).
4. If you are required to enter a pin # then a message will appear to prompt you to enter a pin #. (Note: to change pin # go to Settings and click OK in PIN code.)
5. Click the Network connection button and the HSPA Modem interface window will display Connection Manager.

Connection Manager

The connection information is commonly stored on the USIM card supplied by the service provider. However if your service provider requires details such as IP Address, Username and Password etc. to be entered before connection you can enter them in the Connection Manager tab, or save the details in Profiles.
6. Click **Connect** to connect to your service provider.

7. The message "**Network is connected**" will be displayed when the network connection is successful.

8. You can then access the internet, download e-mail etc. as per any internet connection.
9. While you are connected the upper right corner of the HSPA Modem interface will display the upload and download rates, and the taskbar icon will display the connection speed.

10. To disconnect click the Disconnect icon (Connection Manager).

11. The program will disconnect from the service provider.

12. The module will still be on, and you will need to press the **Fn +`** key combination to turn it off.

### Adding a Profile

1. Access the HSPA Modem interface from the Start menu (Start > Programs/All Programs > HSPA Modem > HSPA Modem), or by clicking the desktop icon.

2. Click the Network connection, and click Profiles (tab).
3. Click **Add** (button) and input any **Network Settings** required by your service provider.
4. Click **OK** to save the profile.

5. You can **Edit** or **Delete** profiles from the **Profiles** tab.
6. To use a profile click to select it, and then click **Apply** (button) and the settings will be transferred to **Connection Manager**.
Contacts

1. Access the HSPA Modem interface from the Start menu (Start > Programs/All Programs > HSPA Modem > HSPA Modem), or by clicking the desktop icon.
2. Click Contacts (button).

3. Click Refresh (button) to download the contacts from the USIM card to the computer.
4. The Contacts will then be displayed.
5. Double-click any contact to edit the information (or right-click and select Edit).
6. You can also Export/Import contacts by clicking the appropriate button.
Messages
1. Access the HSPA Modem interface from the Start menu (Start > Programs/All Programs > HSPA Modem > HSPA Modem), or by clicking the desktop icon.
2. Click Messages (button).
3. Click Refresh (button) to download the messages from the USIM card to the computer.
4. Click New (button) to create a new message.
5. You can either type the telephone number in the recipient field, or press To (button) to select the contact from the list.

In addition to standard internet services, you may also send and receive SMS text messages using the HSPA Modem interface, if your service supports SMS.
6. Click to select a contact from the list and then click **Add** (button) and the phone number will automatically be added to the recipient field.
7. Type the message information into the message body and click **Send** (button) to send it, or **Save to draft** (button) to save the message.
8. Select any message to **forward** or **delete** it, or to **reply** to it.

**Settings**

1. Access the **HSPA Modem** interface from the **Start** menu (**Start** > **Programs/All Programs** > **HSPA Modem** > **HSPA Modem**), or by clicking the desktop icon.
2. Click **Settings** (button).
3. Click OK alongside any of the options to configure the settings.
4. The Network can be configured for an Automatic (usually from the USIM card) or Manual connection.
5. The Network Mode can be configured for any appropriate mode required.

6. You can also change your settings for the Pin #, and input your phone number.
7. Exiting the program DOES NOT turn off the 3.75G/HSPA modem module, and you will need to press the Fn + key combination to turn off the module (pay careful attention to this aboard aircraft - see “Wireless Device Operation Aboard Aircraft” on page 7 - 55).
8. If the module is on and the computer enters a power-saving state, then the power status of the module on resuming from the power-saving state will be as below:

   • If the 3.75G/HSPA modem module is on and the computer is Shut Down or Restarted; the module will be off when the computer starts up.
   • If the 3.75G/HSPA modem module is on and the computer enters Sleep or Hibernate; the module will be off when the computer resumes from sleep.

Figure 7 - 57
Settings - Network/Network Mode
Mobile Partner

With the **3.75G/HSPA** module and USIM card (supplied by your service provider) installed you may then install the **Mobile Partner** application. The **Mobile Partner** application allows you to directly access your HSPA internet service from the computer.

**Mobile Partner Application Installation**

1. Enable power to the module by pressing the **Fn + ▼** key combination (the on screen icon \( \text{\textcopyright} \) will indicate the module’s power status).
2. If a **Found New Hardware** window appears, click **Cancel**.
3. Click **Option Drivers** (button).
4. Click **2.3.5G Generation Module > Yes**.
5. Choose the language you prefer and click **OK**.
6. Click **I Agree** (button) to accept the license agreement.
7. Click **Next > Install**.
8. Click **Finish** to restart the computer.
9. Access the **Mobile Partner** application from the **Start** menu (**Start > Programs/All Programs > Mobile Partner**), or by double-clicking the **Mobile Partner** icon on the desktop.
Mobile Partner Application
You will need to contact your service provider to obtain the exact details of how exactly to configure the settings on this page.

Profile Management
1. Power on the 3.75G/HSPA module using the Fn + $ key combination.
2. Access the Mobile Partner application from the Start menu (Start > Programs/All Programs > Mobile Partner), or by double-clicking the Mobile Partner icon on the desktop.
3. If you have not created a profile, click Tools and select Options, and then click Profile Management.
4. Click New and input the appropriate information for Profile Name, APN and Authentication etc. as supplied by your service provider.
5. Click Save to save the profile.

Figure 7 - 58
Profile Management
Connecting to the Service Provider
1. Power on the 3.75G/HSPA module using the Fn + key combination.
2. Access the Mobile Partner application from the Start menu (Start > Programs/All Programs > Mobile Partner), or by double-clicking the Mobile Partner icon on the desktop.
3. The software will run and you can select the Profile Name from the menu.
4. Click Connect to begin the connection process.

Figure 7-59
Connect

5. The Mobile Partner application will then display the connection information.

Figure 7-60
Network Connection Prompt
6. When the connection is successful you can move the cursor over the network icon in the taskbar to display the connection information.

7. You can then access the internet, download e-mail etc. as per any internet connection.

8. While you are connected the indicators in the Mobile Partner window will display uploading and downloading icons and a network icon in the taskbar.

9. To disconnect click the **Disconnect** icon, or right click the taskbar icon and select **Disconnect**.

10. The program will disconnect from the service provider.
11. The module will still be on, and you will need to press the **Fn + ** key combination to turn it off.

12. If you click the **Mobile Partner** close icon a message will be displayed asking you to click **OK** to confirm the program exit and to **terminate the connection**.

13. Exiting the program terminates the connection, but DOES NOT turn off the 3.75G/HSPA module, and you will need to press the **Fn + ** key combination to turn off the module (pay careful attention to this aboard aircraft - see “Wireless Device Operation Aboard Aircraft” on page 7 - 64).

14. If the module is on and the computer enters a power-saving state, then the power status of the module on resuming from the power-saving state will be as below:

   - If the 3.75G/HSPA module is on and the computer is **Shut Down or Restarted**; the module will be **off** when the computer starts up.
   - If the 3.75G/HSPA module is on and the computer enters **Sleep or Hibernate**; the module will be **off** when the computer resumes from sleep.

---

**Figure 7 - 63**

Exit Prompt
GPS Module

If you have included an Global Positioning System (GPS) receiver module in your purchase option, you will need to obtain map software suitable for your global location. Map software programs are both commercially available and downloadable directly from the internet.

A Global Positioning System satellite continually transmits high-frequency radio signals containing the time and location of the satellite in relation to the earth. Your computer’s GPS receiver obtains information from satellites and calculates your current position on the planet (to an accuracy of between 3 and 15 meters).

For the best quality signal use the optional antenna and screw the antenna into the GPS Active Aerial Socket on the right of the computer (see “System Map: Right View” on page 1 - 14).
Chapter 8: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Troubleshooting

Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a **power strip**, make sure it is actually working. Check the **LED Power & Communication Indicators** (see “LED Indicators” on page 1 - 9) to see the computer’s power status.

- **Connections** - Check all the **cables** to make sure that there are no **loose connections** anywhere.

- **Power Savings** - Make sure that the system is not in **Hibernate** or **Sleep** mode by pressing the keys configured in your **Power Options** (see “Power-Saving States” on page 3 - 6), the **Fn + F4** key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the **Fn + F8 and F9** keys to adjust the brightness.

- **Display Choice** - Press **Fn + F7** to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no **optical media and/or USB storage devices** in any connected drive (this is a common cause of the message “Invalid system disk - Replace the disk, and then press any key” / “Remove disks or other media. Press any key to restart”).

---

8 - 2 Basic Hints and Tips
Backup and General Maintenance

- Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

- Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Supervisor** password for the BIOS (see “The Power-On Self Test (POST)” on page 5 - 2).

- Keep copies of vital **settings files** such as network, dialup settings, mail settings etc.(even if just brief notes).

---

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Troubleshooting

Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Bootable CD-ROM/DVD-ROM/USB storage device” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Upgrading and Adding New Hardware/Software

- Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

- Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

- Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

- When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

- Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

• Thoroughly check any recent changes you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

• Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; Example - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.
## Troubleshooting

### Problems and Possible Solutions

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You turned on the <strong>power</strong> but it doesn’t work.</td>
<td><em>Battery missing / incorrectly installed.</em> Check the battery bay, make sure the battery is present and seated properly (the design of the battery only allows it to go in one way). Make sure there’s nothing interfering with the battery contacts.</td>
</tr>
<tr>
<td>The battery <strong>LED power indicator</strong> 🟢, is blinking orange.</td>
<td><em>Low Battery.</em> Plug in the DC power source. If the computer doesn’t start up immediately, turn it off then on again.</td>
</tr>
<tr>
<td>You are <strong>losing battery power</strong> too quickly.</td>
<td><em>The system is using too much power.</em> If your OS has a <strong>Power Options</strong> scheme (see “Power Plans” on page 3 - 4/“Power Schemes” on page D - 19) check its settings. You may also be using an ExpressCard/USB device/external device that is drawing a lot of power.</td>
</tr>
</tbody>
</table>
| Actual **battery operating time** is shorter than expected.           | *The battery has not been fully discharged before being recharged.* Make sure the battery is fully discharged and recharge it completely before reusing (see “Battery Information” on page 3 - 10/“Battery Information” on page D - 24).  

*Power Options have been disabled.* Go to the **Control Panel** in Windows and re-enable the options.  

*A peripheral device/USB device/ExpressCard is consuming a lot of power.* Turn off/remove the unused device to save power. |

</thead>
</table>
| The Hibernate function has disappeared. | You have a computer with 4GB of RAM and have installed Windows Vista Service Pack 1. This is a known issue if your computer has 4GB of RAM and is running Windows Vista Service Pack 1. To re-enable Hibernate mode go to the Command Prompt and type the command “`powercfg -h on`” (make sure you are logged on as an Administrator):  
1. Click **Start** (menu button).  
2. Type “`cmd`” in the **Start Search** box.  
3. Double click the **Command Prompt** when it appears in the menu.  
4. Type “`powercfg -h on`” in the Command Prompt window.  
5. Close the Command Prompt window.  
6. The Hibernate function will now be enabled. |

---

8 - 12 Problems and Possible Solutions
Troubleshooting

Screen Resolution Error

If you are experiencing either screen resolution reduction, or screen flickering after resuming from Sleep in Windows Vista only then follow the instructions below to fix this problem. This error arises in compliance with Windows Vista policy, which triggers TMM (Transient Multi-Monitor Manager) when the notebook lid (S3) is closed. TMM disconnects the LCD display from the OS and then adds the LCD display back when the lid is opened. This may trigger TMM to restore an old display setting which may result in screen flickering or a screen resolution change. To fix this problem you will need to disable TMM in the OS:

1. Go to the Control Panel in the Windows OS and double-click the Administrative Tools icon (System and Maintenance).
2. Double-click Task Scheduler (Schedule Tasks).

*Figure 8 - 1 - Control Panel System and Maintenance*
Troubleshooting

3. Double-click **Task Scheduler Library > Microsoft > Windows**.
4. Click **MobilePC** to open the control panel.
5. Right-click **TMM** and select **Disable**.

6. Close all the control panels.

---

**Figure 8 - 2 - TMM Disable**

Appendix A: Interface (Ports & Jacks)

Overview
The following chapter will give a quick description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
## Interface (Ports & Jacks)

### Notebook Ports and Jacks

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Card Reader Port</td>
<td>The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device.</td>
</tr>
<tr>
<td><strong>MMC / SD / MS</strong></td>
<td></td>
</tr>
<tr>
<td>DC-In Jack</td>
<td>Plug the supplied AC/DC adapter into this jack to power your computer.</td>
</tr>
<tr>
<td>External Monitor (VGA) Port</td>
<td>This port allows you to connect an external monitor, or Flat Panel Display, to get dual video or simultaneous display on the LCD and external monitor/FPD.</td>
</tr>
<tr>
<td><strong>Monitor</strong></td>
<td></td>
</tr>
<tr>
<td>Headphone-Out Jack</td>
<td>Headphones or speakers may be connected through this jack. <strong>Note:</strong> Set your system’s volume to a reduced level before connecting to this jack.</td>
</tr>
<tr>
<td>Microphone-In Jack</td>
<td>Plug an external microphone in to this jack to record on your computer.</td>
</tr>
<tr>
<td>RJ-45 LAN Jack</td>
<td>This port supports LAN (Network) functions.  <strong>Note:</strong> Broadband (e.g. ADSL) modems usually connect to the LAN port.</td>
</tr>
</tbody>
</table>
## Interface (Ports & Jacks)

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Security Lock Slot</td>
<td>To prevent possible theft, a Kensington-type lock can be attached to this slot. Locks can be purchased at any computer store.</td>
</tr>
<tr>
<td>Serial (COM1) Port</td>
<td>The serial communication port allows you to connect various RS232 supported devices to the computer. Serial ports are still used in legacy applications e.g. industrial automation systems.</td>
</tr>
<tr>
<td>S/PDIF-Out Jack</td>
<td>This S/PDIF (Sony/Philips Digital Interface Format) Out Jack allows you to connect your DVD-capable PC to a Dolby AC-3 compatible receiver for “5.1” or ‘dts’ surround sound.</td>
</tr>
<tr>
<td>USB 2.0/1.1 Ports</td>
<td>These USB 2.0 compatible ports (USB 2.0 is fully USB 1.1 compliant) are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device).</td>
</tr>
</tbody>
</table>
Appendix B: Intel Video Driver Controls

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 17.

Intel Video Driver Installation

Make sure you install all the drivers in the order indicated in Table 4 - 1, on page 4 - 3.

Video
1. Insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Install Drivers.
3. Click 2.Install Video Driver > Yes.
4. Click Next > Yes > Next > Next.
5. Click Finish to restart the computer.

Dynamic Video Memory Technology
Intel® DVMT automatically and dynamically allocates as much (up to 256MB) system memory (RAM) as needed to the video system (the video driver must be installed). DVMT returns whatever memory is no longer needed to the operating system.
Intel Graphics Properties

More advanced video configuration options are provided by the Intel(R) Graphics Media Accelerator Driver for Mobile.

1. Open the Display Settings control panel (see “Video Features” on page 1 - 17) and click Advanced Settings (button).
2. Click the Intel(R)... tab and click Graphics Properties (button).

Taskbar Icon

The Intel GMA control panel can also be accessed by clicking the icon in the taskbar and selecting Graphics Properties from the menu.

If you cannot see the tray icon click the “Show Tray Icon” tickbox in the Intel(R) Graphics Media Accelerator for Mobile tab.

Figure B - 1
Intel Graphics Properties
You may make changes to the devices, color, schemes, **Hot Keys** etc. by clicking the appropriate menu item or button.

**Help Menus**

Right-click on many of the items in the tabs to bring up the “What’s This?” button.

Click the “What’s This?” button to bring up the help menu.

**Operating Mode**

At least one other display must be attached in order to view **Display Selection** options.

---

**Figure B - 2**

Intel Graphics Media Accelerator Driver for mobile
(Control Panel Tabs)
Scheme Options
Use Scheme Options to configure quick settings for applications which require specific resolution and color settings in order to run properly e.g. games, multimedia programs. To set the scheme options:

1. Open the Display Settings control panel and click Advanced Settings (button).
2. Click the Intel(R)... tab and click Graphics Properties (button).
3. Configure your display configuration, resolution etc. as per your requirements from Display Settings.
4. Click on Scheme Options (button).
5. Type a name for the scheme then click Save.
6. Click the tickbox “Automatically launch an application when the scheme is applied” If you want to run a scheme when opening an application.
7. Click Browse to find the executable file for the application you want to set the scheme for (see sidebar), and click Open to select it.
8. Click Save (Save > OK) to save the settings (you can click in the “Restore the display settings after exiting this application” box to return to your original settings when you exit the program).
9. Click OK to exit the window.
10. Click the taskbar icon and Select Scheme to run it.

Application.exe
You will need to locate the actual application executable (.exe) file, not just the shortcut. To find the application right-click its shortcut on the desktop click Properties. Click the Shortcut (tab) and see where the executable file is located by clicking the Find Target (button). Note the location and you will then be able to browse to this file.

Figure B - 3
Select Scheme
Attaching Other Displays

Besides the built-in LCD, you can also use an external monitor/flat panel display, connected to the external monitor port at the rear of the computer, as your display device. The following are the display options:

1. The built-in LCD OR an external monitor/flat panel display connected to the external monitor port (Single Display).
2. The built-in LCD AND an external monitor/flat panel display connected to the external monitor port (Multiple Display).

Configuring from Windows Vista
1. Attach your external display to the external monitor port, and turn it on.
2. If a New Display Detected window does not appear in Windows Vista, go to the Windows Mobility Center control panel (Mobile PC > Adjust commonly used mobility settings) and click Connect display.
3. Click on any of the buttons to configure the displays to your preference, or click Display Settings to access the control panel.

Function Key Combination
You can use the Fn + F7 key combination to toggle through the display options:
- Notebook Only
- External Display Only
- Notebook + External Display

Make sure you give the displays enough time to refresh.

Figure B - 4
Windows Mobility Center
Operating Mode
At least one other display must be attached in order to view Display Selection options.

Figure B - 5
Display Devices

Configuring from Intel® GMA Driver for Mobile
1. Go to the Intel Graphics Properties control panel (see “Intel Graphics Properties” on page B - 2) and click Display Devices.
2. Click to choose the display option from the Operating Mode menu.
3. Click Apply (and OK to confirm the settings change) and OK (button).
Display Modes

Single Display
Only one of your attached displays is used.

Intel(R) Dual Display Clone (mirrored)
This mode will drive multiple displays with the same content. Each device may be configured independently for different resolutions, refresh rates, color quality etc. Use this feature to display the screen through a projector for a presentation.

Extended Desktop (extended)
This mode allows a desktop to span multiple displays and acts as a large workspace. This creates a lot more screen area for display. Use the Display Properties control panel to drag the monitors to match the physical arrangement you wish to use, or you may also use the Extended Desktop Settings control panel tab in Graphics Properties to configure the relative size and position.
To Enable Intel(R) Dual Display Clone
1. Attach your external monitor to the external monitor port, and turn it on.
2. Go to the Intel Graphics Properties control panel (see “Intel Graphics Properties” on page B - 2) and click Display Devices.
3. Click to choose Intel(R) Dual Display Clone (Operating Mode).
4. Click Apply, and OK to confirm the settings change.
5. Click Display Settings to adjust the settings for the attached devices.

Figure B - 6
Display Devices & Settings
To Enable Extended Desktop

1. Attach your external monitor to the external monitor port, and turn it on.
2. Go to the Intel Graphics Properties control panel (see “Intel Graphics Properties” on page B - 2) and click Display Devices.
3. Click to choose Extended Desktop (Operating Mode).
4. Click Apply, and OK to confirm the settings change.
5. Click Display Settings to adjust the settings for the attached devices.

- Click the appropriate monitor icon and drag it to match the physical arrangement you wish to use (e.g. the secondary display may be extended left/right/above/below the primary display).
- Click Display Settings to make any adjustments required.
Using Windows Vista to Enable Extended Mode
1. Attach your external display to the external monitor port, and turn it on.
2. If a New Display Detected window does not appear in Windows Vista, go to the Windows Mobility Center control panel (Mobile PC > Adjust commonly used mobility settings) and click Connect display.
3. Click to select Show different parts of my desktop on each display (extended).
4. Click Right or Left under Extend your desktop.
5. Click Apply > OK.

Display Settings Extended Desktop
Use the control panel to drag the monitors to match the physical arrangement you wish to use.

You can drag any icons or windows across to either display desktop, which makes it possible to have one program visible in one of the displays, and a different program visible in the other display.

Figure B - 8
Display Properties (Extended Desktop)
Using Display Settings to Enable Extended Mode

1. Attach your external display to the external monitor port, and turn it on.
2. Open the Display Settings control panel (see “Video Features” on page 1 - 17).
3. Click the monitor icon (e.g. 2), and make sure you have checked “Extend my Windows desktop onto this monitor.” and click Apply.

Click the appropriate monitor icon (e.g. 2) to be able to select the option to extend the desktop on to it.

In this example the Primary Display 1 is on the left, the Secondary Display 2 is on the right.
Intel Clear Video Technology

Intel Clear Video Technology is designed to help users get high-quality video playback, sharp image quality, precise color control and advanced support for the latest High Definition displays without the need for expensive video cards etc.

1. Attach your external display to the external monitor port.
2. Go to the Intel(R) GMA Driver for mobile control panel (see “Intel Graphics Properties” on page B - 2) and configure your external display as the Single display from the Operating Mode menu.
3. Click Intel(R) TV Wizard Intel(R) GMA Driver for mobile control panel.
4. The wizard will now take you through the steps to set up high quality video support for your external display (configure in either Automatic or Manual modes).

TV Wizard

Use the TV Wizard to configure the external display settings either manually or automatically.

The wizard will take you through any necessary steps in order to configure the optimal video settings e.g HDTV Format, Display Size and Position etc.

Figure B - 10
Intel® TV Wizard

Appendix C: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer’s release schedule. Check with your service center for details.

## Specifications

### Interface
- Three USB 2.0 Ports
- One Serial (COM1) Port
- One External Monitor Port
- One Headphone-Out Jack
- One Microphone-In Jack
- One S/PDIF-Out Jack
- One RJ-45 LAN Jack for 10/100/1000Mb Fast Ethernet
- One DC-In Jack

### Card Reader
- Embedded 7-in-1 Card Reader (MS/ MS Pro/ SD/ Mini SD/ MMC/ RS MMC/ MS Duo)  
  **Note:** MS Duo/ Mini SD/ RS MMC Cards require a PC adapter

### Slots
- One ExpressCard/34/54 Slot  
  **Two Mini-Card Slots with USB & PCIe interface:**  
  Slot 1 for Half Mini-Card WLAN Module  
  Slot 2 for 3.75G Module (Factory Option)

### Communication
- Built-In 10M/100M/100M Base-TX Ethernet LAN
- Bluetooth 2.1 + EDR (Enhanced Data Rate) Module (Factory Option)
- Intel® WiFi Link 5300 Series (3*3 - 802.11a/g/n) Wireless LAN PCIe interface Half Mini-Card Module (Option)
- Intel® WiFi Link 5100 Series (1*2 - 802.11a/g/n) Wireless LAN PCIe interface Half Mini-Card Module (Option)
- 3rd Party 802.11b/g Wireless LAN PCIe interface Half Mini-Card Module (Option)
- 2.0M or 3.0M Pixel PC Camera Module with USB interface (Factory Option)
- 3.75G Module:  
  UMTS/HSPA-based 3.75G Module with Mini-Card Interface (Factory Option)  
  Quad-band GSM/GPRS (850 MHz, 900 MHz, 1800 MHz, 1900 MHz)  
  UMTS WCDMA FDD (2100 MHz)  
  **Note that UMTS modes CAN NOT be used in North America**
- GPS Module without Internal Antenna (Factory Option)

### Power Management
- Supports Wake on LAN
- Supports Wake on Modem Ring

### Power
- Full Range AC/DC Adapter  
  AC input 100 - 240V, 50 - 60Hz,  
  DC Output 19V, 3.42A or 18.5V, 3.5A (65 Watts)  
  4 Cell Smart Lithium-Ion Battery Pack, 2600mAH  
  8 Cell Smart Lithium-Ion Battery Pack, 5200mAH (Option)

### Security
- Security (Kensington® Type) Lock Slot  
- Fingerprint ID Reader Module  
- BIOS Password  
- Trusted Platform Module V1.2

### Operating System
- Windows® Vista (with Service Pack 1)  
- Windows® XP (with Service Pack 3)

C - 4 Specifications
Appendix D: Windows XP Information

This Appendix contains information (including control panel information, driver installation etc.) for users of the *Windows XP OS*. 
DVD Regional Codes

Changing DVD Regional Codes

Go to the Control Panel and double-click System > Hardware (tab), click Device Manager, then click the + next to DVD/CD-ROM drives. Double-click on the DVD-ROM device to bring up the Properties dialogue box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code.

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer.

Table D - 1 - DVD Region Codes

Figure D - 1 - DVD Regions
Windows XP Start Menu & Control Panel

Most of the control panels, utilities and programs within Windows XP (and most other Windows versions) are accessed from the Start menu. When you install programs and utilities they will be installed on your hard disk drive, and a shortcut will usually be placed in the Start menu and/or the desktop. You can customize the look of the Start menu by right-clicking the Start menu and selecting Properties from the menu.

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel is accessed from the Start menu, and it allows you to configure the settings for most of the key features in Windows (e.g. power, video, network, audio etc.). Windows XP provides basic controls for many of the features, however many new controls are added (or existing ones are enhanced) when you install the drivers. To see all controls it may be necessary to toggle off Category View.
The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse.

Once you have installed the Touchpad driver (see “Touchpad” on page D - 31) you can configure the functions by double-clicking the Touchpad driver icon on the taskbar. You may then configure the Touchpad tapping, buttons, scrolling, pointer motion and sensitivity options to your preferences. You will find further information at www.synaptics.com.

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.

Figure D - 3 - Mouse Properties
Function Keys & Visual Indicators

The function keys (F1 - F12 etc.) will act as hot keys when pressed while the Fn key is held down. In addition to the basic function key combinations; visual indicators (see the table below) are available when the hot key driver is installed (see “Module Drivers” on page D - 33).

<table>
<thead>
<tr>

Table D - 2 - Function Keys & Visual Indicators
Windows XP Information

Audio Features

You can configure the audio options on your computer from the Sounds and Audio Devices control panel, or from the Realtek HD Audio Manager icon in the taskbar/control panel (this will bring up the Realtek Audio Configuration menus). The volume may also be adjusted by means of the *Fn + F5/F6* key combination.

*Figure D - 4 - Realtek Audio Configuration Menus*

---

**Sound Volume Adjustment**

How high the sound volume can be set depends on the setting of the volume control within Windows (and the volume control function keys on the computer). Click the Volume icon on the taskbar to check the setting.
Video Features

You can switch display devices, and configure display options, from the Display Properties control panel in Windows as long as the appropriate Intel video driver is installed.

To access Display Properties in Windows:

1. Click Start, point to Settings and click Control Panel (or just click Control Panel).
2. Double-click Display (icon) - In the Appearances and Themes category.
3. Click Settings (tab) in the Display Properties dialog box.
4. Move the slider to the preferred setting in Screen resolution (Figure D - 5 on page D - 8).
5. Click the arrow, and scroll to the preferred setting in Color quality (Figure D - 5 on page D - 8).
6. Open the Display Properties control panel, and click Advanced (button) to bring up the Advanced properties tabs.
7. The Intel GMA control panel can be accessed by clicking the icon in the taskbar and selecting Graphics Properties from the menu (or from the Intel GMA Driver for Mobile Control Panel in the Windows control panel).

Dynamic Video Memory Technology

Intel® DVMT automatically and dynamically allocates as much (up to 256MB) system memory (RAM) as needed to the video system (the video driver must be installed). DVMT returns whatever memory is no longer needed to the operating system.
Display Properties

Taskbar Icon

The Intel GMA control panel can also be accessed by clicking the icon in the taskbar and selecting Graphics Properties from the menu.

If you cannot see the tray icon click the “Show Tray Icon” tickbox in the Intel(R) Graphics Media Accelerator for Mobile tab.

Figure D - 5 - Display Properties & Intel GMA Driver for Mobile Control Panel

D - 8 Video Features
Intel GMA Driver Controls

Access the Intel GMA control panel as indicated on page D - 7. You may make changes to the Display Devices, Display Settings, Color Correction, Hot Keys etc. by clicking the appropriate menu item.

**Help Menus**

Right-click on many of the items in the tabs to bring up the “What’s This?” button.

Click the “What’s This?” button to bring up the help menu.

**Operating Mode**

At least one other display must be attached in order to view Display Selection options.

*Figure D - 6 - Intel GMA Driver for Mobile*
Scheme Options

Use Scheme Options to configure quick settings for applications which require specific resolution and color settings in order to run properly e.g. games, multimedia programs. To set the scheme options:

1. Open the Display Settings control panel and click Advanced Settings (button).
2. Click the Intel(R)... tab and click Graphics Properties (button).
3. Configure your display configuration, resolution etc. as per your requirements from Display Settings.
4. Click on Scheme Options (button).
5. Type a name for the scheme then click Save.
6. Click the tickbox “Automatically launch an application when the scheme is applied” If you want to run a scheme when opening an application.
7. Click Browse to find the executable file for the application you want to set the scheme for (see sidebar), and click Open to select it.
8. Click Save (Save > OK) to save the settings (you can click in the “Restore the display settings after exiting this application” box to return to your original settings when you exit the program).
9. Click OK to exit the window.
10. Click the taskbar icon and Select Scheme to run it.

Application.exe

You will need to locate the actual application executable (.exe) file, not just the shortcut. To find the application right-click its shortcut on the desktop click Properties. Click the Shortcut (tab) and see where the executable file is located by clicking the Find Target (button). Note the location and you will then be able to browse to this file.
Display Devices & Options
Besides the built-in LCD you can also use an external monitor/flat panel display connected to the external monitor port as your display device. The following are the display options:

<table>
<thead>
<tr>
<th>Intel Display Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single Display</td>
<td>One of the connected displays is used as the display device</td>
</tr>
<tr>
<td>Multiple Display - Intel(R) Dual Display Clone</td>
<td>Both connected displays output the same view and may be configured independently</td>
</tr>
<tr>
<td>Multiple Display - Extended Desktop</td>
<td>Both connected displays are treated as separate devices, and act as a virtual desktop</td>
</tr>
</tbody>
</table>

*Figure D - 8 - Display Options*

**Function Key Combination**
You can use the **Fn + F7** key combination to toggle through the display options:
- Notebook Only
- External Display Only
- Notebook + External Display

Make sure you give the displays enough time to refresh.
Attaching Other Displays (Intel GMA)
1. Attach your external display to the external monitor port and turn it on.
2. Go to the Intel GMA control panel and click Display Devices.
3. Click to choose the display option from the Operating Mode menu.
4. Click to choose the display selection from the Display Selection menu.
5. Click Apply, and OK to confirm the settings change.

Function Key Combination
You can use the Fn + F7 key combination to toggle through the display options:
• Notebook Only
• External Display Only
• Notebook + External Display
Make sure you give the displays enough time to refresh.

Figure D - 9 - Display Devices
To Enable Intel(R) Dual Display Clone (Intel GMA)
1. Attach your external display to the external monitor port and turn it on.
2. Go to the Intel GMA control panel and click Display Devices.
3. Click to choose Intel(R) Dual Display Clone from the Operating Mode menu.
4. Choose which device is to be the Primary Device from the Display Selection menu.
5. Click Apply, and OK to confirm the settings change.
6. Click Display Settings to adjust the settings for the attached devices.

Figure D - 10 - Display Devices - Intel(R) Dual Display Clone
To Enable Extended Desktop (Intel GMA)
1. Attach your external display to the external monitor port and turn it on.
2. Go to the Intel GMA control panel and click Display Devices.
3. Click to choose Extended Desktop from the Operating Mode menu.
4. Choose which device is to be the Primary Device from the Display Selection menu.
5. Click Apply, and OK to confirm the settings change.
6. Click Display Settings to adjust the settings for the attached devices.

Figure D - 11 - Display Devices - Extended Desktop

Click the appropriate monitor icon and drag it to match the physical arrangement you wish to use (e.g. the secondary display may be extended left/right/above/below the primary display).

Click Display Settings to make any adjustments required.
To Enable Extended Desktop (Windows Display Properties)

1. Attach your external display to the external monitor port and turn it on.
2. Click Start, point to Settings (or click Control Panel) and click Control Panel (if you are in Category View choose Appearance and Themes).
3. Double-click Display (icon).
4. In the Display Properties dialog box, click Settings (tab).
5. Click the monitor icon (e.g. 2), and make sure you have checked “Extend my Windows desktop onto this monitor.” and click Apply.

Click the appropriate monitor icon (e.g. 2) to be able to select the option to extend the desktop on to it.

In this example the Primary monitor 1 is on the left, the secondary display 2 is on the right.

**Figure D - 12 - Display Properties (Extended Desktop)**

**Display Settings Extended Desktop**

Use the control panel to drag the monitors to match the physical arrangement you wish to use.

You can drag any icons or windows across to either display desktop, which makes it possible to have one program visible in one of the displays, and a different program visible in the other display.
Power Management Features

To conserve power, especially when using the battery, your computer uses the ACPI power management system. Power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system.

The Power Options control panel icon in Windows (see page D - 3) allows you to configure power management features for your computer. You may conserve power through individual components such as the monitor or hard disk, or you may use either Stand by or Hibernate mode to conserve power throughout the system.

Advanced Configuration and Power Interface

The ACPI interface provides the computer with enhanced power saving techniques and gives the operating system (OS) direct control over the power and thermal states of devices and processors. For example, it enables the OS to set devices into low-power states based on user settings and information from applications. ACPI is fully supported in Windows XP.
The Power Sources
The computer can be powered by either an AC/DC adapter or a battery pack.

AC/DC Adapter
Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. Attach the AC/DC adapter to the DC-in jack on the left of the computer.
2. Plug the AC power cord into an outlet, and then connect the AC power cord to the AC/DC adapter.
3. Raise the lid/LCD to a comfortable viewing angle.
4. Press the power button to turn “On”.

Battery
The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “How do I completely discharge the battery?” on page D - 27).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page D - 24.
Turning on the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options in the Windows control panel to configure this feature.

### Forced Off

If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for 4 seconds, or longer, to force the system to turn itself off.

### Power Button as Stand by or Hibernate Button

If you are using a fully ACPI-compliant OS, (such as Windows XP) you can use the OS’s “Power Options” control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS’s documentation, or “Configuring the Power Button” on page D - 23 for details).
Power Schemes

You can set your computer to conserve power through individual components by means of **Power Schemes**. You can also adjust the settings for each scheme to set the monitor to turn off after a specified time, and the computer's hard disk motor to turn off if the hard disk drive has not been accessed for a specified period of time (if the system reads or writes data, the hard disk motor will be turned back on). The schemes may also be set to set a specified time for the system to enter **Stand by** or **Hibernate** modes (see “System Power Options” on page D - 21).

**Resuming Operation**

Press a key on the keyboard, or move the mouse/TouchPad to resume from Monitor or Hard Disk Stand by.

![Power Schemes](image)
Windows XP Information

Each *Windows Power Scheme* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose the **Home/Office Desk** scheme for maximum performance when the computer is powered from an AC power source. Choose the **Max Battery** scheme (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered. *Windows* will use **Portable/Laptop** as the default scheme.
System Power Options

You can use the system power options to stop the computer’s operation and restart where you left off. This system features Stand by and Hibernate sleep mode levels (Hibernate mode will need to be enabled by clicking the option in the Hibernate tab in the Power Options control panel - see “Hibernate” on page D - 22).

Hibernate Mode vs. Shutdown

Hibernate mode and Shutdown are the same in that the system is off and you need to press the power button to turn it on. Their main difference is:

When you come back from hibernation, you can return to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

You can use either method depending on your needs.

Stand by Mode vs. Hibernate Mode

If you want to stay away from your work for just a while, you can put the system on Stand by instead of in hibernation. It takes a longer time to wake up the system from Hibernate mode than from Stand by mode.

Stand by/Hibernate or Shutdown Error

The computer may stop responding when you put it into (or resume from) Stand By or Hibernate, or when you shut down.

This error is caused by power management within Windows XP, when applied to a PC Camera attached to the internal USB hub.

Microsoft has posted a Hotfix for this error on its website (search for Hotfix KB909667). Download and install the Hotfix to correct this error.
**Stand by**

Stand by saves the least amount of power, but takes the shortest time to return to full operation. During Stand by the hard disk is turned off, and the CPU is made to idle at its slowest speed. All open applications are retained in memory. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter Stand by mode to save power.

**Hibernate**

Hibernate uses no power and saves all of your information on a part of the HDD before it turns the system off. Although it saves the most power it takes the longest time to return to full operation. You can set your computer to automatically enter Hibernate mode when the battery power is almost depleted. You will need to enable Hibernate mode from the Hibernate tab in the Power Options control panel. The system will resume from Hibernate mode by pressing the power button.

**System Resume**

The system can resume from Stand by mode by:

- Pressing the power button
- Pressing the Sleep/Resume key combination
- Network card (Wake On LAN) activity (if enabled)

*Figure D - 14*

Enable Hibernation
Configuring the Power Button

The power button may be set to send the computer into either Stand by or Hibernate mode. In Stand by mode, the LED \( \rightarrow/\text{\\(\bigwedge\text{ }} \) will blink green. In Hibernate mode the LED will be off (battery) or orange (AC/DC adapter). If you are in a power saving mode set to save power through individual components (e.g. hard disk, monitor), the LED will remain green.

You may also configure the Sleep/Resume key combination (\( \text{Fn} + \text{F4} \)) from the menu illustrated. In Windows this is referred to as the Sleep button.

Figure D - 15
Power Options (Advanced - Power Buttons)
Battery Information

Please follow these simple guidelines to get the best use out of your battery.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page D - 27 for instructions on how to do this).

Battery Life
Your computer’s battery life is dependent upon many factors, including the programs you are running, and peripheral devices attached. Power Options (you may set low battery Alarms and actions, and check the Power Meter from the Power Options control panel), and settings in the OS will help prolong the battery life if configured appropriately.
Battery life may be shortened through improper maintenance. **To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days.**

We recommend that you do not remove the battery yourself. If you need to remove the battery for any reason, see “Removing the Battery” on page 6 - 3.

**Recharging the Battery with the AC/DC Adapter**

The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. (Refer to “LED Indicators” on page 1 - 9 for information on the battery charge status, and to “Battery Information” on page D - 24 for more information on how to maintain and properly recharge the battery pack.)

---

**Conserving Battery Power**

- To conserve battery power:
  - Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
  - Close modem or communication applications when they are not being used.
  - Remove any unused PC Cards from the computer (PC Cards quickly use up battery power even if the system enters sleep mode).
  - Disconnect any unnecessary external devices.
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

Damaged Battery Warning

Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your service center. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer by yourself even when you see a message that indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own. Disable the **Power Options** functions in the **Control Panel**, especially any **Alarms** (unclick the tickboxes - see page **D - 24**) and **Schemes** (change all the settings to **Never** - see page **D - 19**). As the battery nears the end of its life save and close any critical files.

How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Windows XP Information

Driver Installation

Insert the Device Drivers & Utilities + User’s Manual disc, click Install Drivers/Option Drivers (button) and then click the appropriate driver name from the Drivers Installer menu. Follow the instructions to install the driver.

1. Check the driver installation order from Table D - 3 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.
2. Click to select the driver you wish to install, after installing each driver it will become greyed out (if you need to reinstall any driver, click the Unlock button).
3. Follow the instructions for each individual driver installation procedure as listed on the following pages.

Figure D - 17 - Drivers Installer Screen 1

Figure D - 18 - Drivers Installer Screen 2
Updating/Reinstalling Individual Drivers

If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the Control Panel in the Windows OS and double-click the Add/Remove Programs item. If you see the individual driver listed (if not see below), uninstall it, following the on screen prompts (it may be necessary to restart the computer). Go to the appropriate section of the manual to complete the update/reinstall procedure for the driver in question.

If the driver is not listed in the Add/Remove Programs item:

1. Click Start (menu), point to Settings and click Control Panel (or click Start > Control Panel).
2. Double-click System (icon); System (icon) is in Performance and Maintenance (category).
3. Click Hardware (tab) > Device Manager (button).
4. Double-click the device you wish to update/reinstall the driver for (you may need to click “+”).
5. Look for the Update Driver button (check the Driver tab) and follow the on screen prompts.

Table D - 3 - Driver Installation
Windows XP Information

Driver Installation Procedure
Insert the *Device Drivers & Utilities + User’s Manual* disc and click *Install Drivers* (button), or *Option Drivers* (button) to access the optional driver menu.

**Chipset**
1. Click **1.Install Chipset Driver > Yes.**
2. Click **Next > Yes > Next > Next.**
3. Click **Finish** to restart the computer.

**Video**
1. Click **2.Install Video Driver > Yes.**
2. Click **Next > Yes > Next > Next.**
3. Click **Finish** to restart the computer.

**LAN**
1. Click **3.Install LAN Driver > Yes.**
2. Click **Next > Install.**
3. Click **Finish.**
4. The network settings can now be configured.

**CardReader**
1. Click **4.Install Card Reader Driver > Yes.**
2. Click **Install > Finish.**

Windows XP Service Pack 3
Make sure you install *Windows XP Service Pack 3* (or a Windows XP version which includes Service Pack 3) before installing any drivers.

Driver Installation General Guidelines
The driver installation procedures outlined in this Chapter are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. **Next > Next > Finish**) unless you are an advanced user. In many cases a restart is required to install the driver.
**Touchpad**
1. Click 5.Install Touchpad Driver > Yes.
2. Click Next > Next > Next.
3. Click Finish to restart the computer.

**Trusted Platform Module (TPM)**
Before installing the Trusted Platform Module driver you should enable the TPM State in the BIOS (see “Security Menu” on page 5 - 11 and see “Trusted Platform Module” on page D - 41 for full details.

1. Click 6.Install TPM Driver > Yes.
2. Click Install > Next.
3. Click the button to accept the license and click Next.
4. Click Next > Next > Install.
5. Click Finish > Yes to restart the computer.

**Hot Key Utility**
1. Click 7.Install Hotkey Utility > Yes.
2. Click Next > Install.
3. Click Finish > Finish to restart the computer.

**PC Camera (Optional)**
Before installing the PC Camera driver, make sure that the optional PC Camera is on. Use the Fn + F10 key combination to power the camera on.

1. Click 8.Webcam > Yes.
2. Choose the language you prefer and click Next > Next.
3. Click Finish to restart the computer.
4. See “PC Camera Module” on page D - 53 for details.
Wireless LAN Module (Optional)
If you have included an Intel® Wi-Fi Link 5100/5300 Series (802.11 a/g/n) or 802.11b/g WLAN module in your purchase option, use the Fn + F11 key combination to toggle power to the module. Your installation procedure will be dependent upon which WLAN module is included in your purchase option. See “WLAN Module” on page D - 59 for details.

Intel Wireless LAN Module
1. Click Wireless Lan > Yes (if SP3 is installed go straight to step 9).
2. Click Next > Next to link to the required prerequisites on the Internet.
3. Click Download (button) to download the Windows Installer executable (.exe) file to the computer’s hard disk.
4. Double-click (or click the Run button) to install the Windows Installer file and follow the on-screen instructions for file installation.
5. You will be required to restart the computer to complete the file installation.
6. Repeat steps 1 to 4 to get to the appropriate download location.
7. Click Download (button) to download the Microsoft MSXML file to the computer’s hard disk (if you are unsure of which file to download for you processor you can click Run instead of acknowledging the file, and you will be informed if the file is appropriate or not).
8. Follow the on-screen instructions for file installation.
9. After the files have been installed click Next > Next.
10. Click the button to accept the license and click Next > Next > Next.
11. Click Finish to complete the installation.

802.11b/g WLAN Driver Installation
1. Click Wireless Lan > Yes.
2. Choose the language you prefer and click Next.
3. Click Next > Install.
4. Click Finish to complete the installation.
Audio
1. Click **Install Audio Driver > Yes**.
2. Click **Next**.
3. Click **Finish** to restart the computer.

Note that after installing the audio driver the system will not return to the **Drivers Installer** screen. To install any of the optional drivers listed overleaf, eject the **Device Drivers & Utilities + User’s Manual** disc and then reinsert it (or double-click the disc icon in My Computer), and click **Option Drivers** (button) to access the optional driver menu.

Module Drivers
See the following pages for the driver installation procedures for any of the optional modules included in your purchase configuration.

![Figure D - 19 - Drivers Installer Screen 2](image)
Windows XP Information

Bluetooth Module
Note: The operating system is the default setting for Bluetooth control in Windows XP, and does not require a driver. See “Bluetooth Module” on page D - 35 for configuration instructions.

Fingerprint Reader Module
See “Fingerprint Reader Driver Installation” on page D - 47.

3.75G Module
See “3.75G/HSPA Module” on page D - 62.

Wireless LAN, Bluetooth & 3.75G Modules

Wireless Device Operation Aboard Aircraft
The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Wireless LAN, Bluetooth & 3.75G Modules Power Toggle
Enable power to the modules as follows:
Fn + F11 = Wireless LAN Module Power Toggle
Fn + F12 = Bluetooth Module Power Toggle
Fn + _ = 3.75G Module Power Toggle
The LED indicator will be green if the WLAN module is on, and orange if the Bluetooth module is on.
Bluetooth Module

The operating system’s Bluetooth Devices control panel is used to configure the Bluetooth settings in Windows XP, and therefore does not require a driver. Use the **Fn + F12** key combination (see “Function Keys & Visual Indicators” on page D - 5).

---

**Bluetooth Data Transfer**

Note that transferring data between the computer and a Bluetooth enabled device is supported in **one direction only** (simultaneous data transfer is not supported).

Therefore if you are copying a file from your computer to a Bluetooth enabled device, you will not be able to copy a file from the Bluetooth enabled device to your computer until the file transfer process from the computer has been completed.
If you want to display the Local Area Connection icon for the Bluetooth connection in the taskbar, set it up as follows:

1. Access the Network Connections control panel in Windows (Start > Settings > Network Connections OR Start > Connect To > Show all Connections) or by clicking the taskbar icon.
2. Right-click the Bluetooth connection icon, and select Properties.
3. Click to put a tick (if none is present) in the “Show icon in the notification area when connected” box and click OK.
4. Close the control panels and the icon for the Bluetooth local area connection will be displayed in the taskbar when connected (see sidebar and overleaf).

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the Fn + F12 key combination to toggle power to the Bluetooth module, and check the LED indicator to see if the module is powered on or not (see Table D - 2, on page D - 5/Table, on page 1 - 9).

Figure D - 20
Local Area Connection
Bluetooth Configuration in Windows XP

Setup your Bluetooth Device so the Computer Can Find it
1. Turn your Bluetooth device (e.g. PDA, mobile phone etc.) on.
2. Make the device discoverable (to do this check your device documentation).

To Turn the Bluetooth Module On
1. Press the **Fn + F12** key combination to power on the Bluetooth module.
2. A Bluetooth icon will appear in the taskbar (see sidebar).
3. You can then do any of the following to access the Bluetooth Devices control panel.
   - **Double-click** the icon to access the Bluetooth Devices control panel.
   - **Click** Start, and click Control Panel (or point to Settings and click Control Panel), and then click Bluetooth Devices (Network and Internet Connections).
   - **Click/Right-click** the icon and choose an option from the menu.

![Bluetooth Taskbar Icon](image)

If you cannot see the Bluetooth icon in the taskbar, access the Bluetooth Devices control panel. Click Options (tab), and make sure that Show Bluetooth icon in the notification area check box has a tick inside it.

Note that you will need to check the LED indicator to see if the module is powered on or not.

![Figure D - 21 Bluetooth Devices & Click Icon Menu](image)
To Add a Bluetooth Device

1. Access the Bluetooth Devices control panel.
2. Click Options (tab), and make sure that **Allow Bluetooth devices to connect to this computer** check box (Connections) has a tick inside it.
3. Click Devices (tab), and then click Add.
5. Click to select "My device is set up and ready to be found", and then click Next.
6. The Wizard will then search for any available Bluetooth devices within range.
7. Click to select the device you want to communicate with, and click Next.
8. Select an appropriate passkey option and click Next.
9. Click Finish.
To Change Settings for the Bluetooth Device
1. Access the Bluetooth Devices control panel.
2. Click on the device you want to change and click Properties to:
   - Change the name of the device (click General, type a new name and click OK).
   - Enable/Disable a service (click Services, clear/tick the check box next to the service and click OK).

To Make your Computer Discoverable to Bluetooth Devices
1. Access the Bluetooth Devices control panel.
2. Click Options, and make sure that Turn discovery on check box (Discovery) has a tick inside it.
3. Make sure that Alert me when a new Bluetooth device wants to connect check box (Connections) has a tick inside it, if you want to be notified when a Bluetooth device wants to connect.
Security Modules (TPM & Fingerprint)

The encrypted channel between the Trusted Platform Module security chip and the optional fingerprint reader with Protector Suite Software provides a high level of security for your computer. A further level of security and control is provided in the BIOS (see “Security Menu” on page 5-11 and “TPM State” on page 5-14). Make sure you install the TPM (see “Trusted Platform Module (TPM)” on page D-31) and fingerprint reader (see “Fingerprint Reader Module” on page D-34) drivers.

The fingerprint reader and Protector Suite Software allow you to:

- Access or Lock your computer
- Protect sensitive files
- Display and file your favorite web pages
- Fill in frequently used dialogs
- Run your favorite applications

The TPM security chip allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Individual users can use the TPM as an authentication with the fingerprint reader.

Password Warning
If you set passwords for any of the security modules, NEVER forget your password. The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.

Password Warning

Password Warning

Password Warning

Password Warning

Password Warning

Password Warning

Password Warning
Trusted Platform Module

Before setting up the TPM functions you must initialize the security platform.

**Enabling & Activating TPM**

1. Restart the computer.
2. Enter the **PhoenixBIOS Setup Utility** by pressing F2 during the POST.
3. Use the arrow keys to select the **Security** menu.
4. Select **TPM Support** and set the item to **Enabled**.
5. The **TPM State** menu will then appear.

![Figure D - 25 TPM Support](image)
6. Use the arrow keys to select the **TPM State** menu.
7. Select **TPM State**, and set the item to **Enable & Activate**.

8. Press **F10** to save the changed BIOS information, exit the BIOS and restart the computer.

9. If you make any changes to the TPM State you will be asked to **Execute/Reject** the change after restart (“Physical Presence Operations” on page D - 15).

10. You can now install the **TPM driver** (see “Trusted Platform Module (TPM)” on page D - 31).
Initializing TPM

1. To initialize the TPM it may be necessary to first clear any existing TPM information if applicable.
2. Enter the PhoenixBIOS Setup Utility by pressing F2 during the POST.
3. Use the arrow keys to select the TPM State menu.
4. Select TPM State, and set the item to **Clear**.
5. Press **F10** to save the changed BIOS information, exit the BIOS and restart the computer.
6. If you make any changes to the TPM State you will be asked to **Execute/Reject** the change after restart (**Physical Presence Operations** on page 5 - 13).
7. Run the application from the Infineon Security Platform Solution > Manage Security Platform item in the Start > Programs/All Programs menu.
8. Click User Settings (tab) and click Yes (or click the Security Platform State taskbar bubble).
9. The Quick Initialization method will automatically be selected for you (if you need to use advanced settings provided by your network administrator then select Advanced Initialization)
10. You will need to use a removable media (e.g. a USB Flash Drive) to store passwords and data (keep the media in a safe place until required).
11. Select the drive you want to use from the drop-down menu and click Next.
12. Click **Next**.
13. Choose the **Security Platform Features** you want to use by clicking the appropriate tickbox.
14. Enter a **Basic User Password** (and re-type to confirm it) and click **Next**.
15. Click **Next** to confirm the settings.
16. The computer will then initialize the settings.
17. Click **Finish**.
18. Click the tabs and control panels to adjust the settings.
19. Double-click the taskbar icon to access the **Infineon Security Platform Settings Tool**, or right-click the taskbar icon and select a menu item.
Windows XP Information

Infineon Security Platform Settings Tool
The Infineon Security Platform Settings Tool allows you to manage and check the TPM state, manage your password information, and to backup and restore the TPM data. As TPM is usually administered within large enterprises and organizations, your system administrator will need to assist you in managing the information here.

Help
Right-click the taskbar icon to bring up the menu to select Help or How to use the Security Platform Features.

Figure D - 30
Infineon Security Platform Settings Tool

D - 46 Trusted Platform Module
Fingerprint Reader Module

If you have included the fingerprint reader in your purchase option you will need to install the driver as per the instructions below.

Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection.

Before beginning the enrollment process it is recommended that you go through the fingerprint tutorial. To run the tutorial click Start > Programs/All Programs > Protector Suite QL > Fingerprint Tutorial after installing the driver.

Fingerprint Reader Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 1.FingerPrint > Yes.
4. Click Software Installation.
5. Click Next > Next > Next.
6. Click Finish > Yes to restart the computer.
Windows XP Information

User Enrollment
1. Click Start > Programs/All Programs > Protector Suite QL > User Enrollment, or double click the taskbar icon (click Start fingerprint enrollment).
2. On the first run of the program you will be asked to click the button to accept the license, and then click OK.
3. Click Next (the enrollment method will automatically be configured), and then click Finish.
4. You will then be prompted to enter your Windows password (or you will need to set a Windows password if you have not configured one) and click Next.
5. Select either to use the fingerprint reader alone for authentication, or choose both the fingerprint reader and the Windows password, and then click Next.
6. Click Next > Next (if you have the “Run interactive tutorial” tickbox selected you will run through the Fingerprint Tutorial).
7. Click Next for each window of the tutorial (you can click the button to “skip tutorial” at any time).
8. Click the button above any of the fingers to begin the enrollment process for that finger.
9. Swipe the finger five times to enroll that finger.

Figure D - 31 - Fingerprint Enrollment

Note that it is strongly recommended that you enroll more than one finger in case of injury etc.
10. Repeat the process for all the fingers you wish to enroll (see sidebar), and then click Next > Finish.
11. Click “Help” in the Fingerprint Control Center to get more information on any topic.
12. You can also run the Tutorial, or Introduction (to run the product tour video) to get more information.
13. Right-click the taskbar icon to bring up the Control Center that allows you to Edit Fingerprints, register applications, manage Password Bank, File Safe and access the Help menu etc. You can also run the Control Center etc. from the Protector Suite QL item in the Programs/All Programs menu.

![Figure D - 32 - Control Center & Biomenu](image)

15. If you swipe your finger over the reader at any time you can access the Biomenu to lock the computer, register websites, access the Personal Safe open the Control Center and access the Help menu.
Protector Suite TPM Initialization
1. Click Start > Programs/All Programs > Protector Suite > Control Center, or double click the taskbar icon.
2. Click System Settings and click TPM (Tab).
3. Click Initialize TPM.
4. Click Next > Finish.
5. Click OK to close the System Settings control panel.

Figure D - 33
Protector Suite TPM Initialization & Multifactor
6. Click **Enroll or Edit Fingerprints** and then click **Next**.
7. Enter the password or swipe a finger and click **Next**.
8. Select the **Authentication Factors** in **Multifactor** to configure fingerprint authentication along with TPM.
9. Enter a password and retype it to confirm it and then click **Next**.
10. Click **Next > Next > Finish**.

![Multifactor](image)

**Figure D - 34**
Protector Suite TPM Initialization & Multifactor
**Fingerprint Control Center Features**

**Application Launcher**
The **Application Launcher** allows you to register applications to be launched when assigned to a particular finger. Simply copy the application icon on to one of the registered fingers and ten click OK to close the application window. Once registered the application will launch when you swipe the appropriate finger across the sensor.

**Password Bank**
The **Password Bank** stores registrations of user names, passwords and other settings for web sites etc.

**File Safe**
The **File Safe** is an encrypted area assigned on your hard drive that allows you to store files and folders to be protected by fingerprint protection.

For more information on these and other features simply access “Help” in the **Fingerprint Control Center** and select the item from the menu on the left.
PC Camera Module

Before installing the optional PC Camera module driver use the \texttt{Fn + F10} key combination (see “Function Keys & Visual Indicators” on page D - 5) to toggle power to the PC Camera module. The PC Camera module uses the BisonCap application to capture video files.

Make sure you install the PC Camera driver (see “PC Camera (Optional)” on page D - 31). Run the BisonCap application program from the BisonCam shortcut on the desktop, or from the BisonCam item in the Start > Programs/All Programs menu (if the hardware is turned off use the \texttt{Fn + F10} key combination to turn it on again).

Taking Still Pictures

Double-click the My Computer icon on the desktop, or go the Start menu and point to My Computer, then click it. Double-click the camera icon. Click Take a new picture in the Camera Tasks box.
If you wish to capture video & audio with your camera, it is necessary to setup the audio recording options in Windows.

1. Go to the Start menu and point to Settings (or just click Control Panel) and click Control Panel, then double-click the Sounds & Audio Devices icon (Sounds, Speech, and Audio Devices in Category View).
2. Click Advanced in the Volume > Device volume tab.
3. Click Options and scroll down and click Properties.
4. Select Realtek HD Audio Input from the Mixer device menu.
5. Make sure the Mic Volume (check box) is checked, then click OK.
6. Boost the volume in the (Mic Volume) section (in the Recording Control menu) as high as it will go.
7. Close the Recording Control window, and then click OK.
8. Run the BisonCap application program from the Start > Programs/All Programs > BisonCam menu.
9. Go to the Devices menu heading and select Realtek HD Audio Input (it should have a tick alongside it).
10. Go to the Capture menu heading and select Capture Audio (it should have a tick alongside it).
BisonCap

BisonCap is a video viewer for general purpose video viewing and testing, and for capturing video files to .avi format.

1. Run the BisonCap application from the Start > Programs/All Programs > Bison-Cam menu (it is recommended that you set the capture file before the capture process - see Set Capture File below).
2. Go to the Capture menu heading (if you wish to capture audio check “PC Camera Audio Setup” on page D - 53) and select Start Capture.
3. Click OK (the file location will be displayed in the pop-up box) to start capturing the video, and press Esc to stop the capture (you can view the file using the Windows Media Player).

Set Capture File

Prior to capturing video files you may select the Set Capture File... option in the File menu, and set the file name and location before capture (this will help avoid accidentally overwriting files). Set the name and location then click Open, then set the “Capture file size:” and click OK. You can then start the capture process as above.

Note the important information in “Reducing Video File Size” on page D - 56 in order to save file space, and help prevent system problems.
Reducing Video File Size

Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to My Computer, right-click the hard disk, and select Properties) If necessary you can remove the recorded video file to a removable medium e.g. CD, DVD or USB Flash drive.

Note that the Windows XP system requires a minimum of 1.5GB of free space on the C: drive system partition. In order to prevent system problems it is recommended that you save the captured video file to a location other than the C: drive (see “Set Capture File” on page D - 55), limit the file size of the captured video (see “Pre-Allocating File Space” on page D - 55) or reduce video resolution (see below).

To Reduce Video Resolution Output Size:

1. Run the BisonCap program.
2. Go to Options and scroll down to select Video Capture Pin....
3. Click the Output Size drop box and select a lower resolution size in order to reduce the captured file size.
Eliminating Screen Flicker
If you find that the video screen in the BisonCap program is flickering, you can try to adjust the setting in the Video Capture Filter options.

1. Run the BisonCap program.
2. Go to Options and scroll down to select Video Capture Filter....
3. Click either 50Hz or 60Hz under Frequency in Property Page (tab).

Figure D - 35
Video Capture Filter
Windows XP Information

Zoom
The **BisonCap** program allows you to zoom the camera in and out.

1. Run the **BisonCap** program.
2. Go to **Zoom** and select **Zoom Out/Zoom In**.

Taking Still Pictures
The **BisonCap** program allows you to take still pictures.

1. Run the **BisonCap** program.
2. Go to **Options/Capture** and select **Take Picture/Snapshot**.
3. The picture (in JPEG format) will be placed in the **Snapshot** folder on the desktop.

Figure D - 36
*Zoom/Setting*

**Snapshot Folder**
The **Snapshot** folder's default location is on the desktop. Do not move this folder or an error may appear when you try to take a still picture.

If you accidentally delete or move the folder, you can create a new **Snapshot** folder on the desktop in order to capture the files.
WLAN Module

If you have included an Intel® Wi-Fi Link 5100/5300 Series (802.11 a/g/n) or 802.11b/g WLAN module in your purchase option, use the **Fn + F11** key combination to toggle power to the module. Your installation procedure will be dependent upon which WLAN module is included in your purchase option.

**Download Prerequisite Files (Intel WLAN modules if Service Pack 3 is not installed)**

Make sure you install Windows XP Service Pack 3 (or a Windows XP version which includes Service Pack 3) before installing the Intel WLAN driver. If you DO NOT have Service Pack 3 installed then make sure you have a working internet connection before beginning the driver installation process for Windows XP.

You will be pointed to download the required Windows Installer 3.1 and Microsoft MSXML 6.0 files, as part of the installation procedure overleaf. This information applies to Intel WLAN modules only.

Make sure you install the appropriate Wireless LAN driver (see “Intel Wireless LAN Module” on page D - 32 or “802.11b/g WLAN Driver Installation” on page D - 32).
Windows XP Information

Intel WLAN Configuration
1. Configure the settings by going to the Intel PROSet Wireless WiFi Connection Utility (Start > Programs/All Programs > Intel PROSet Wireless WiFi Connection Utility), or by double-clicking the taskbar icon.
2. Click to select any available network, and click Connect to establish a connection.
3. If you do not see your Wireless Access Point click Refresh (button).
4. Click Help (link) to bring up the Help Menu.
5. Make sure that the WiFi On button is selected.

Figure D - 37 - Intel PROSet Wireless WiFi Connection Utility
802.11b/g WLAN Configuration

1. The operating system is the default setting for Wireless LAN control in Windows XP.
2. Access any available wireless networks from Network Connections > Wireless Network Connection menu in Windows, or click the icon in the taskbar, and click View Wireless Connections.

Use the Windows Network Connections control panel to access available wireless networks (Start > Settings > Network Connections or Start > Connect To > Show all Connections).

3.75G/HSPA Module

If you have included an optional 3.75G/HSPA module in your purchase option follow the instructions on page 7-46 to install the USIM card (which will be provided by your service provider), and then install the application.

Before installing the application, make sure that the 3.75G/HSPA module is on. Use the **Fn + key combination** (see “Function Keys & Visual Indicators” on page D-5) to toggle power to the 3.75G/HSPA module.

---

**Important Notice - 3.75G/HSPA & Bluetooth/Wireless LAN Modules**

In order to comply with FCC regulations you should NOT operate the 3.75G/HSPA module and the Bluetooth/Wireless LAN modules at the same time as this may disrupt radio frequency, and cause interference. When the 3.75G/HSPA module is powered on, make sure that the Bluetooth/Wireless LAN modules are powered off.

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the **Fn + key combination** to toggle power to the HSPA modem module, and check the indicator to see if the module is powered on or not (see Table D - 2, on page D - 5 Table , on page 1 - 9).
Before installing the application, make sure that the 3.75G/HSPA module is ON (installing the driver with the module off will not allow the software to detect the module hardware correctly). Use the **Fn + ** key combination (see “Function Keys & Visual Indicators” on page D - 5) to toggle power to the 3.75G/HSPA module. When the 3.75G/HSPA module is powered on, the indicator will briefly be displayed. Make sure you install the drivers in the order indicated in Table D - 3, on page D - 29. Note that exiting the application does NOT turn off the 3.75G/HSPA module.

- **3G Watcher** - See “3G Watcher Application Installation” on page D - 64 for driver installation information and “Setting Up a Carrier Profile” on page 7 - 49 for instructions on using the 3G Watcher application.

- **HSPA Modem Interface** - See “HSPA Modem Interface Installation” on page D - 65 for driver installation information and “HSPA Modem Interface” on page 7 - 56 for instructions on using the HSPA Modem Interface.

- **Mobile Partner** - See “Mobile Partner Application Installation” on page D - 66 for driver installation information and “Mobile Partner Application” on page 7 - 65 for instructions on using the Mobile Partner application.
3G Watcher Application Installation

1. Enable power to the module by pressing the **Fn +** key combination (the on screen icon ![module power status](image) will indicate the module’s power status).
2. If a *Found New Hardware* window appears, click *Cancel*.
3. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
4. Click *Option Drivers* (button).
5. Click *2.3.5G Generation Module > Yes*, and then click *Next*.
6. Click the button to accept the license agreement, and then click *Install*.
7. When the next screen appears wait (for about 2 minutes) until you see the message bubble “*Found New Hardware*” in the taskbar disappear before clicking *Finish* (this allows the hardware to detect the 3.75G module).
8. Access the *3G Watcher* application from the *Start* menu (*Start > Programs/All Programs > Sierra Wireless > 3G Watcher*), or by double-clicking the desktop icon ![desktop icon](image).
HSPA Modem Interface Installation

1. Enable power to the module by pressing the **Fn + 3** key combination (the on screen icon will indicate the module’s power status).
2. If a *Found New Hardware* window appears, click *Cancel*.
3. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
4. Click *Option Drivers* (button).
5. Click *2.3.5G Generation Module > Yes*, and then click *Next*.
6. Click *Next > Install > Finish*.
7. Access the **HSPA modem** interface from the *Start* menu (*Start > Programs/All Programs > HSPA modem*), or by double-clicking the **HSPA modem** icon on the desktop.
Mobile Partner Application Installation

1. Enable power to the module by pressing the **Fn + ��** key combination (the on screen icon  will indicate the module’s power status).
2. If a *Found New Hardware* window appears, click *Cancel*.
3. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
4. Click *Option Drivers* (button).
5. Click *2.3.5G Generation Module > Yes*.
6. Choose the language you prefer and click *OK*.
7. Click *I Agree* (button) to accept the license agreement.
8. Click *Next > Install*.
9. Click *Finish* to restart the computer.
10. Access the *Mobile Partner* application from the *Start* menu (**Start > Programs/All Programs > Mobile Partner**), or by double-clicking the *Mobile Partner* icon on the desktop.
11. See “*Mobile Partner Application” on page 7 - 35* for instructions on using the *Mobile Partner* application.
