Preface

R&TTE Directive
This device is in compliance with the essential requirements and other relevant provisions of the R&TTE Directive 1999/5/EC.

This device will be sold in the following EEA countries: Austria, Italy, Belgium, Liechtenstein, Denmark, Luxembourg, Finland, Netherlands, France, Norway, Germany, Portugal, Greece, Spain, Iceland, Sweden, Ireland, United Kingdom, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Slovakia, Poland, Slovenia.

EuP-Standby and Off Mode Power Consumption Statement:
The figures below note the power consumption of this computer in compliance with European Commission (EC) regulations on power consumption in off mode or standby mode:

- Standby Mode < 2W
- Off Mode < 1W
CE Marking

This device has been tested to and conforms to the regulatory requirements of the European Union and has attained CE Marking. The CE Mark is a conformity marking consisting of the letters “CE”. The CE Mark applies to products regulated by certain European health, safety and environmental protection legislation. The CE Mark is obligatory for products it applies to: the manufacturer affixes the marking in order to be allowed to sell his product in the European market.

This product conforms to the essential requirements of the R&TTE directive 1999/5/EC in order to attain CE Marking. A notified body has determined that this device has properly demonstrated that the requirements of the directive have been met and has issued a favorable certificate of expert opinion. As such the device will bear the notified body number 0560 after the CE mark.

The CE Marking is not a quality mark. Foremost, it refers to the safety rather than to the quality of a product. Secondly, CE Marking is mandatory for the product it applies to, whereas most quality markings are voluntary.
Preface

FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re orient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the service representative or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

Warning

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit:
   - **Model B** - Full Range AC/DC Adapter - AC Input 100 - 240V, 50 - 60Hz, DC Output 19V, 6.3A (120W) minimum.

This Computer's Optical Device is a Laser Class 1 Product
Instructions for Care and Operation

The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don’t drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

   ![Images of a computer on unstable surfaces or with heavy objects on top of it]
   Do not place it on an unstable surface.
   Do not place anything heavy on the computer.

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

   ![Images of a computer near heat sources or in direct sunlight]
   Do not expose it to excessive heat or direct sunlight.
   Do not leave it in a place where foreign matter or moisture may affect the system.
   Don’t use or store the computer in a humid environment.
   Do not place the computer on any surface that will block the Vents/Fan Intakes.
3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

   - Do not turn off the power until you properly shut down all programs.
   - Do not turn off any peripheral devices when the computer is on.
   - Do not disassemble the computer by yourself.
   - Perform routine maintenance on your computer.

5. **Take care when using peripheral devices.**

   - Use only approved brands of peripherals.
   - Unplug the power cord before attaching peripheral devices.
Power Safety
The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

| Do not plug in the power cord if you are wet. | Do not use the power cord if it is broken. | Do not place heavy objects on the power cord. |

Power Safety Warning
Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.
Preface

Polymer Battery Precautions

Note the following information which is specific to polymer batteries only, and where applicable, this overrides the general battery precaution information overleaf.

- Polymer batteries may experience a slight expansion or swelling, however this is part of the battery’s safety mechanism and is not a cause for concern.
- Use proper handling procedures when using polymer batteries. Do not use polymer batteries in high ambient temperature environments, and do not store unused batteries for extended periods.

See also the general battery precautionary information overleaf for further information.
General Battery Precautions

• Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
• Do not remove any batteries from the computer while it is powered on.
• Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
• If you do not use the battery for an extended period, then remove the battery from the computer for storage.
• Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
• Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
• Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
• Keep the battery away from metal appliances.
• Affix tape to the battery contacts before disposing of the battery.
• Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Preface

Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Servicing
Do not attempt to service the computer yourself. Doing so may violate your warranty and expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

• When the power cord or AC/DC adapter is damaged or frayed.
• If the computer has been exposed to rain or other liquids.
• If the computer does not work normally when you follow the operating instructions.
• If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
• If there is an unusual odor, heat or smoke coming from your computer.

Removal Warning
When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before restoring power to the system.
Also note the following when the cover is removed:
• Hazardous moving parts.
• Keep away from moving fan blades.
Travel Considerations

Packing
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it’s latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vents/Fan Intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intakes while the computer is in use.
On the Road
In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

Hand-carry the notebook - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

Beware of Electromagnetic fields - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data. Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). Note: Some airports also scan luggage with these devices.

Fly safely - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

Get power where you can - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

Keep it dry - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

Remember to:
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Preface

Lighting
Proper lighting and a comfortable viewing angle can reduce eye strain and shoulder and neck muscle fatigue.

• Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
• Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
• Position the display directly in front of you at a comfortable viewing distance.
• Adjust the display-viewing angle to find the best position.

LCD Screen Care
To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

• Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
• Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
• Rotate desktop background images every few days.
• Turn the monitor off when the system is not in use.

LCD Electro-Plated Logos
Note that in computers featuring a raised LCD electro-plated logo, the logo is covered by a protective adhesive. Due to general wear and tear, this adhesive may deteriorate over time and the exposed logo may develop sharp edges. Be careful when handling the computer in this case, and avoid touching the raised LCD electro-plated logo. Avoid placing any other items in the carrying bag which may rub against the top of the computer during transport. If any such wear and tear develops contact your service center.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- **Chapter 2** A guide to using some of the main features of the computer e.g. the storage devices (hard disk, optical device, card reader), TouchPad & Mouse & Audio Features.
- **Chapter 3** The computer’s power management options.
- **Chapter 4** The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
- **Chapter 5** An outline of the computer’s built-in software or BIOS (Basic Input Output System).
- **Chapter 6** Instructions for upgrading your computer.
- **Chapter 7** A quick guide to the computer’s PC Camera, Wireless LAN, Wireless Display, Fingerprint, Bluetooth & WLAN Combo and TruStudio Audio modules (some of which may be optional depending on your purchase configuration).
- **Chapter 8** A troubleshooting guide.
- **Appendix A** Definitions of the interface, ports/jacks which allow your computer to communicate with external devices.
- **Appendix B** Information on the Control Center.
- **Appendix C** Information on the NVIDIA Video driver controls.
- **Appendix D** The computer’s specification.
Quick Start Guide

Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “Drivers & Utilities” on page 4 - 1, “BIOS Utilities” on page 5 - 1 and “Upgrading The Computer” on page 6 - 1 in the User’s Manual. You may also find the notes marked with a ♾ of interest to you.

Beginners and Not-So-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in this Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a ♾ as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the ☢ symbol. Also please note the safety and handling instructions as indicated in the Preface.

1 - 2 Overview
Not Included
Operating Systems (e.g. Windows 7) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the appropriate drivers. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed in Table 4 - 1, on page 4 - 3. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you), refer to “Drivers & Utilities” on page 4 - 1 for installation instructions.

Ports and Jacks
See “Ports and Jacks” on page A - 2 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
System Software

Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find that this manual refers to the *Windows 7* operating system.

---

Windows OS

In order to run *Windows 7* without limitations or decreased performance, your computer requires a minimum 1GB of system memory (RAM), however if you are running *Windows 7 64 bit* your computer requires a minimum 2GB of system memory (RAM).
Model Differences

This notebook series includes two different model types that mainly differ as indicated in the table below. Note that your model may appear slightly different from those pictured in this manual.

</tbody>
</table>

Table 1 - 1 - Model Differences
Quick Start Guide

System Startup

1. Remove all packing materials and place the computer on a stable surface.
2. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
3. Attach the AC/DC adapter to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
4. Use one hand to raise the lid/LCD to a comfortable viewing angle (do not exceed 135 degrees); use the other hand (as illustrated in Figure 1 - 1 below) to support the base of the computer (Note: Never lift the computer by the lid/LCD).
5. Press the power button on the top right of the computer for about 2 - 3 seconds to turn the computer “on” (note that the power LED on the front of the computer will turn from orange to green when the computer powers on).

Shutdown

Note that you should always shut your computer down by choosing the Shut Down command from the bottom right of the Start menu in Windows. This will help prevent hard disk or system problems.

Figure 1 - 1 - Opening the Lid/LCD & Computer with AC/DC Adapter Plugged-In
System Map: LCD Panel Open - Model A

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the key combinations to toggle power to the 3.75G/HSPA/WLAN/Bluetooth modules, and check the LED indicator or on-screen icon to see if the modules are powered on or not (see Table 1 - 5, on page 1 - 13 / Table 1 - 3, on page 1 - 10).

Note that the Touchpad and Buttons valid operational area is that indicated within the red dotted lines above.

*Table 1 - 4 - Hot Key Buttons*

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot-keys unique to the system’s regular keyboard may not work.

NumLk & ScrLk

Hold down the Fn Key and either NumLk or ScrLk to enable number or scroll lock, and check the LED indicator for status.
Keyboard

The keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See *Table 1 - 5, on page 1 - 13* for full function key combination details.

*Figure 1 - 4 - Keyboard*
**Function Keys & Visual Indicators**

The function keys (F1 - F12 etc.) will act as hot keys when pressed while the Fn key is held down. Visual indicators (see the table below) are available when the Hot Key driver is installed.

<table>

See also *Table 1 - 2, on page 1 - 9* for Number Lock, Caps Lock and Scroll Lock indicators

*Table 1 - 5 - Function Keys & Visual Indicators*
Control Center

Press the **Fn + Esc** key combination, or double-click the icon in the notification area of the taskbar to toggle the Control Center on/off. The Control Center gives quick access to frequently used controls and enables you to quickly turn modules on/off.

**Table 1 - 6 - Control Center**

- **Control Center**
  - Click on any button to turn any of the modules (e.g. TouchPad, Camera) on/off.
  - Click on the power conservation modes to switch between **Performance**, **Balanced** or **Energy Star** modes (see page 3 - 10). To remove the Power Conservation Modes screen just click in a blank area of the icon or press a key on the keyboard.
  - Click on the buttons (or just click and hold the mouse button) to adjust the slider for **Brightness/Volume**.
  - Click on Display Switch and click to choose a display mode from the menu (see page C - 13).
1. LED Indicators
2. DC-In Jack
3. Vent/Fan Intake
4. External Monitor Port
5. RJ-45 LAN Jack
6. 2 * USB 3.0 Ports
7. Multi-In-1 Card Reader
8. HDMI-Out Port
9. Combined eSATA/USB 3.0 Port

**USB 3.0 Ports**

USB 3.0 ports are denoted by their blue color; USB 2.0 ports are colored black. Note that the USB 3.0 port requires a driver installation (see “USB 3.0” on page 4 - 7) and is not operational under DOS.
Multi-In-1 Card Reader

The card reader allows you to use the most popular digital storage card formats:

- MMC (MultiMedia Card) / RS MMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC
- MS (Memory Stick) / MS Pro / MS Duo

The card reader features a push-in/push-out card insertion and ejection mechanism. Simply push the card to insert and eject it, however Ms Duo cards require an adapter.

HDMI Port

Note that the HDMI Port supports video and audio signals to attached external displays (also see “HDMI Audio Configuration” on page C - 18). Note that THX TruStudio Pro will be disabled when you are connecting to an external display through an HDMI connection (see page 7 - 110).

1. Headphone-Out Jack
2. Microphone-In Jack
3. S/PDIF-Out Jack
4. USB 2.0 Port
5. Optical Device Drive Bay
6. Security Lock Slot
7. Battery

CD/DVD Emergency Eject

If you need to manually eject a CD/DVD (e.g. due to an unexpected power interruption) you may push the end of a straightened paper clip into the emergency eject hole. Do not use a sharpened pencil or any object that may break and become lodged in the hole. Don't try to remove a floppy disk/CD/DVD while the system is accessing it. This may cause the system to "crash".

Disk Eject Warning

Don't try to eject a CD/DVD while the system is accessing it. This may cause the system to "crash". Stop the disk first then eject it, or press the stop button twice.
**Quick Start Guide**

**Figure 1 - 7**  
**Bottom View**

---

**System Map: Bottom View - Model A**

**Battery Information**

Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See “Battery Information” on page 3 - 12 for full instructions.

---

**CPU**

The CPU is not a user serviceable part.

**Overheating**

To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intake while the computer is in use.
Battery Information
Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See “Battery Information” on page 3 - 12 for full instructions.

CPU
The CPU is not a user serviceable part.

Overheating
To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intake while the computer is in use.
Quick Start Guide

Windows 7 Start Menu & Control Panel

Most of the control panels, utilities and programs within Windows 7 (and most other Windows versions) are accessed from the Start menu. When you install programs and utilities they will be installed on your hard disk drive, and a shortcut will usually be placed in the Start menu and/or the desktop. Right-click the Start menu icon , and then select Properties if you want to customize the appearance of the Start menu.

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel is accessed from the Start menu, and it allows you to configure the settings for most of the key features in Windows (e.g. power, video, network, audio etc.). Windows 7 provides basic controls for many of the features, however many new controls are added (or existing ones are enhanced) when you install the drivers. To see all controls it may be necessary to toggle off Category View to view the control panel icons.
Video Features

NVIDIA® Optimus™ Technology

NVIDIA® Optimus™ technology is a seamless technology designed to get best performance from the graphics system while allowing longer battery life, without having to manually change settings. When the computer is in Optimus Mode it will automatically switch between the integrated UMA (Unified Memory Architecture) GPU (iGPU) and the discrete GPU (dGPU) when required by the applications in use. This switch is seamless to the user and does not require any use of the GPU button (see “NVIDIA® Optimus™ Technology” on page B - 2).

The GPU button allows you to switch between the Optimus Mode (where GPU switching is automatically handled) and UMA Mode (for constant power-saving with the integrated GPU only).

*Table 1 - 7 - GPU Modes & GPU LED Indicators*

You can switch display devices, and configure display options, from the Display control panel (in Appearances and Personalization) in Windows 7 (see over). For more detailed video information see “Video Driver Controls” on page B - 1.
Quick Start Guide

To access Display (Control Panel) and Screen Resolution in *Windows*:

1. Click **Start** and click **Control Panel**.
2. Click **Display** (icon) - In the **Appearances and Personalization** category.
3. Click **Adjust Screen Resolution/Adjust resolution**.
4. Alternatively you can right-click the desktop and select **Screen resolution**.
5. Use the dropbox to select the screen **Resolution** (`Figure 1 - 10`).
6. Click **Advanced settings** (`Figure 1 - 10`) to bring up the **Advanced** properties tabs.

*Figure 1 - 10 - Screen Resolution*
To access the Intel(R) Graphics and Media Control Panel:
1. Click Advanced settings (Figure 1 - 10 on page 1 - 22) in the Display Settings control panel in Windows.
2. Click Graphics Properties (button) (Figure 1 - 11) in the Intel Graphics & Media Control Panel tab.
   OR
3. Right-click the desktop and select Graphics Properties from the menu.
   OR
4. Click the icon (Figure 1 - 11) in the taskbar and select Graphics Properties from the menu.
   OR
5. Access the Intel(R) Graphics and Media Control Panel from the Windows control panel in Classic View.
6. Choose the application mode (Basic, Advanced or Wizard) required.
Quick Start Guide

To access the NVIDIA Control Panel:
1. Right-click the desktop and select NVIDIA Control Panel (Figure 1-12).
OR
2. Double-click the icon (Figure 1-12) in the Windows control panel.

Figure 1 - 12 - NVIDIA Control Panel
Power Options

The **Power Options** (Hardware and Sound menu) control panel icon in **Windows** (see page 1 - 19) allows you to configure power management features for your computer. You can conserve power by means of **power plans** and configure the options for the **power button**, **sleep button**, **computer lid (when closed)**, **display** and **sleep** mode from the left menu. Note that the **Power saver** plan may have an affect on computer performance.

Click to select one of the existing plans, or click **Create a power plan** in the left menu and select the options to create a new plan. Click **Change plan settings** and click **Change advanced power settings** to access further configuration options.

Pay attention to the instructions on battery care in **“Battery Information” on page 3 - 12.**

![Power Options](image1.png)

*Figure 1 - 13 - Power Options*
MOFA LCD Back Covers - Model A

MOFA (Magic of Film Art) technology allows fashionable and unique pictorial designs to be printed on the specially designed changeable LCD back covers. If your purchase option includes the specially designed changeable LCD back cover option (some Model A Computers Only), then follow the instructions in “Changing the Optional LCD Back Covers” on page 6 - 12 to change the covers (note these covers are not applicable to all models in this series - consult your service center for details).

Figure 1 - 14 - Magic Of Film Art Optional LCD Back Covers
Chapter 2: Storage Devices, Audio & Mouse

Overview

Read this chapter to learn more about the following main features and components of the computer:

- Hard Disk Drive
- Optical Device
- Multi-in-1 Card Reader
- Audio Features
- TouchPad and Buttons/Mouse
Hard Disk Drive

The hard disk drive(s) is(are) used to store your data in the computer. The hard disk(s) can be taken out to accommodate other 2.5" serial (SATA) hard disk drives with a height of 9.5 mm. The hard disk(s) is(are) accessible after removing the component bay cover from the bottom of your computer as seen below.

Further details on removing and inserting the hard disk are available in “Upgrading the Hard Disk Drive(s)” on page 6 - 9.

Model A (with 1 * HDD installed)  Model B (with 2 * HDDs installed)
Optical Device

There is a bay for a 5.25" optical (CD/DVD) device (12.7mm height). The actual device will depend on the model you purchased (see “Storage” on page D - 4). The optical device is usually labeled “Drive D:” and may be used as a boot device if properly set in the BIOS (see “Boot Menu” on page 5 - 13).

Loading Discs

To insert a CD/DVD, press the open button 1 and carefully place a CD/DVD onto the disc tray with label-side facing up (use just enough force for the disc to click onto the tray’s spindle). Gently push the CD/DVD tray in until its lock “clicks” and you are ready to start. The busy indicator 2 will light up while data is being accessed, or while an audio/video CD, or DVD, is playing. If power is unexpectedly interrupted, insert an object such as a straightened paper clip into the emergency eject hole 3 to open the tray.

Figure 2 - 2
Optical Device

Sound Volume Adjustment

How high the sound volume can be set depends on the setting of the volume control within Windows. Click the Volume icon on the notification area to check the setting.

Peripherals must be connected before you turn on the system.
Handling CDs or DVDs

Proper handling of your CDs/DVDs will prevent them from being damaged. Please follow the advice below to make sure that the data stored on your CDs/DVDs can be accessed.

Note the following:

• Hold the CD or DVD by the edges; do not touch the surface of the disc.
• Use a clean, soft, dry cloth to remove dust or fingerprints.
• Do not write on the surface with a pen.
• Do not attach paper or other materials to the surface of the disc.
• Do not store or place the CD or DVD in high-temperature areas.
• Do not use benzene, thinner, or other cleaners to clean the CD or DVD.
• Do not bend the CD or DVD.
• Do not drop or subject the CD or DVD to shock.
To change the DVD regional codes:

1. Go to the Control Panel
2. Double-click Device Manager (Hardware and Sound), then click the + next to DVD/CD-ROM drives.
3. Double-click on the DVD-ROM device to bring up the Properties dialog box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code.

- **Region 1** - USA & Canada
- **Region 2** - Western Europe, Japan, South Africa, Middle East & Egypt
- **Region 3** - South-East Asia, Taiwan, South Korea, The Philippines, Indonesia, Hong Kong
- **Region 4** - South & Central America, Mexico, Australia, New Zealand
- **Region 5** - N Korea, Russia, Eastern Europe, India & Most of Africa
- **Region 6** - China

**DVD Region Note**

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer.
Multi-in-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk(s). Make sure you install the Card Reader driver (see “Card Reader” on page 4 - 7).

- MMC (MultiMedia Card) / RSMMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC
- MS (Memory Stick) / MS Pro / MS Duo

Note: Some of these cards require PC adapters that are usually supplied with the cards.

Figure 2 - 4
Left View
1. Card Reader
Audio Features

You can configure the audio options on your computer from the Sound control panel in Windows, from the HD VDeck icon on the desktop or VIA HD Audio Deck control panel.

The volume may also be adjusted by means of the Fn + F5/F6 key combination.
**Storage Devices, Audio & Mouse**

**Expert Mode** will allow you to access more advanced configuration menus for **Speaker**, **Microphone** and **Stereo Mix**.

**Syncing Left & Right Volume Balance**

If you wish to adjust the left and right channel volume levels separately, you will need to adjust this from the VIA HD Audio Deck in **Expert Mode**.

Click **Speaker** in VIA HD Audio Deck (in Expert Mode) and click the Sync Left and Right volume button (see left). You can then adjust the volume sliders independently (this setting also controls the **Balance** setting in the Windows **Sound** control panel).

*Figure 2 - 6*

VIA HD Audio Deck (Expert Mode)

Note that to adjust the Left & Right volume balance independently click the Sync Left and Right Volume icon (it should be faded) and adjust the slider as required.
TouchPad and Buttons/Mouse

The TouchPad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The TouchPad buttons function in much the same way as a two-button mouse.

Mouse Driver

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.
Elan TouchPad

Once you have installed the TouchPad driver (see “TouchPad” on page 4 - 7) you can configure the functions by double-clicking the TouchPad driver icon in the notification area of the taskbar (or from Options in the ELAN tab in the Mouse control panel in Windows). You may then configure the gestures and options to your preferences.

TouchPad Scrolling

This computer model series may feature different TouchPad versions.

These TouchPads may differ in their vertical scrolling function in most scrollable windows.

Some TouchPads require sliding the finger up and down on the right of the TouchPad to scroll the window. Other versions require tapping/holding down the finger at the top right or bottom right of the TouchPad to scroll the window.

Figure 2 - 7
Mouse Properties (ELAN tab) & Taskbar Icon
The Elan Smart-Pad control panel allows you to use a specific gesture (action) on the surface of the TouchPad to perform specific actions to manipulate documents, objects and applications.

Click the menu tabs (One-finger, Multi-finger or Additional) and then the function button on the left to access the Configuration controls in the right panel. Click the checkbox to Enable most of the controls and click Apply to save the settings. Click the close icon or Yes to close the control panel.
Click the **Function Description** button to get a detailed description of any function.

Click the **Default** button to set any of the functions to the default setting.

**Figure 2 - 9**
Smart-Pad Control Panel with Function Description
One-Finger

Tapping
The Smart-Pad supports one, two and three finger tapping, all configured from the Tapping control panel in the One-finger tab. You can configure two or three finger tapping to perform a number of different functions by selecting them from the drop-down menus provided.

Figure 2 - 10
Tapping

Button
The left and right TouchPad buttons may be configured to perform any action listed in the Button drop-down menu.

Figure 2 - 11
Button
Drag and Drop
You can select the different drag and drop methods from the menu provided. The ob-
ject can be released when you lift the finger off the TouchPad, when you tap again
or after a set time delay.

Figure 2 - 12
Drag and Drop
Multi-Finger

Zooming
Place two fingers on the TouchPad (for best results use the tips of the fingers) and slide them apart to zoom in, or closer together to zoom out.

Scrolling
The Two-Finger scrolling feature works in most scrollable windows and allows you to scroll horizontally and vertically. Tap the pad surface and slide both fingers in the direction required (vertically or horizontally as long as the option is selected).
**Rotation**
You can rotate objects by using a two-finger gesture. Touch and rotate using two fingers on the pad in the direction required. Alternatively place a finger down on the pad and rotate the other finger around it in a circular motion (clockwise or counterclockwise).

*Figure 2 - 15  
Rotation*

**Swipe Page**
This gesture is used to activate a Page Up/Page Down operation. Swipe three fingers quickly to the left to go to the previous page, or to the right to go to the next page. After you release your fingers from the pad the page changes, and make sure to lift your fingers immediately after the page change.

*Figure 2 - 16  
Swipe Page*
Fast Keys
The Fast Keys gesture allows you to switch windows or open My Computer.

My Computer (Fast Keys)
Tap three fingers simultaneously on the pad and then move them up until you get to the My Computer window, you can then release the fingers from the pad.

Switch Windows (Fast Keys)
Tap three fingers simultaneously on the pad and then move them down until the active window switches, you can then use a single finger to select the window required.
Additional

Palm Tracking
This feature helps guard against accidental contact such as palms resting on the pad. Use the slider to adjust the sensitivity of the feature as appropriate.

Figure 2 - 18
Palm Tracking

Sensitivity
Adjust the sensitivity, using the slider, to determine the level of pressure required to be exerted by the finger for a response from the pointer/cursor.
Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system.

This chapter covers:

• The Power Sources
• Turning On the Computer
• Power Plans
• Power-Saving States
• Configuring the Power Buttons
• Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user’s manual of your operating system.

(Note: All pictures used on the following pages are from the Windows 7 OS.)
The Power Sources

The computer can be powered by either an AC/DC adapter or a battery pack.

AC/DC Adapter

Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. Attach the AC/DC adapter to the DC-In jack on the left of the computer.
2. Plug the AC power cord into an outlet, and then connect the AC power cord to the AC/DC adapter.
3. Raise the lid/LCD to a comfortable viewing angle.
4. Press the power button on the top left of the computer for about 2 - 3 seconds to turn the computer “on” (note that the power LED on the front of the computer will turn from orange to green when the computer powers on).

Battery

The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “How do I completely discharge the battery?” on page 3 - 15).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 11.
Turning On the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options in the Windows control panel to configure this feature.

Forced Off

If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for 4 seconds, or longer, to force the system to turn itself off.

Power Button as Stand by or Hibernate Button

You can use the OS’s Power Options control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS’s documentation, or “Configuring the Power Buttons” on page 3 - 8 for details).

Shut Down

Note that you should always shut your computer down by choosing the Shut Down command from the bottom right of the Start menu in Windows. This will help prevent hard disk or system problems.
Power Management

Power Plans

The computer can be configured to conserve power by means of power plans. You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

![Figure 3-1: Power Plan Advanced Settings (Win 7)](image)

Resuming Operation

See Table 3 - 1, on page 3 - 9 for information on how to resume from a power-saving state.

Password

It is recommended that you enable a password on system resume in order to protect your data.
Each Windows power plan will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose High performance (you may need to click Show additional plans to view the High performance plan) for maximum performance when the computer is powered from an AC power source. Choose the Power saver (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.
Power Management

Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. *Win* 7 uses the **Sleep**, **Hibernate** and **Shut Down** power-saving states.

**Sleep**

In **Sleep** all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter **Sleep** to save power.

The PC wakes from **Sleep within seconds** and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in **Sleep** is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.
**Hibernate**

*Hibernate* uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. *Hibernate* will also return you to where you last left off within seconds. You should put your mobile PC into *Hibernate* if you will not use the computer for a period of time, and will not have the chance to charge the battery.

**Shut down**

You should *Shut down* the computer if you plan to install new hardware (don’t forget to remove the battery and follow all the safety instructions in Chapter 6), plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from *Shut down* takes longer than from *Sleep* or *Hibernate*.

*Figure 3 - 3*

*Start Menu Power*
Configuring the Power Buttons

The power/sleep button (Fn + F4 key combo) and closed lid may be set to send the computer into a power-saving state. Click Choose what the power buttons do on the left menu in Power Options to bring up the menu.

Password Protection

It is recommended that you enable a password on wake up in order to protect your data.

However you can disable this setting from the Power Options menu by clicking Require a password on wakeup in the left menu, and selecting the options (click Change settings that are currently unavailable).

Figure 3 - 4
Power Options Define Power Buttons
Resuming Operation
You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (\texttt{Fn + F4} key combo).

<table>
<thead>

<td>Press a Key or Move the Mouse/Touchpad</td>
</tr>
</tbody>
</table>

Closing the Lid
If you have chosen to send the computer to Sleep when the lid is closed, raising the lid will wake the system up.

Table 3 - 1
Resuming Operation

Power Button
When the computer is on, you can use the power button as a Sleep/Hibernate/Shut Down hot key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will force the computer to shut down).
Power Conservation Modes

This system supports Energy Star power management features that place computers (CPU, hard drive, etc.) into a low-power sleep modes after a designated period of inactivity. Adjust Power Conservation Modes from the Control Center:

1. Press the **Fn + Esc** key combination to toggle the Control Center on/off.
2. Click either the **Performance**, **Balanced** or **Energy Star** button.
3. Click in a blank area of the icon or press a key on the keyboard to exit Power Conservation Mode without making any changes.
Battery Information

Follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan **Change plan settings > Change advanced power settings** (see **Figure 3 - 1 on page 3 - 4**).

Click the battery icon in the notification area to see the current battery level and charge status.

![Battery Icon](image)

**Figure 3 - 6 Battery Icon (Notification Area) & Battery Advanced Settings**

- **Low Battery Warning**: When the battery is critically low, immediately connect the AC/DC adapter to the computer or save your work, otherwise, the unsaved data will be lost when the power is depleted.
Power Management

Conserving Battery Power

- Use a **power plan** that conserves power (e.g. **Power saver**), however note that this may have an affect on computer performance.
- Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
- Reduce the amount of time before the display is turned off.
- Close wireless, Bluetooth, modem or communication applications when they are not being used.
- Disconnect/remove any unnecessary external devices e.g. USB devices.

**Figure 3 - 7**

*Windows Mobility Center*
Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days.

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason (e.g. long term storage) see “Removing the Battery” on page 6 - 4.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 15 for instructions on how to do this).

Recharging the Battery with the AC/DC Adapter
The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. (Refer to “LED Indicators” on page 1 - 9 for information on the battery charge status, and to “Battery Information” on page 3 - 11 for more information on how to maintain and properly recharge the battery pack.)
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances.
- DO NOT expose the battery to fire or high temperatures, it may explode.
- DO NOT connect the metal terminals (+, -) to each other.

**Danger of explosion if battery is incorrectly replaced.**

Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer's instructions.

**Damaged Battery Warning**

Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your service center. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. Create a power plan for discharging the battery and set all the options to Never.

Figure 3-8
Power Plan Create
3. Click *Change plan settings* (after creating it) and click *Change plan settings > Change advanced power settings.*

**Figure 3 - 9**
Change Plan Settings / Change Advanced Power Settings
4. Scroll down to **Battery** and click + to expand the battery options.
5. Choose the options below (click **Yes** if a warning appears):

- Low battery levels = 0%
- Critical battery Levels = 1%
- Low battery action = Do Nothing
- Critical battery action (On battery) = Shut Down
- Critical battery action (Plugged in) = Do Nothing
Power Management

How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

The *Device Drivers & Utilities + User’s Manual* disc contains the drivers and utilities necessary for the proper operation of the computer. *Table 4 - 1, on page 4 - 3* lists what you need to install and it is very important that the drivers are installed in the order indicated.

Module Driver Installation

The procedures for installing drivers for the **PC Camera, WLAN, Fingerprint**, and **Combination Bluetooth & WLAN** modules (you should also install the **THX Studio Pro Audio** and **Intel Rapid Storage Technology** drivers as instructed in Chapter 7) are provided in “*Modules” on page 7 - 1.*
Driver Installation

Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button), or Option Drivers (button) to access the Optional driver menu.

1. Check the driver installation order from Table 4 - 1, on page 4 - 3 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.
2. Click to select the driver you wish to install, (you should note down the drivers as you install them).
3. Follow the instructions for each individual driver installation procedure as listed on the following pages.

Note: If you need to reinstall any driver, you should uninstall the driver first.
### Table 4 - 1 - Driver Installation

Note all drivers provided are for Windows 7 with Service Pack 1.

Note that for Intel and some 3rd party WLAN & Bluetooth Combo modules you need to install both the WLAN & Bluetooth drivers.

</tbody>
</table>
Drivers & Utilities

Manual Driver Installation
Click the **Browse CD/DVD** button in the *Drivers Installer* application and browse to the executable file in the appropriate driver folder.

Windows Update
After installing all the drivers make sure you enable **Windows Update** in order to get all the latest security updates etc. (all updates will include the latest hotfixes from Microsoft). See “**Windows Update**” on page 4 - 8 for instructions.

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the **Control Panel** in the *Windows OS* and double-click the **Programs and Features** icon (**Programs > Uninstall a program**). Click to select the driver (if it is not listed see below) and click **Uninstall**, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the **Programs and Features** menu:

1. Click **Start**, and click **Control Panel** (or point to **Settings** and click **Control Panel**).
2. Double-click **Device Manager** (**Hardware and Sound > Device Manager**).
3. Double-click the **device** you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click **Driver** (tab) and click the **Update Driver** or **Uninstall** button and follow the on screen prompts.
User Account Control
If a User Account Control prompt appears as part of the driver installation procedure, click Continue/Allow, and follow the installation procedure as directed.

Windows Security Message
If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or Install to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found
If you see the message “New Hardware Found” during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.
Driver Installation Procedure
Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button), or Option Drivers (button) to access the Optional driver menu.

Driver Installation General Guidelines
The driver installation procedure outlined in this Chapter (and in Chapter 7 Options & Modules), are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. Next > Next > Finish) unless you are an advanced user. In many cases a restart is required to install the driver.

Chipset
1. Click 1.Install Chipset Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

Video (VGA)
1. Click 2.Install VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

NVIDIA Video (VGA)
1. Click 3.Install nVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next > Next.
4. Click the RESTART NOW button to restart the computer.

Note: After installing the video driver go to the Display/Display Settings control panel to adjust the video settings to the highest resolution.

LAN
1. Click 4.Install LAN Driver > Yes.
2. Click Next > Install.
3. Click Finish.
Card Reader
1. Click 5. Install Cardreader Driver > Yes.
2. Click Finish.

TouchPad
1. Click 6. Install Touchpad Driver > Yes.
2. Click Next.
3. Click the button to accept the license, and then click Next.
4. Click Finish > Restart Now to restart the computer.

Hot Key
1. Click 7. Install Hotkey AP > Yes.
2. Click Next > Next.
3. Click Finish > Finish to restart your computer.

USB 3.0
1. Click 8. Install USB 3.0 Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

MEI Driver
1. Click 9. Install MEI Driver > Yes.
2. Click Next > Yes > Next.
3. Click Finish.

Audio
1. Click 10. Install Audio Driver > Yes.
2. Click Next.
3. Click the button to agree to the license and click Next.
4. Click Next > Next > Next.
5. Click Finish to restart the computer.

After installing the audio driver the system will not return to the Drivers Installer screen. To install any of the optional drivers, eject the Device Drivers & Utilities + User’s Manual disc and then reinsert it (or double-click the disc icon in My Computer), and click Option Drivers (button) to access the optional driver menu.
Drivers & Utilities

It is recommended that you install the THX Tru Studio Pro Audio application (see “THX TruStudio AP Installation” on page 7 - 88) and Intel Rapid Storage Technology driver (see “Intel® Rapid Storage Technology Driver” on page 7 - 93 - required for AHCI mode).

Windows Experience Index

After Video (VGA) driver has been installed, and the system restarted, the OS will automatically run the "Winsat.exe" to rate the performance. If you have restarted the system during this time then follow the instructions below to update the information.

After the drivers are installed follow this procedure to ensure an accurate rating from the Windows Experience Index (make sure the AC/DC adapter is plugged in):

1. Click Start, and click Control Panel.
2. Click Performance Information and Tools (System and Security > System > Check the Windows Experience Index).
3. Click “Rate this computer/Refresh Now/Run the assessment”.
4. The computer will take a few minutes to assess the system performance.
5. Close the control panel.

Windows Update

After installing all the drivers make sure you enable Windows Update in order to get all the latest security updates etc. (all updates will include the latest hotfixes from Microsoft).

To enable Windows Update make sure you are connected to the internet:
1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Click Windows Update (System and Security/Security).
3. Click Check for updates (button).
4. The computer will now check for updates (you need to be connected to the internet).
5. Click Install now (button) to begin checking for the updates.
6. Click Install updates (button) to install the updates.
Optional Drivers

See the pages indicated in *Table 4 - 1, on page 4 - 3* for the driver installation procedures for any modules included in your purchase option.

![Optional Drivers Installer Screen](image)

*Figure 4 - 3 - Optional Drivers Installer Screen*

*Note that for Intel and some 3rd party WLAN & Bluetooth Combo modules you need to install both the WLAN & Bluetooth drivers.*
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software:

Diagnostics: The POST (Power-On Self Test)

Configuration: The Setup utility

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in Setup. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: Don’t make any changes unless you are sure of what you are doing. Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.

BIOS Screens

Note that the BIOS screens pictured on these pages are intended for guidance in setting up your system's BIOS.

BIOS versions are subject to constant change and revision, therefore your computer’s actual screens may appear slightly different from those pictured on these pages.
The Power-On Self Test (POST)

If you enable the **Boot-time Diagnostic Screen** in the Setup Utility, each time you turn on the computer the system takes a few seconds to conduct a **POST**, including a quick test of the on-board RAM (memory).

As the **POST** proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run **Setup**.

If there are no problems, the **Setup** prompt will disappear and the system will load the operating system. Once that starts, you can’t get into **Setup** without rebooting.
Failing the POST
Errors can be detected during the POST. There are two categories, “fatal” and “non-fatal”.

Fatal Errors
These stop the boot process and usually indicate there is something seriously wrong with your system. Take the computer to your service representative or authorized service center as soon as possible.

Non-Fatal Errors
This kind of error still allows you to boot. You will get a message identifying the problem (make a note of this message!) and you can then press F7 (the F7 on screen will be highlighted to illustrate that the system is processing the request) for boot options.

Press F2 (give the system a few seconds to enter Setup; the F2 on screen will be highlighted to illustrate that the system is processing the request) to run the Setup program and try to correct the problem. If you still get an error message after you change the setting, or if the “cure” seems even worse, call for help.
The Setup Utility

The **Aptio Setup Utility** tells the system how to configure itself and manage basic features and subsystems (e.g. port configuration).

**Entering Setup**

To enter *Setup*, turn on the computer and press **F2** (give the system a few seconds to enter *Setup*; the **F2** on screen will be highlighted to illustrate that the system is processing the request) during the **POST** (or press **F7** for boot options). If you get a “Keyboard Error”, (usually because you pressed **F2** too quickly) just press **F2** again.

If the computer is already on, reboot using the **Ctrl + Alt + Delete** combination and then hold down **F2** when prompted. The *Setup* main menu will appear.

To see the boot options press **F7**.

**BIOS Settings Warning**

Incorrect settings can cause your system to malfunction. To correct mistakes, return to *Setup* and restore the Previous Values with <F2>, or Optimized Defaults with <F3>.
Setup Screens

The following pages contain additional advice on portions of the Setup. Along the top of the screen is a menu bar with menu headings. When you select a heading, a new screen appears. Scroll through the features listed on each screen to make changes to Setup.

Instructions on how to navigate each screen are in the box at the bottom right side of the screen.

If these tools are confusing, press F1 to call up a General Help screen, and then use the arrow keys to scroll up or down the page.

The Item Specific Help on the upper right side of each screen explains the highlighted item and has useful messages about its options.

If you see an arrow next to an item, press Enter to go to a sub-menu on that subject. The sub-menu screen that appears has a similar layout, but the Enter key may execute a command.
Main Menu

System Time & Date (Main Menu)
The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.
SATA Port # (Main Menu)
Pressing Enter opens the sub-menu to show the configuration of a optical Device/HDD on the computer’s SATA Ports.

System/Extended Memory (Main Menu)
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.

MB Series / BIOS Revision / KBC/EC Firmware Revision (Main Menu)
This item contains information on the BIOS version and video card etc., and is not user configurable.
Advanced Menu

The sub-menu here allows you to adjust the **Bluetooth Power Setting**.
Bluetooth Power Setting (Advanced Menu > Advanced Chipset Control)
You can adjust the Bluetooth module power setting to your preference. The default setting (Disabled) will see the Bluetooth module powered off when the system is started up or restarted. Enabling the power setting will have the module retain the last power status (on or off) before any restart or shut down.

Intel(R) Rapid Start Technology (Advanced Menu)
Enable/disable Intel(R) Rapid Start Technology from this menu. The rapid start hibernation mode can resume power within 5 to 6 seconds and can remember your computer's state with zero power.

Intel Anti-Theft Technology (Advanced Menu)
Anti-Theft Technology, which is built-in to the processor of the computer, allows system administrators to render your computer useless to thieves by sending a poison pill encrypted SMS message over a 3G network etc. Administrators can also remotely unlock a recovered computer quickly, or direct the system to send location information (GPS coordinates) back to a central server.
SATA Mode (Advanced Menu)
You can configure SATA (Serial ATA) control to operate in IDE (native/compatible) or AHCI (Advanced Host Controller Interface) modes from this menu. The SATA Mode should be set BEFORE installing an operating system, and after you have backed up all necessary files and data (see sidebar). Make sure you install the Intel Rapid Storage Technology application if you have set the SATA Mode to AHCI (see “Intel® Rapid Storage Technology Driver” on page 7 - 93).

Boot Logo (Advanced Menu)
Use this menu item to enable/disable the Boot Logo screen at system startup.

Power On Boot Beep (Advanced Menu)
Use this menu item to enable/disable the beep as the computer starts up.

Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the battery low alarm beep.
**Security Menu**

*Set Supervisor Password (Security Menu)*

You can set a password for access to the *Aptio Setup Utility*. This will not affect access to the computer OS (only the *Aptio Setup Utility*).

The changes you make here affect the access to the *Setup* utility itself, and also access to your machine as it boots up after you turn it on. These settings do not affect your machine or network passwords which will be set in your software OS.

---

*Figure 5 - 4 Security Menu*
Note: To clear existing passwords press **Enter** and type the existing password, then press **Enter** for the new password (without typing any password entry) and **Enter** again to confirm the password clearance.

Note: *You can only set the user password after you have set the supervisor password.*

**Password on boot: (Security Menu)**

Specify whether or not a password should be entered to boot the computer (*you may only set a password on boot if a supervisor password is enabled*). If “**Enabled**” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “**Disabled**”.

Note: To clear existing passwords press **Enter** and type the existing password, then press **Enter** for the new password (without typing any password entry) and **Enter** again to confirm the password clearance.
Boot Menu

When you turn the computer on it will look for an operating system (e.g. Windows 7) from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot Option Priorities. Item specific help on the right is available to help you move devices up and down the order.
BIOS Utilities

*Fast Boot (Boot Menu)*
Enable this item to boot with the initialization with the minimum set of devices required for an active boot.

*Skip VGA/USB/PS2 (Boot Menu)*
If these items are enabled then BIOS will skip loading the EFI VGA driver/USB or PS2 devices.

*UEFI Boot (Advanced Menu)*
Enable/disable UEFI Boot from this menu. The Unified Extensible Firmware Interface (UEFI) specification provides a clean interface between operating systems and platform firmware at boot time. In contrast to BIOS, UEFI defines a set of standard boot and runtime services. See the sidebar warning.

*Boot Option Priorities (Boot Menu)*
Use the arrow keys to move up and down the menu, and go to either Network Device BBS Priorities, CD/DVD ROM Drive BBS Priorities or Hard Drive BBS Priorities and use the + and - keys to move the device’s boot priority up and down the list (the selected device will be highlighted in white).
Exit Menu

Click **Save Changes and Reset** to save all changes made. Choosing to **Discard Changes**, or **Exit Discarding Changes**, will wipe out any changes you have made to the **Setup**. You can also choose to restore the original setup defaults that will return the **Setup** to its original state, and erase any previous changes you have made in a previous session.
Chapter 6: Upgrading The Computer

Overview

This chapter contains information on upgrading the computer. Follow the steps outlined to make the desired upgrades. If you have any trouble or problems you can contact your service representative for further help. Before you begin you will need:

- A small crosshead or Phillips screwdriver
- A small regular slotted (flathead) screwdriver
- An antistatic wrist strap

Before working with the internal components you will need to wear an antistatic wrist strap to ground yourself because static electricity may damage the components.

The chapter includes:

- Removing the Battery
- Removing the Component Bay Cover
- Upgrading the Hard Disk Drive(s)
- Upgrading the Optical (CD/DVD) Device
- Upgrading the System Memory (RAM)

Please make sure that you review each procedure before you perform it.
When Not to Upgrade

These procedures involve opening the system’s case, adding and sometimes replacing parts. You should **not** perform any of these upgrades if:

- Your system is still under warranty or a service contract
- You don’t have all the necessary equipment
- You’re not in the correct environment
- You doubt your abilities

Under any of these conditions, contact your service representative to purchase or replace the component(s).

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines).

You must also remove your battery in order to prevent accidentally turning the machine on. **Before removing the battery disconnect the AC/DC adapter from the computer.**

Removal Warning

When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before turning restoring power to the system.

Also note the following when the cover is removed:

- Hazardous moving parts.
- Keep away from moving fan blades.
Upgrading the Processor
If you want to upgrade your computer by replacing the existing processor with a faster/new one you will need to contact your customer service representative. We recommend that you do not do this yourself, since if it is done incorrectly you may damage the processor or mainboard.
Removing the Battery

If you are confident in undertaking upgrade procedures yourself, for safety reasons it is best to remove the battery. Before removing the battery disconnect the AC/DC adapter from the computer first.

1. Turn the computer off, remove the AC/DC adapter and turn it over.
2. Slide the latch 1 in the direction of the arrow.
3. Slide the latch 2 in the direction of the arrow, and hold it in place.
4. Slide the battery out of the compartment in the direction of the arrow 3.

---

Warranty Warning

Please check with your service representative before undertaking any upgrade procedures to find out if this will VOID your warranty.

Figure 6 - 1
Battery Removal
Removing the Component Bay Cover

To upgrade any components you need to remove the component bay cover first. The procedure for removing the component bay cover will depend upon your particular computer model:
Removing the Component Bay Cover

1. Turn off the computer, and turn it over and remove the battery.
2. Locate the component bay cover and remove screws 1 & 2.
3. Slide the cover in the direction of arrow 3, by applying pressure at points 4 & 5 until the case markers 6 line up.

Figure 6 - 2
Component Bay Cover Removal
4. Remove the component bay cover 7.

Figure 6 - 3
Component Bay Cover Removal

Heat Sink Warning
When the cover is removed try to avoid contact (particularly when removing the secondary HDD) with the heat sink area 8.
Upgrading The Computer

Replacing the Component Bay Cover

1. Reinsert the component bay cover by placing it on the bottom case assembly and sliding it on to the case in the direction of arrow 1 by applying pressure at points 2 & 3.
2. Make sure the case markers 4 line up.

Figure 6 - 4
Component Bay Cover Replacement
Upgrading the Hard Disk Drive(s)

The hard disk Drive(s) can be taken out to accommodate up to two other 2.5" serial (SATA) hard disk drives with a height of 9.5mm (h) (see “Storage” on page D - 4). Follow your operating system’s installation instructions, and install all necessary drivers and utilities (as outlined in “Drivers & Utilities” on page 4 - 1), when setting up a new hard disk.

HDD System Warning

New HDD’s are blank. Before you begin make sure:
You have backed up any data you want to keep from your old HDD.
You have all the CD-ROMs and FDDs required to install your operating system and programs.
If you have access to the internet, download the latest application and hardware driver updates for the operating system you plan to install. Copy these to a removable medium.
Removing the Hard Disk from the Primary HDD Bay

Note that only Model B is pictured, however the procedure for removing the primary hard disk from Model A is the same.

1. Turn off the computer, and turn it over and remove the battery and component bay cover (see pages 6 - 4 & 6 - 6).
2. Lift up the protective rubber on the insulation plate at points 1 & 2.
3. Slide the HDD assembly in the direction of arrow 3.
4. Lift the HDD assembly out of the computer 4.

Figure 6 - 5
Primary HDD Assembly Removal
5. Remove screws 5 & 6 and the insulation plate 7.
6. Reverse the process to install a new disk and do not forget to reinstall the insulation plate and tuck the protective rubber carefully into the case to secure a tight fit.
7. Replace the component bay cover (see page 6 - 8).
Removing the Hard Disk from the Secondary HDD Bay

Note that only **Model B** is pictured, however the procedure for removing the primary hard disk from **Model A** is the same.

1. Turn **off** the computer, and turn it over and remove the battery and component bay cover (see pages 6 - 4 & 6 - 6).
2. Remove screws 1 & 2 from the secondary HDD assembly.
3. Slide the HDD assembly in the direction of arrow 3.
4. Lift the HDD assembly out of the computer 4.

**Figure 6 - 7**
Secondary HDD Assembly Screws & Removal

**Heat Sink Warning**
When removing the HDD assembly try to avoid contact with the heat sink area 5.
Upgrading The Computer

5. Remove screws 6 & 7 and the case bracket 8.

6. Reverse the process to install a new disk (pay careful attention to the orientation of the hard disk in the case bracket before tightening the screws).

7. Reinsert the HDD assembly back into the case and replace screws 1 & 2 (Figure 6 - 7 on page 6 - 12).

8. Replace the component bay cover (see page 6 - 8).

Heat Sink Warning
When replacing the HDD assembly try to avoid contact with the heat sink area.

Figure 6 - 8
Secondary Hard Disk Case Bracket Removal
Upgrading the Optical (CD/DVD) Device

The procedure for removing the optical device will depend upon your particular computer model:

• See “Removing the Optical Device for Model A Computers” on page 6 - 15.
• See “Removing the Optical Device for Model B Computers” on page 6 - 16.
Removing the Optical Device for Model A Computers

1. Turn off the computer, and turn it over and remove the battery and component bay cover (see pages 6 - 4 & 6 - 6).
2. Remove the screw at point 1, and use a screwdriver to carefully push out the optical device at point 2.
3. Reverse the process to install the new device.
4. Replace the component bay cover (see page 6 - 8).

Figure 6 - 9
Removing the Optical Device (Model A Computers)
Removing the Optical Device for Model B Computers

1. Turn off the computer, and turn it over and remove the battery and component bay cover (see pages 6 - 4 & 6 - 6).
2. Remove the primary HDD assembly (see page 6 - 10).
3. Remove the screw at point 1, and use a screwdriver to carefully push out the optical device at point 2.
4. Reverse the process to install the new device.
5. Replace the component bay cover (see page 6 - 8).
Upgrading the System Memory (RAM)

The computer has two memory sockets for 204 pin Small Outline Dual In-line (SO-DIMM) DDR III (DDR3) type memory modules (see “Memory” on page D - 3). The total memory size is automatically detected by the POST routine once you turn on your computer.
1. Turn off the computer, and turn it over and remove the battery and component bay cover (see pages 6 - 4 & 6 - 6).
2. The memory sockets will be visible at point 1 on the mainboard.

3. Gently pull the two release latches (2 & 3) on the sides of the memory sockets) in the direction indicated below.

Contact Warning
Be careful not to touch the metal pins on the module’s connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module’s performance.
Upgrading the System Memory (RAM) 6 - 19

4. The RAM module will pop-up, and you can remove it.

5. Pull the latches to release the second module if necessary.
6. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory socket.
7. The module’s pin alignment will allow it to only fit one way. Make sure the module is seated as far into the socket as it will go. DO NOT FORCE the module; it should fit without much pressure.
8. Press the module in and down towards the mainboard until the socket levers click into place to secure the module.
9. Replace the component bay cover (see page 6 - 8).

---

Single Memory Module Installation
If your computer has a single memory module, then insert the module into the Channel 0 (JDIMM1) socket. In this case this is the lower memory socket (the socket closest to the mainboard).

Contact Warning
Be careful not to touch the metal pins on the module’s connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module’s performance.
Upgrading The Computer
Chapter 7: Modules

Overview

This chapter contains the information on the various modules (some of which are optional) which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

The chapter includes information on the following:

• PC Camera Module
• Wireless LAN Module
• Intel® Wireless Display Application
• Fingerprint Reader Module
• Bluetooth Module
• 3.75G/HSPA Module
• THX TruStudio Pro Audio
• Intel® Rapid Storage Technology Driver
PC Camera Module

Before installing the driver, make sure the PC Camera is on. Use the Fn + F10 key combination, or Control Center button, to toggle power to the PC Camera module. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3.

There are a number of different camera modules available with this computer model series. You will have the appropriate application installed for your camera. Make sure you access the application via the desktop shortcut.

PC Camera Application and Power-Saving States

If the computer enters Sleep or Hibernate mode while running the camera application, the program will stop running, and will need to be restarted when the system resumes from the power-saving state.
PC Camera Driver Installation

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
2. Click **Option Drivers** (button).
3. Click **1.Install Webcam Driver > Yes**.
4. Click **Finish** to restart the computer.
   - OR
   - Click **Next > Install > Finish > Finish** to restart the computer.
   - OR
   - Click **Next > Finish**.
5. Run the camera application program from the desktop shortcut (if the hardware is turned off use the **Fn + F10** key combination, or Control Center button, to turn it on again).
Modules

PC Camera Audio Setup
If you wish to capture video & audio with your camera, it is necessary to setup the audio recording options in Windows.

1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Click Sound (Hardware and Sound).
3. Click Recording (tab).
4. Right-click Microphone (VIA High Definition Audio) and make sure the item is not disabled.
5. Double-click Microphone (or select Properties from the right-click menu).
6. Click Levels (tab), and adjust the Microphone and Microphone Boost sliders to the level required.
7. Click OK and close the control panels.
8. Run the camera application program from the desktop shortcut.
9. Go to the Devices menu heading and select Microphone (VIA....) (it should have a tick alongside it).
10. Go to the Capture menu heading and select Capture Audio (it should have a tick alongside it).
Figure 7 - 1
Audio Setup for PC Camera

Right-click
Modules

Camera Application
The camera application is a video viewer for general purpose video viewing and testing, and for capturing video files to .avi format.

1. Run the camera application from the desktop shortcut (it is recommended that you set the capture file before the capture process - see below).
2. Go to the Capture menu heading (if you wish to capture audio check “PC Camera Audio Setup” on page 7 - 4) and select Start Capture.
3. Click OK/Yes (the file location will be displayed in the pop-up box) to start capturing the video, and press Esc to stop the capture (you can view the file using the Windows Media Player).

Set Capture File
Prior to capturing video files you may select the Set Capture File... option in the File menu, and set the file name and location before capture (this will help avoid accidentally overwriting files). Set the name and location then click Open, then set the "Capture file size:" and click OK. You can then start the capture process as on the previous page.

Note the important information in “Reducing Video File Size” on page 7 - 7 in order to save file space, and help prevent system problems.
Reducing Video File Size
Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to My Computer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. CD, DVD or USB Flash drive.

Note that the Windows system requires a minimum of 15GB of free space on the C: drive system partition. In order to prevent system problems it is recommended that you save the captured video file to a location other than the C: drive (see “Set Capture File” on page 7 - 6), limit the file size of the captured video or reduce video resolution (see below).

To Reduce Video Resolution Output Size:
1. Run the camera application program from the desktop shortcut.
2. Go to Options and scroll down to select Video Capture Pin....
3. Click the Output Size drop box and select a lower resolution size in order to reduce the captured file size.
4. Click OK.
Eliminating Screen Flicker
If you find that the video screen in the camera program is flickering, you can try to adjust the setting in the Video Capture Filter options.

1. Run the camera application from the desktop shortcut.
2. Go to Options and scroll down to select Video Capture Filter....
3. Click either 50Hz or 60Hz under PowerLine Frequency.

Figure 7 - 2
Video Capture Filter

Camera Options
The video capture filter figure pictured here may appear slightly different for some camera modules. To adjust the anti flicker properties look under the headings Anti Flicker/Frequency/PowerLine Frequency.
Taking Still Pictures
The camera application allows you to take still pictures.

1. Run the camera application from the desktop shortcut.
2. Go to Options and select Take Picture.
3. The picture (in JPEG format) will be placed in the Snapshot folder on the desktop.

Snapshot Folder
The Snapshot folder’s default location is on the desktop. Do not move this folder or an error may appear when you try to take a still picture.

If you accidentally delete or move the folder, you can create a new Snapshot folder on the desktop in order to capture the files.
Wireless LAN Module

If you have included an Intel® or 3rd Party Wireless LAN (or WLAN & Bluetooth combo) module in your purchase option, make sure that the WLAN module is on before installing the driver.

Use the Fn + F11 key combination, or Control Center button, to toggle power to the Wireless LAN module. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3. The operating system is the default setting for Wireless LAN control in Windows 7.

Note that for the Intel, and one of the 3rd party, WLAN & Bluetooth Combo modules you need to install both the WLAN & Bluetooth drivers.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the Fn + F11 key combination to toggle power to the WLAN module, and check the LED to see if the module is powered on or not (see Table 1 - 5, on page 1 - 13 Table 1 - 3, on page 1 - 10).
There are two different drivers provided for 3rd party WLAN & Bluetooth combo modules. The appropriate driver for your system will be installed from the Option Drivers menu in the Device Drivers & Utilities + User’s Manual disc.

3rd Party 802.11b/g/n Driver Installation

If you see the message “Found New Hardware” click Cancel to close the window.

1. **Make sure the module is powered on**, and then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 2.Install WLAN Driver > Yes.

**Driver Version 1 (for WLAN & Bluetooth Combo V3.0):**

4. Choose the language you prefer and click Next > Next.
5. Click Finish to restart the computer.

**Driver Version 2 (for WLAN & Bluetooth Combo V4.0):**

4. Click Next.
5. Click Finish to restart the computer (see sidebar for important information).

**Note:** The operating system is the default setting for Wireless LAN control in Windows (see page 7 - 13).
Intel® Wi-Fi Link Series Driver Installation

If you see the message “Found New Hardware” click Cancel to close the window.

1. Make sure the module is powered on, then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
3. Click 2. Install WLAN Driver > Yes.
4. Click Next > Next.
5. Click the button to accept the license and click Next.
6. Click (for some driver versions you will need to select Typical or Custom) Next/Install > Next > Finish.

Note: The operating system is the default setting for Wireless LAN control in Windows (see overleaf).
Connecting to a Wireless Network in Windows 7

Make sure the Wireless LAN module is turned on.

1. **Click** the notification area wireless icon , and then double-click an access point to connect to or click to **Open Network and Sharing Center** if you do not see a network you want to connect to in the notification area menu (a list of options will appear allowing setting changes, and creating a new network).

   ![Network and Sharing Center](image)

   **Figure 7 - 3**

   Click Notification Area Icon Menu & Network and Sharing Center

   You can also use the **Network and Sharing Center** control panel in Windows (Network and Internet) to connect to any available wireless networks.
Modules

2. You may need to enter a security key for any access point to which you are trying to connect.
3. Click to select a network location (e.g. Home, Work or Public).
4. Click “View or change settings in Network and Sharing Center” to access further options for the connection.

Figure 7 - 4
Network Location
Set
5. Click the notification area icon to see any currently connected networks.
6. To disconnect from the wireless network you can click the notification area wireless icon, click the active connection and then click **Disconnect** (button).

**Security Enabled Networks**

You should try to make sure that any network you are connecting to is a secure network.

Connecting to unsecure networks may allow unauthorized access to your computer, documents, websites and files etc.

*Figure 7 - 5*  
Click Notification Area Icon Menu - Disconnect
Intel® My WiFi Configuration

Intel® My WiFi Technology uses your WLAN (for Intel WLAN modules only) module to allow you to connect up to eight other WiFi enabled devices (e.g. digital cameras, other computers, cell phones, handheld devices etc.) to your computer (similar to Bluetooth), while still connecting to the Internet through your WiFi wireless connection. Intel® My WiFi Technology offers greater range and speed than other personal area networks, and does not require an access point.

**Intel® My WiFi Help**
To get help on Intel® My WiFi configuration and settings, access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PRO-Set Wireless > Intel My WiFi Technology), or by clicking the notification area icon . Click the Help icon and select a help topic from the Contents menu.
Intel® My WiFi Configuration
You can configure the My WiFi settings as follows.

1. Access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by double-clicking the notification area icon.
2. Click Enable (on the first run of the program there will be no connected devices listed).
3. Click **Start** and click **Control Panel**.
4. Click **Network and Sharing Center** (Network and Internet).
5. Click **Change adapter settings**.

*Figure 7-7 Network and Sharing Center*
6. Right-click **Wireless Network Connection** and select **Properties**.

*Figure 7-8*  
Network Connections
7. Click **Sharing** (tab) and select "Allow other network users to connect through this computer’s Internet connection".
8. Select **Wireless Network Connection** under Home networking connection.
9. Click **OK**.

![Wireless Network Connection Properties - Sharing](image-url)
10. Access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by double-clicking the notification area icon.

11. Click Profiles.

![Figure 7-10 Intel® My WiFi Utility - Profiles](7)
12. Click Profiles, click Intel Wireless PAN and click Edit or New (Note that all preset settings may not be editable - see sidebar).

13. You can change the Profile Name and Network Name to your personal preferences in General (tab).

Profile and Network Names

The Profile Name is the name as displayed on your computer in the Network Connections control panel (see Figure 7 - 13 on page 7 - 23).

The Network Name (SSID) is the name the devices see when they try to connect to your computer.
14. Click **Security** (tab).
15. Change the **Security Type** to **WEP** and the **Encryption Type** to **64bit**.
16. Enter a password (8 characters long) in the **Password** box.

![Profile Settings](image)

*Figure 7 - 13
Intel® My WiFi
Profile Settings - Security*
17. Click **Sharing** (tab).
18. It is recommended that the **Filter Network Traffic** and **DHCP and DNS Server** are **Disabled**.
19. Click **Advanced** (tab).
20. It is recommended that the **Default Channel** is set to **Channel 1, 6 or 11**.
21. Click **OK** to save the settings.

![Image of Intel® My WiFi Profile Settings - Advanced]

*Figure 7 - 15*  
Intel® My WiFi Profile Settings - Advanced
22. Double-click **Wireless Network Connection** in **Network Connections**.
23. Click **Details** to display the **Network Connection Details**.

![Wireless Network Connection Details](image)

**Figure 7-16**
**Wireless Network Connection Details**
24. Access the Intel® My WiFi Utility from the Start menu (Start > Programs/All Programs > Intel PROSet Wireless > Intel My WiFi Technology), or by clicking the notification area icon.

25. To add a new device follow the instructions in the devices’ user guide for connecting to a WiFi network.

26. Click Add New Device in Intel® My WiFi Utility to confirm the security settings detail.
Intel WLAN & Bluetooth Combo Module High-Speed Data Transfer Configuration

You will need to configure the following settings to enable high-speed wireless data transfer as supported by Intel Wireless LAN & Bluetooth Combo modules (note this information applies to Intel WLAN & Bluetooth Combo modules only).

1. Go to the Windows control panel and double-click **Device Manager** (in Hardware and Sound under Devices and Printers).

![Figure 7-18 Devices and Printers (Device Manager)]
2. Click **Network adapters** to expand the sub-menu.
3. Double-click the **Intel WiFi Link ....** module.
4. Click **Advanced** (tab).
5. Click **802.11n Channel Width for band 2.4** under “Property:”.
6. Click the pull-down menu under “Value:”
7. Click to select **Auto**.
8. Click **OK** and close the control panels.

**Figure 7 - 19**
Intel WiFi Link Properties (Advanced)
Windows Mobility Center

The Windows Mobility Center control panel provides an easy point of access for information on battery status, power plans used and wireless device status etc.

To access the Windows Mobility Center:

1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Double-click Windows Mobility Center (Mobile PC).
3. Click the button to Turn wireless off/on, or click the icon to access the network menu.

Figure 7 - 20
Windows Mobility Center
Intel® Wireless Display Application

The Intel® Wireless Display Application (requires Intel® Centrino WLAN/Combo module), in conjunction with a compatible video adapter (purchased separately), allows you to display the contents of the notebook display on another display (e.g. HDTV) without the need to have cables stretching across a room. You can then play games, browse the internet, display videos or photo slide shows on your TV/external display without using HDMI or A/V cables.

Before configuring the Intel® WiDi application you will need to set up your compatible adapter with your display/speakers. Connect the adapter using an HDMI or A/V cable and turn on the display (or in the case of speakers connect them to the wireless speaker adapter with the cables provided with the adapter), and then set the display to the appropriate input channel (see the documentation supplied with your compatible adapter for full details).

Intel® WiDi also incorporates Intel® Wireless Music which allows you to wirelessly stream audio from your computer to speakers connected to a compatible wireless speaker adapter (purchased separately).
Intel® WiDi Application Installation

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
2. Click **Option Drivers** (button).
3. Click **3. Install WiDi AP > Yes**.
4. Click **Next**.
5. Click the button to accept the license and click **Next**.
6. Click **Finish**.

Intel® Wireless Music Driver Installation

If you wish to use your system to stream wireless audio to speakers connected to a compatible wireless speaker adapter you will need to install the Intel(R) Wireless Music Driver.

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
2. Click **Browse** and browse to the driver location (X: denotes your DVD drive):
   - X:\Options\02WLAN\Intel\WMusic\autorun.exe
3. Click **Next**.
4. Click the button to accept the license and click **Next**.
5. Click **Finish**.
6. Follow the procedure overleaf to setup WiDi or Wireless Music.
Intel® WiDi Application Configuration

1. Click **Start > All Programs > Intel Corporation > Intel(R) Wireless Display > Intel(R) Wireless Display**, or double click the icon on the desktop.

2. Click **I agree to the terms of this license** (button).

3. The application will scan for any connected compatible adapters (or you can click the **Scan for available adapters** button to enable **Intel My WiFi Technology**).

![Intel® WiDi Scan](image)
4. Click to select any detected adapters, and click **Connect**.
5. The system will then prompt you to enter the **4-digit security code** which will be displayed on the external TV Screen (or press the **connect** button on the wireless speaker adapter).
6. Enter the code for the video adapter and click **Continue**.

---

*Figure 7 - 22*
**Intel® WiDi Connect & Enter Security Code**
7. You will then be prompted to enter a name for the video adapter and click Continue.
8. Click **Finished** to complete the setup.

---

**Test Audio Adapter**

To verify a successful audio connection (for Intel® Wireless Music), select the "Test your audio connection" link or select "Finished" to bypass the test.

You can select "Play Sample" to play an audio test sample from your adapter to the connected speaker set.

---

*Figure 7 - 23*

**Intel® WiDi**

**Connected**
The **fingerprint reader** and **Protector Suite Software** allow you to:

- Access or Lock your computer
- Protect sensitive files
- Display and file your favorite web pages
- Fill in frequently used dialogs
- Run your favorite applications

If you have included the fingerprint reader in your purchase option you will need to install the driver as per the instructions below.

Make sure you have administrator’s rights to your computer, and have a **Windows** password enabled for full security protection.

Before beginning the enrollment process it is recommended that you go through the fingerprint tutorial (see *Figure 7 - 24 on page 7 - 38*).
Fingerprint Reader Driver Installation

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive.
2. Click Option Drivers.
3. Click 4.Install Finger Print Driver > Yes.
4. Click Next.
5. Click the button to accept the license and click Next.
6. Click Next > Install.
7. Click Finish > Yes to restart the computer.
8. Click Start > All Programs > AuthenTec TrueSuite.
AuthenTec TrueSuite Application

The AuthenTec TrueSuite application is used in conjunction with your fingerprint reader to enroll fingerprints and manage settings etc.

User Enrollment

1. Click Start > All Programs > AuthenTec TrueSuite.
2. Click Yes when you have identified your fingerprint sensor (Fingerprint Reader Module in Figure 1 - 2 on page 1 - 7).
3. Click Yes when you are ready to enroll your fingerprints.
4. Click on the fingerprint diagram to select any finger to enroll.
5. You will be required to enter your Windows password (you will be prompted to create a password if you have not already done so) at this point (click OK to confirm the password entry).
6. Swipe the finger until the progress bar reaches 100% to enroll that finger.
7. You will be prompted to select another finger for enrollment (it is recommended that you enroll a number of fingers - see sidebar).
8. Click the button to continue once you have enrolled a number of fingerprints.
9. Enter the required information and click the button to register your software, or click to register later.
10. Your fingerprints will now be enrolled (you may enroll any additional fingerprints at any time).

Figure 7 - 25
AuthenTec TrueSuite

Help
Click the Help icon and select a help topic from the drop-down menu. Get more help will provide a more comprehensive list of help topics.
Module 7 - 40 Fingerprint Reader Module

**Settings**

Click the **Settings** button on the menu bar to access the personalization settings for **AuthenTec TrueSuite**. Here you can choose to enable/disable Website Log On, QuickLaunch, Fast User Switching and the desktop icon. You can also select the Theme and export/import identities. Click the **Save** button to save any changes made.

*Figure 7-26  AuthenTec TrueSuite - Settings*
**Windows Log On**
Windows log on allows you to gain access to your computer by swiping your finger across the fingerprint reader sensor. Use the **Biometric Devices** control panel (in the **Hardware & Sound** category) in *Windows* to turn **Biometrics on/off** when required. Access the **Biometric Devices** control panel and select **Change biometric settings** to turn the biometrics on or off, or to allow users to log on to *Windows* using fingerprints.

![Figure 7 - 27 Biometric Devices Control Panel (Windows Hardware & Sound)](image)

When Biometrics is on, and “**Allow users to log on to Windows using their fingerprints**” is enabled, simple swipe your finger across the reader to log on to *Windows*. 
Website Log On
Use a fingerprint swipe to log on to websites to help you avoid having to remember
user names and passwords across multiple websites (browsers supported are Internet
Explorer, Firefox and Chrome).

Registering a Website
1. Use your web browser to navigate to the website required.
2. Enter your user name and password and sign in to the website.
3. An AuthenTec TrueStudio dialog box will pop-up.
4. Click Save Password to register the website.
5. The website will now be registered (and your log on and password information will
   be bolometrically stored) and you will be prompted to swipe a finger to log on to the
   website in future.
QuickLaunch

QuickLaunch allows you to drag and drop icons (which represent websites, folders, applications and/or computer actions) to any enrolled finger and then swipe your finger to launch the icons assigned to that finger.

1. Click **Start > All Programs > AuthenTec TrueSuite**.
2. Click **Select Category** to group icons if required.
3. Drag and drop an icon to an enrolled finger.
4. To launch the website, folder, application and/or action just swipe your finger across the sensor.
5. If you have entered the log on information for the website then a single swipe will launch the website(s), load the log on page and log on to your account.

![QuickLaunch Image](image-url)
Adding a Website to QuickLaunch
1. Click Start > All Programs > AuthenTec TrueSuite.
2. Click the Add Website button on the menu bar and the dialog box will be displayed.
3. Enter the website URL, name, icon and category as required.
4. Click Save and an icon will be associated with the selected website.
5. To delete an icon right-click it and select Delete Icon and it will no longer be associated with the finger.

Figure 7 - 31
QuickLaunch
Add Website

7 - 44 Fingerprint Reader Module
Dock View
Dock View displays the website icons across the bottom of the screen. Each icon will have an associated web card which displays the website information, user name and password etc. This information may be edited or deleted as required.

Editing a Web Card
1. Click **Start > All Programs > AuthenTec TrueSuite**.
2. Left-click a web card to bring up the associated information.
3. You can click the reveal/hide password button to see or hide the password.
4. Make any changes required and click Save to confirm the changes.
5. To delete a web card left-click it and click the **Delete** icon.
6. Click **Print** to print and web card and the password will be shown in plain text.
7. You can **Print all web cards** from the menu bar button if required.
Modules

Exporting and Importing Your Identity
You can export your identity to backup your information, or to move it to another computer.

Exporting Your Identity
1. Click Start > All Programs > AuthenTec TrueSuite.
2. Click the Settings button on the menu bar.
3. Click Export My Identity.
4. You will be required to enter and confirm a passphrase and click Next.
5. Browse to a location to Save the file.
6. Swipe a finger to confirm the export.

Importing Your Identity
1. Click Start > All Programs > AuthenTec TrueSuite.
2. Click the Settings button on the menu bar.
3. Click Import My Identity.
4. Browse to the location where the file is saved.
5. Select the file and click Open.
6. Type your passphrase and click Next.
7. The information will then be imported.
AuthenTec KeepSafe
The **KeepSafe folder** is an encrypted area assigned on your hard drive that allows you to store files and folders to be protected by fingerprint protection. The folder will appear on your desktop (if selected in the **Personalization Settings**) and in My Computer, but will not be visible to other users of your computer.

To **lock/unlock** the **KeepSafe** folder right-click it to display the context menu and select **Unlock/Lock**. You will be required to authenticate when unlocking the folder using either a fingerprint swipe or **Windows** password.

To add files to **KeepSafe** folder just open the folder and drag and drop files into the folder. You may also right-click any file to bring up the context menu and select **Add to KeepSafe** (you can select whether or not to keep or delete the original file).
Bluetooth Module

If your purchase option includes the Combination Wireless LAN & Bluetooth module (either Intel® or 3rd Party) then install the driver as instructed overleaf.

Use the Fn + F12 key combination (see Table 1 - 5, on page 1 - 13) or Control Center button to toggle power to the Bluetooth module.

• For 3rd party Bluetooth modules see the information provided overleaf on the two drivers provided.

• For Intel Bluetooth modules see the installation procedure see “Intel Bluetooth Combo Driver Installation” on page 7 - 58 and “Intel Bluetooth Combo Driver Installation” on page 7 - 58.
3rd Party Bluetooth Combo Driver Installation Information

There are two different drivers provided for 3rd party WLAN & Bluetooth combo modules for this computer.

- **Driver Version 1 (for WLAN & Bluetooth Combo V3.0)** requires the Bluetooth driver to be installed separately (see overleaf).

- **Driver Version 2 (for WLAN & Bluetooth Combo V4.0)** will install both the WLAN & Bluetooth drivers at the same time, and therefore it is not necessary to install the Bluetooth driver separately from the WLAN driver, which should have already been installed (a warning message will appear if you attempt to install the Bluetooth driver).

- Use the **“3rd Party Bluetooth & WLAN Combo Settings” on page 7 - 51** to configure the Bluetooth settings for Driver Version 1.

- Use the **“Intel Bluetooth Combo Driver Installation” on page 7 - 58** to configure the Bluetooth settings for Driver Version 2.

The appropriate driver for your system will be installed from the **Option Drivers** menu in the **Device Drivers & Utilities + User’s Manual** disc.
3rd Party Bluetooth Combo Driver Version 1 Installation

Note this driver is required for the 3rd Party combo Bluetooth and WLAN module version 1 (Bluetooth V3.0) only.

1. Before installing the driver make sure the Bluetooth module is powered on (use Fn + F12 key combination), then insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive. If a Found New Hardware window appears, click Cancel in all windows that appear, and then proceed to install the driver as below.

2. Click Option Drivers (button).
3. Click 5.Install Combo BT Driver > Yes.
4. Choose the language you prefer and click OK.
5. Click Next.
6. Click the button to accept the license and click Next.
7. Click Next > (select if you want to create an icon to appear on the desktop) Next > Install.
8. Click Finish.
9. The My Bluetooth icon will appear on the desktop and the Bluetooth item will be installed in the Programs/All Programs menu.
10. See “3rd Party Bluetooth Networking Setup” on page 7 - 54 for information on Bluetooth networking.

High Speed Bluetooth Data Transfer

The Combination Wireless LAN & V3.0 Bluetooth module supports high speed (V3.0) data transfer. However to achieve such transfer speeds, both devices must support high speed data transfer.

To obtain high speed (V3.0) data transfer make sure that both the WLAN and Bluetooth modules are powered on.

Check your Bluetooth compatible device’s documentation to confirm it supports high speed data transfer.
3rd Party Bluetooth & WLAN Combo Settings

This information applies to the combo Bluetooth and WLAN module driver version 1 (Bluetooth V3.0) only. For driver version 2 (Bluetooth V4.0) see “Intel Bluetooth Combo Driver Installation” on page 7 - 58.

1. Make sure the Bluetooth module is powered on.
2. Double-click the My Bluetooth application on the desktop (or access it from the Programs/All Programs menu).
3. Click My Bluetooth Settings (menu heading).

Figure 7 - 34
My Bluetooth Settings
4. Click **General Settings** to change the computer *name that other Bluetooth devices will see*, and click the tickbox to *Allow Bluetooth devices to find this computer*.

5. Click **OK** to confirm the settings.

![General Settings](image)

*Figure 7-35 General Settings*
6. Click **File Transfer Settings** to *Enable sharing of my files with other Bluetooth devices*.
7. Click **OK** to confirm the settings.

*Figure 7 - 36: File Transfer Settings*
3rd Party Bluetooth Networking Setup

This information applies to the combo Bluetooth and WLAN module driver version 1 (Bluetooth V3.0) only.

1. Make sure the Bluetooth module is powered on.
2. Double-click the My Bluetooth application on the desktop (or access it from the Programs/All Programs menu).
3. Click My Bluetooth Settings (see Figure 7 - 34 on page 7 - 51).

4. Click Network Settings (make sure the Bluetooth module is powered on).
5. Click Enable Bluetooth Network and click OK.
6. A message will appear in the notification area to confirm that the network driver has been installed.
3rd Party Bluetooth & WLAN Combo Module Configuration

Setup your Bluetooth Device so the Computer Can Find it
1. Turn your Bluetooth device (e.g. PDA, mobile phone etc.) on.
2. Make the device discoverable (to do this check your device documentation).

To Turn the Bluetooth Module On
1. Press the \texttt{Fn + F12} key combination to power on the Bluetooth module.

To Add a Bluetooth Device
1. Double-click the \textbf{My Bluetooth} application on the desktop (or access it from the \texttt{Programs/All Programs} menu).
2. Double-click the device you want to pair with the computer (if no devices appear press \texttt{F5} or click the \textbf{Refresh} button to search for devices).

\begin{figure}
\centering
\includegraphics[width=\textwidth]{my.bluetooth devices.png}
\caption{My Bluetooth Devices}
\end{figure}
3. You will then be presented with a menu of options to select from.

4. Click the appropriate button to connect to the device.
5. You may need to allow the connection from your device, and you will then need to provide a passcode from the device.
6. You can then enter the passcode on the computer and click OK to establish the connection.

![Bluetooth Pairing Code & Connection Established](image)

*Figure 7 - 40 Bluetooth Pairing Code & Connection Established*
**Intel Bluetooth Combo Driver Installation**

*Note this driver is required only for the Intel combo Bluetooth and WLAN module only.*

1. **Before installing the driver make sure the Bluetooth module is powered on** (use `Fn + F12` key combination), then insert the *Device Drivers & Utilities + User’s Manual* disc into the CD/DVD drive. If a *Found New Hardware* window appears, click *Cancel* in all windows that appear, and then proceed to install the driver as below.

2. Click *Option Drivers* (button).
3. Click *5.Install Combo BT Driver > Yes*.
4. Click *Next > Next*.
5. Click the button to accept the license and click *Next*.
6. Click *Next > Finish*.
7. See over for configuration instructions.

Note that, at the time of going to press, **Intel® Centrino® Wireless-N 2230**, **Intel® Centrino Advanced 6235** WLAN & Bluetooth combo modules use the standard Bluetooth configuration in *Windows 7* (see “Intel Bluetooth Combo Driver Installation” on page 7 - 58). **Do not use** the Bluetooth & WLAN Combo settings information outlined from page 7 - 51 to page 7 - 57.

---

### High Speed Bluetooth Data Transfer

The **Combination Wireless LAN & Bluetooth module** supports high speed data transfer. However to achieve such transfer speeds, **both devices must support high speed data transfer**.

To obtain high speed data transfer make sure that both the WLAN and Bluetooth modules are powered on.

Check your Bluetooth compatible device’s documentation to confirm it supports high speed data transfer.
Standard Bluetooth Configuration in Windows 7

For Intel and 3rd Party Driver Version 2 (Bluetooth V4.0) modules only.

Setup your Bluetooth Device so the Computer Can Find it
1. Turn your Bluetooth device (e.g. PDA, mobile phone etc.) on.
2. Make the device discoverable (to do this check your device documentation).

To Turn the Bluetooth Module On
1. Press the Fn + F12 key combination to power on the Bluetooth module.
2. A Bluetooth icon ☎️ will appear in the notification area.
3. You can then do any of the following to access the Bluetooth Devices control panel.
   • Double-click the notification area icon ☎️ to access the Bluetooth Devices control panel.
   • Click/Right-click the notification area icon ☎️ and choose an option from the menu.

Add a Device
Click Start, and click Control Panel and then click Devices and Printers (Hardware and Sound). Click Add a device to search for any available Bluetooth devices.

Bluetooth Module & Resuming From Sleep Mode
The Bluetooth module’s default state will be off after resuming from the Sleep power-saving state. Use the key combination (Fn + F12) to power on the Bluetooth module after the computer resumes from Sleep.

Figure 7 - 41
Bluetooth Devices & Click Icon Menu
To Add a Bluetooth Device
1. Access the Bluetooth Devices control panel and click Add a device.
2. Double-click the device you want to pair with the computer.
3. On first connection the computer will provide you with a pairing code to be entered onto the device.

Pairing Options
If a device has been previously connected then the pairing option menu will appear when you attempt subsequent connections. You can choose to have the computer create a pairing code for you, use the device’s existing pairing code or you can pair certain devices without using a code.
4. Enter the code into your Bluetooth enabled device and follow any on-screen instructions to complete the pairing.

5. **Windows** will check to see if any drivers are required to complete the pairing.

6. Follow any on-screen instructions on the computer if device drivers are required to be installed.

7. Click **Close**.

---

**Pairing Codes**

The example outlined here shows a connection to a mobile device. Other devices e.g. computers, may have a slightly different connection procedure, and may require you to confirm a pairing code is correct on both devices. Follow the on-screen instructions to complete the pairing.
To Change Settings for the Bluetooth Device
1. Click the notification area icon and select **Show Bluetooth Devices**.
2. Right-click on the device you want to change and click **Properties** to:
   • Change the **name** of the device (click **Bluetooth**, type a new name and click **OK**).
   • Enable/Disable a **service** (click **Services**, clear/tick the check box next to the service and click **OK**).

To Make your Computer Discoverable to Bluetooth Devices
1. Click the notification area icon and select **Open Settings**.
2. Click **Options**, and make sure that **Allow Bluetooth devices to find this computer** check box (**Discovery**) has a tick inside it.
3. Make sure that the **Alert me when a new Bluetooth device wants to connect** check box (**Connections**) has a tick inside it, if you want to be notified when a Bluetooth device wants to connect.

**Figure 7 - 45**
Bluetooth Settings - Options
3.75G/HSPA Module

If you have included an optional (for Model A Only) 3.75G/HSPA (High Speed Packet Access) module (see “Communication” on page D - 5 for specification details) in your purchase option, you will have the appropriate application provided for your module (Wireless Manager). Follow the instructions on page 7 - 64 to install the USIM card (which will be provided by your service provider), and then install the application.

Important Notice - 3.75G/HSPA & Bluetooth/Wireless LAN Modules

In order to comply with FCC regulations you should NOT operate the 3.75G/HSPA module and the Bluetooth/Wireless LAN modules at the same time as this may disrupt radio frequency, and cause interference. When the 3.75G/HSPA module is powered on, make sure that the Bluetooth/Wireless LAN modules are powered off.

3.75G Module Power

Note that when the computer resumes from a power saving state, is restarted or starts up after shutdown, the 3.75G module will be powered off.
3.75G/HSPA Module USIM Card Installation

Follow the instructions below to install the USIM card (which will be provided by your service provider).

1. Turn off the computer, and turn it over.
2. Slide the latch 1 in the direction of the arrow.
3. Slide the latch 2 in the direction of the arrow, and hold it in place.
4. Remove the battery.
5. Insert the USIM card (at the rear of the battery compartment) as illustrated below until it clicks fully into position, and replace the battery.

**Power Safety Warning**

Before you undertake any installation procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

**USIM Card Orientation**

Note that the USIM card’s readable side (with the gold-colored contacts) should face upwards as illustrated.
Before installing the application, make sure that the 3.75G/HSPA module is ON (installing the driver with the module off will not allow the software to detect the module hardware correctly). Use the \textbf{Fn + \#} key combination (see Table 1 - 4, on page 1 - 12) or Control Center button to toggle power to the 3.75G/HSPA module. Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3. Note that exiting the application does NOT turn off the 3.75G/HSPA module.

- \textbf{Wireless Manager} - See \textit{“Wireless Manager Installation” on page 7 - 66} for driver installation information and \textit{“Wireless Manager Application” on page 7 - 67} for instructions on using Wireless Manager.

\begin{itemize}
  \item \textbf{3.75G/HSPA Modules & System Wake Up}
  \end{itemize}

\begin{itemize}
  \item Note that the 3.75G modules \textbf{DO NOT} support system wake up on 3.75G/HSPA modem activity.
\end{itemize}
Wireless Manager

With the 3.75G/HSPA module and USIM card (supplied by your service provider) installed you may then install the Wireless Manager application. The Wireless Manager application allows you to directly access your HSPA internet service from the computer.

Wireless Manager Installation

1. Enable power to the module by pressing the **Fn** + \key combination (give the module about 10 seconds to power on).
2. If a *Found New Hardware* window appears, click **Cancel** (click **Cancel** for all *Found New Hardware* windows that appear).
3. Insert the *Device Drivers & Utilities + User’s Manual disc* into your DVD drive.
4. Click **Option Drivers** (button).
5. Click **5.Install 3G Driver > Yes**.
6. Click **Next > Next > Install**.
7. Click **Finish**.
8. Access the Wireless Manager application from the **Start** menu or the desktop shortcut .

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use the **Fn** + \key combination to toggle power to the 3.75G/HSPA module, and check the indicator to see if the module is powered on or not (see *Table*, on page 1 - 12 Table 1 - 3, on page 1 - 9).
Wireless Manager Application

The connection information is stored on the USIM card supplied by the service provider (where this is not the case you may need to create a profile - see “Creating a Profile” on page 7 - 73).

1. Power on the 3.75G/HSPA module using the Fn + key combination.
2. Access the Wireless Manager application from the Start menu (Start > All Programs > Wireless Manager > Wireless Manager) or the desktop shortcut .
3. You may be required to enter your PIN number and click OK.
4. Click the Connect button (a Profile needs to be selected, and in most cases this will be pre-configured).

PIN Number

The PIN number for your USIM card will be supplied by your service provider. You usually have a limited number of attempts to enter the correct PIN number.

If you fail to enter the PIN number correctly you will be blocked from accessing the USIM card and you will need a PUK (Personal Unblocking Key), supplied by your service provider, to unlock it.

Figure 7 - 47
Wireless Manager (Not connected)
5. The system will connect to your network.
6. **Connected** will appear above the timer icon (the timer will indicate your connected time for the current session).
7. You can then access the internet, download e-mail etc. as per any internet connection.

**Figure 7 - 48**
Wireless Manager (Connected)

---

**Wireless Manager Help**
To get help on **Wireless Manager** configuration and settings, click the **Help** icon or press **F1**.
8. Click the Wireless Manager notification area icon to view the connection status, or wireless icon to view the Mobile Broadband Connection status.

9. The indicator will display the signal strength and radio access technology.

10. To disconnect from the service provider, click the Disconnect button (note that if you click the close icon at the top right of the screen the application will minimize to the system tray, however the application will still be running; to exit the application right-click the notification area icon and click Disconnect or Exit Wireless Manager).

11. The program will disconnect from the service provider.

12. The module will still be on, and you will need to press the Fn + key combination to turn it off.

13. If you are unsuccessful in connecting this way you may need to add a profile with information provided by your service provider (see the following pages).
Profiles

1. Access the Wireless Manager application from the Start menu (Start > All Programs > Wireless Manager > Wireless Manager) or the desktop shortcut.
2. Click the Settings > Advanced.
3. Click the Profiles (tab).

Figure 7 - 50
Advanced Settings - Profiles
4. Multiple profiles may be available from the USIM card and the first time the application starts it may require you to select a profile (Set Profile) to use for your connection.

**Automatic Profile Selection**
If **Automatic selection** is chosen, then the application will search the operator profile database for a profile that matches the details on your USIM card. If a correct profile is found it will be automatically selected as your profile.

**Manual Profile Selection**
If Manual selection is chosen, then you can select a profile from the applications’s operator profile database, or you can create a new profile.
Selecting a Profile
1. Click Manual selection (button).
2. Click the Filter to view the drop-down list.
3. Select the Profile you wish to use and click Apply to confirm the selection.

Figure 7 - 52
Profile - Manual Selection (Filter)
Creating a Profile
1. Click Manual selection (button).
2. Click the New.
3. Enter a name you prefer for the profile.
4. Enter the Access Point Name (APN).
5. Enter the User Name and Password if required (some service providers may not require this information and the fields may then be left blank).
6. If your service provider requires IP address, DNS and Protocols to be entered, click the appropriate tab and enter the supplied information (otherwise leave blank).
7. Click Save to save the profile information.
8. The profile will be stored under User defined in the Filter drop-down list.

Deleting a Profile
To delete a profile click to select Manual selection and select the profile and click Delete.

Modifying a Profile
To modify a profile click to select Manual selection and select the profile and click Edit. Change the settings as required and then click Save (note that only user defined profiles may be edited).

Figure 7 - 53
New Profile IP, DNS & Protocols
Settings
The **Settings** tab allows you to adjust the application features. Click to put a tick in **Launch Wireless Manager at Windows startup** to launch the application at **Windows Startup**.

![Wireless Manager Settings](image)

**Figure 7 - 54**
**Settings**

The **Advanced** settings allow more detailed configuration. To access the **Advanced** settings:

1. Access the **Wireless Manager** program from the **Start** menu (**Start > All Programs > Wireless Manager > Wireless Manager**) or the desktop shortcut.
2. Click the **Settings > Advanced**.
3. Click the tab to edit any particular setting.
SIM
Most USIM cards are protected by a Personal Identity Number (PIN). You may turn on or off the Request PIN at startup (click Apply to save any changes). You can also Change PIN (you will need to enter the new PIN in the two fields provided and click Apply to save any changes).

Radio
Radio needs to be turned on before you can make any connection (note this is not the same as powering the module off/on using the Fn + key combination), but you may turn it off when required. Automatic mode is the recommended setting for most 3G networks as it will use 3G where available. All Frequency bands are selected as default (click Apply to save any changes).

PIN Notes
You will have to enter your current PIN to change the PIN settings.

Request PIN at startup will apply only after you have shut the computer down and restarted it (not just restarted).

Radio & Power Saving States
You can choose to have the radio turned on or off during Hibernate or Sleep power saving states.

Figure 7 - 55
Advanced Settings
SIM & Radio
Modules

Warning
Note that some applications automatically transmit data when connected, and you may be charged for the data transfer. Some auto connection/connection settings may lead to expensive roaming charges.

Networks
The mobile network list lists available networks at your location, and allows you to select a network which to connect. You must disconnect before being able to select a network.

Connection
You can set the Wireless Manager to automatically connect at Windows startup (however the module must be powered on, and radio must be turned on). You can also automatically connect when resuming from a power-saving state (click Apply to save any changes). Click Default to return to the original default settings.

Figure 7 - 56
Advanced Settings
Networks & Connection
Text Messaging Service (SMS)
In addition to standard internet services you may also send and receive SMS text messages using the Wireless Manager, if your service supports SMS.

SMS Utility
1. Access the Wireless Manager application from the Start menu (Start > All Programs > Wireless Manager > Wireless Manager) or the desktop shortcut.
2. Click SMS and the SMS Utility will then start.
3. The indicator in the upper right corner will display if radio is currently on or off (radio must be on in order to send/receive messages).
Messages
Click the **Messages** tab to access the tabs displaying text messages. The tabs at the top of the menu display the **Inbox, Drafts, Outbox, Sent and Trash** menus.

Text messages are automatically saved to your computer and may be sorted in ascending or descending order by name or date.

*Figure 7-58*  
**SMS Utility**  
**Messages**
Sending a Text Message

1. Access the Wireless Manager application from the Start menu (Start > All Programs > Wireless Manager > Wireless Manager) or the desktop shortcut.
2. Click SMS and the SMS Utility will then start.
3. Click the New Message tab.
4. Enter the phone number in the To field (multiple numbers may be entered separated by a semicolon (;), or click the phonebook icon to select a name from the phonebook.
5. Select any contact’s phone number and click OK (you can click a check box to select multiple contacts or more than one phone number for each contact).
6. Type the message body in the Message field (to a maximum of 160 characters).

Figure 7 - 59
SMS Utility - New Message
7. Click Send to send the message or Save to save the message in the Drafts folder.
8. Clicking the Clear icon clears both the Message and To fields.
9. If radio is on then the message will be sent, however if the radio is off the message will be stored in the Outbox.

Note that you do not have to connect to the network to Send/Receive SMS messages.

Inbox
Any received text messages will be displayed in the Inbox. The number of unread messages will be displayed in parenthesis in the inbox tab. Unread messages will be displayed in a darker color than the read messages, and incoming messages will be displayed briefly in the Notification Area.

Figure 7 - 60
SMS Utility - Inbox & New Message
Received Notification
Messages

- **Opening a text message**: Double-click the message and the message will open in a new window (to close it click the close icon in the top right of the message).

- **Previewing a text message**: Click the preview icon and the message preview will open. Click the icon again to close the preview.

- **Replying to a text message**: Double-click the message and click **Reply**. Type the reply in the message field and click **Send** to send the message (or **Save** to save it in **Drafts**).

- **Forwarding a text message**: Double-click the message and click **Forward**. Type the recipients name in the **To** field or click the icon to select recipients from the **phonebook**.

- **Deleting a text message**: Right-click the message select **Delete selected**. To delete all messages in the folder right-click any message and select **Delete All**. Holding down the **Ctrl key** and selecting messages allows you to multiple select messages for deletion (choose **Delete selected**). Deleted message will be sent to the Trash folder. To permanently delete messages right-click and select **Delete selected** or **Delete All** (or you may choose to **Recover/Recover All**) and click **Yes** to confirm.
Phonebook

The **Phonebook** allows you to view and edit all your frequently used contacts, and is divided into **Contacts** and **Groups**. To access the **Phonebook**:

1. Access the **Wireless Manager** application from the **Start** menu (**Start > All Programs > Wireless Manager > Wireless Manager**) or the desktop shortcut.
2. Click **SMS** and the **SMS Utility** will then start.
3. Click the **Phonebook** tab.

*Figure 7-62* SMS Utility - Phonebook (Contacts)
Contacts

- **New Contact**: Click the New contact button to create a contact. Add the name and at least one phone number (Mobile, Work, Home and Other fields are available) for the contact. Click the icon to expand the number details. Select Synchronize with SIM to synchronize the contact information with your USIM card. Click the Save icon to save the information.

- **Edit Contact**: Click the edit icon to make changes to a contact detail, and click save to confirm the changes.

- **Delete Contact**: Click the delete icon to delete a contact from the phonebook.

- **Send a message to a Contact**: Click the message icon to send a text message to any contact.

Figure 7 - 63
SMS Utility
New Contact

Import/Export
Contacts

Import/Export Contacts: Click the Import/Export buttons to import or export the list of contacts.
Groups
You can organize existing contacts into groups from the Groups tab.

- **New Group**: Click the New group button to create a group. Click the icon to expand the group details, and click a check box to add at least one phone number from the contacts for the group. Click the Save icon to save the information.

- **Edit Group**: Click the edit icon to make changes to a contact detail, and click save to confirm the changes, or close to exit without making changes.

- **Delete Group**: Click the delete icon to delete a group from the phonebook.

- **Send a message to a Group**: Click the message icon to send a text message to any group.
SMS Settings
The SMS Utility Settings tab allows you to adjust the SMS features.

The Advanced settings allows more detailed configuration. To access the Advanced settings:

1. Access the Wireless Manager application from the Start menu (Start > All Programs > Wireless Manager > Wireless Manager) or the desktop shortcut.
2. Click SMS and the SMS Utility will then start.
3. Click the Settings > Advanced.
4. Click the tab to edit any particular setting.

Figure 7 - 65
SMS Utility Settings

- **Message Length**: You can set the number of blocks that can be sent (up to a length of 10 blocks).
- **Message validity period**: This sets the period after which the message will be deleted from the SMS center and therefore not forwarded to the recipient(s) when they come online.
- **Display information messages**: You can choose whether to allow information messages to automatically appear on screen or not.
**Send**

Click **Delivery Report** to automatically request a reply from a recipient. If you click to **Send messages in Outbox automatically upon connection** then messages written when the radio is off, will then be sent automatically the next time radio is turned on. You can also choose to **Include original message in reply**.

**Notification**

This menu allows you to enable/disable **Show animation on new message** to get an animated notification of newly received messages. Enabling **Play sound on new message** will play an audio notification upon receipt of new messages.
Number
You can choose to Use default service center number or you can uncheck the box and add your number manually if your service provider supplies a different number (click Apply to save the change or Default to return to the default number).

Memory
Phonebook memory status displays the number of contacts displayed on the USIM card.
THX TruStudio Pro Audio

Install the THX TruStudio AP to allow you to configure the audio settings to your requirements for the best performance in games, music and movies.

THX TruStudio AP Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into the CD/DVD drive.
2. Click Option Drivers (button).
4. Choose the language you prefer and click Next.
5. Click Yes to accept the license.
6. Click Next.
7. Click Full Installation (button).
8. Click Next > Finish to restart the computer.

Note that THX TruStudio Pro will be disabled when you are connecting to an external display through an HDMI connection.
THX TruStudio Pro Activation

On the first run of THX TruStudio Pro you will need to **activate** the application.

1. To activate the application you will need to be connected to the internet.
2. Double-click the **THX Activate** icon on the desktop and click the **Activate** button.
3. The program will connect to the internet to verify the activation key.
4. Click **Finish** to complete the application activation.
5. Restart the computer after the process is complete.

**THX TruStudio Pro Application**

The application can be run from the shortcut in the **Start** menu (**Start > All Programs > Creative > THX TruStudio Pro Settings**).

- **Power On/Off**
- **Collapse/Expand View**

**THX Audio & HDMI**

- **Power On/Off**
- **Collapse/Expand View**

**Note that the THX audio effects do not apply to audio generated through an HDMI connection.**

**Fn + 5 Audio Toggle (Models C & D Only)**

- The **Fn + 5** key combination allows you to toggle the audio system between stereo and surround modes.
- **Note that if you press the key combination to switch to stereo mode then the THX TruStudio Pro will be disabled.**

**Figure 7-68**

THX TruStudio Pro Menu
**THX Control Panel**
Each control has an On/Off button to allow you to enable/disable the control, and most controls feature a slider to adjust the levels (the subwoofer may be turned on/off).

- **Surround**: Provides virtual sound channels to control the level of immersion.
- **Crystalizer**: Enhances audio to make it sound livelier.
- **Speaker**: Enhances the bass level of the sound system.
- **Smart Volume**: Minimizes sudden volume changes to avoid the need for constant adjustment.
- **Dialog Plus**: Enhances dialogue levels for movies etc.
THX TruStudio Pro Headphone Settings
THX TruStudio selects the **built-in speakers** by default and this setting may cause some sound quality issues when using headphones. To **adjust the settings for headphones** do the following:

1. Run the **THX TruStudio Pro** application.
2. Select **Settings** from the menu.
3. Select **Headphones** from the drop-down menu (you can adjust the slider for crossover frequency).
4. Click **OK** and close the application.
Modules

THX TruStudio Pro & HDMI
1. When you connect an HDMI display to the HDMI-Out port, the THX Tru Studio Pro controls will be disabled.
2. A warning box will pop-up and will prompt “Do you want to select another audio device now?”.
3. Click No to continue using the HDMI audio output from your external display (do not attempt to select another audio device when connected to the external HDMI display).

Figure 7 - 72
THX TruStudio Pro HDMI Display Warning
Intel® Rapid Storage Technology Driver

Install the **Intel® Rapid Storage Technology** to support your SATA drive if set up in **AHCI mode** in the BIOS (see “**SATA Mode (Advanced Menu)**” on page 5 - 10).

1. Insert the **Device Drivers & Utilities + User’s Manual** disc into the CD/DVD drive.
2. Click **Option Drivers** (button).
3. Click **8.Install IRST Driver > Yes**.
4. Click **Next > Yes > Next > Next**.
5. Click **Finish** to restart the computer (you will need to restart the system again after the computer has rebooted).
Chapter 8: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a power strip, make sure it is actually working. Check the LED Power Indicators (see “LED Indicators” on page 1 - 9) to see the computer’s power status.

- **Connections** - Check all the cables to make sure that there are no loose connections anywhere.

- **Power Savings** - Make sure that the system is not in Hibernate or Sleep mode by pressing the keys configured in your Power Options (see “Configuring the Power Buttons” on page 3 - 8), the Fn + F4 key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the Fn + F8 and F9 keys to adjust the brightness (see Table 1 - 5, on page 1 - 13).

- **Display Choice** - Press Fn + F7 to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no optical media and/or USB storage devices in any connected drive when you start up your machine (this is a common cause of the message “Invalid system disk - Replace the disk, and then press any key” / “Remove disks or other media. Press any key to restart”).
Backup and General Maintenance

- Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

- Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Boot** password for the SCU (see “Security Menu” on page 5 - 11).

- Keep copies of vital **settings files** such as network, dialup settings, mail settings etc. (even if just brief notes).

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Troubleshooting

Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Bootable CD-ROM/DVD-ROM/USB storage device” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Troubleshooting

Upgrading and Adding New Hardware/Software

• Do not be tempted to make changes to your **Windows Registry** unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

• Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

• Read the **documentation**. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “**READ ME**” or “**READ ME FIRST**”.

• When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

• Make sure you have installed the **drivers** for any new hardware you have installed (latest **driver files** are usually available to download from vendor’s websites).

• Thoroughly check any **recent changes** you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.
Troubleshooting

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; **Example** - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.
# Troubleshooting

## Problems & Possible Solutions

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You turned the power on but it doesn’t work.</td>
<td><em>Battery missing / incorrectly installed.</em> Check the battery bay, make sure the battery is present and seated properly (the design of the battery only allows it to go in one way). Make sure there’s nothing interfering with the battery contacts.</td>
</tr>
<tr>
<td>The Battery LED power indicator is blinking orange.</td>
<td><em>Low Battery.</em> Plug in the AC power source. If the computer doesn’t start up immediately, turn it off then on again.</td>
</tr>
<tr>
<td>You are losing battery power too quickly.</td>
<td><em>The system is using too much power.</em> If your OS has a Power Options scheme (see “Power Plans” on page 3 - 4) check its settings. You may also be using a USB device/external device that is drawing a lot of power.</td>
</tr>
<tr>
<td>Actual battery operating time is shorter than expected.</td>
<td><em>The battery has not been fully discharged before being recharged.</em> Make sure the battery is fully discharged and recharge it completely before reusing (see “Battery Information” on page 3 - 11).</td>
</tr>
<tr>
<td></td>
<td>Check the settings of any active power plan (see “Power Plans” on page 3 - 4). A peripheral device/USB device is consuming a lot of power. Turn off/remove the unused device to save power.</td>
</tr>
<tr>
<td>Unwelcome numbers appear when typing.</td>
<td><em>If the LED is lit, then Num Lock is turned ON.</em> (see “LED Indicators” on page 1 - 9).</td>
</tr>
</tbody>

<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The computer feels too hot.</td>
<td>Make sure the computer is properly ventilated and the vents/fan intakes are not blocked. If this doesn’t cool it down, put the system into Hibernate mode or turn it off for an hour. Make sure the computer isn’t sitting on a thermal surface (see “Overheating” on page 1 - 18). Make sure you’re using the correct adapter. Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the vents/fan intakes to be blocked.</td>
</tr>
<tr>
<td>Nothing appears on screen.</td>
<td>The system is in a power saving mode. Toggle the Fn + F4 (see “Configuring the Power Buttons” on page 3 - 8). The screen controls need to be adjusted. Toggle the screen control Fn + F8/F9 key combinations. If you’re connected to an external monitor, make sure it’s plugged in and turned on. You should also check the monitor’s own brightness and contrast controls. The computer is set for a different display. Toggle the screen display key Fn + F7 combination. If an external monitor is connected, turn it on. The screen saver is activated. Press any key or touch the TouchPad.</td>
</tr>
<tr>
<td>No image appears on the external monitor I have plugged in and powered on.</td>
<td>You haven’t installed the video driver and configured it appropriately from the Control Panel. See “Video Driver Controls” on page C - 1 for instructions on installing and configuring the video driver.</td>
</tr>

</table>
| I cannot obtain high speed Bluetooth data transfer. | To obtain high speed Bluetooth data transfer take into account the following:  
- Only the combination Wireless LAN & Bluetooth module supports high speed (data transfer).  
- To achieve high speed transfer speeds, **both devices must support high speed data transfer** (i.e. both the computer and the Bluetooth compatible device you are connecting to).  
- To obtain high speed data transfer **make sure that both the computer’s WLAN and Bluetooth modules are powered on** (use the **Fn + F11** to toggle power to the WLAN module and **Fn + F12** to toggle power to the Bluetooth module).  
- Check your Bluetooth compatible device’s documentation to confirm it supports high speed data transfer, and for configuration information. |
Troubleshooting

Bluetooth Connection Problems

If you are experiencing problems connecting to some Bluetooth devices (in particular certain mobile phones and headsets) it maybe necessary to download and install the Windows Mobile Device Center software (for Windows Vista and Windows 7). Go to the Microsoft website and search for the Microsoft Windows Device Center Driver for Windows Vista (64-bit or 32-bit) and Windows 7 (64-bit or 32-bit), and then download the driver.

1. Install the [Microsoft Windows Device Center Driver](https://www.microsoft.com) as appropriate for your operating system.
2. Windows Vista will automatically configure the driver for you, however Windows 7 requires further configuration.
3. Make sure the Bluetooth device is powered on.
4. Go the Windows 7 control panel and double-click **Device Manager (Hardware and Sound > Devices and Printers)**.
5. Bluetooth Peripheral Device(s) will be listed under **Other Devices** (note this will only be listed if you have connected, or tried to connect to, a Bluetooth device previously).

![Device Manager](image)

**Figure 8 - 1 - Device Manager**
Troubleshooting

6. Right-click Bluetooth Peripheral Device and click on **Update Driver Software**.
7. Click **Browse my computer for driver software**.
8. Click **Let Me pick from a list of device drivers on my computer**.

**Figure 8 - 2** - Browse my computer.../Let me pick from...

9. Select **Bluetooth Radios** from the list.

**Figure 8 - 3** - Select Bluetooth Radios

8 - 16 Bluetooth Connection Problems
10. A list of drivers will appear with Manufacturer on one side and Model in the other.

11. Choose Microsoft Corporation (make sure you choose the full name Microsoft Corporation and do not choose Microsoft - Note that you must have installed the Microsoft Windows Device Center Driver for Microsoft Corporation to appear in the list).

12. Select Windows Mobile-based device support from the Model list.

13. Click Next > Yes and the driver will install.

14. Click Close to complete the installation.
Troubleshooting

15. The Device Manager should now display the **Windows Mobile-based device support** under **Bluetooth Radios**.

16. You will need to repeat the process for any other **Bluetooth Peripheral Devices** listed under **Other Devices**.

![Figure 8 - 5 - Device Manager - Bluetooth Radio](image-url)
Intel® WLAN & Bluetooth HS Combo Modules

Note that, at the time of going to press, Intel® Centrino® Wireless-N 2230 and Intel® Centrino Advanced 6235 WLAN & Bluetooth combo modules use the standard Bluetooth configuration in Windows 7 (see “Intel Bluetooth Combo Driver Installation” on page 7 - 58). Do not use the Bluetooth & WLAN Combo settings information outlined from page 7 - 51 to page 7 - 57.
Appendix A: Interface (Ports & Jacks)

Overview
The following chapter will give a quick description of the ports & jacks which allow your computer to communicate with external devices, connect to the internet etc.
## Interface (Ports & Jacks)

### Ports and Jacks

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Card Reader</td>
<td>The card reader allows you to use the following digital storage cards: [MMC (MultiMedia Card) / RSMMC] [SD (Secure Digital) / Mini SD / SDHC / SDXC] [MS (Memory Stick) / MS Pro / MS Duo] Push the card into the slot and it will appear as a removable device.</td>
</tr>
<tr>
<td>DC-In Jack</td>
<td>Plug the supplied AC/DC adapter into this jack to power your computer.</td>
</tr>
<tr>
<td>DVI-Out Port</td>
<td>The DVI-Out (Digital Visual Interface) Port is a video connector interface. This allows you to connect an external monitor, TV or Flat Panel Display etc. as a display device (see “Display Devices &amp; Options” on page C - 7) by means of a DVI cable. If you are using an older type of monitor you will need to use a converter to convert the signal from DVI to VGA.</td>
</tr>
<tr>
<td>e-SATA / USB 3.0</td>
<td>This e-SATA (external Serial Advanced Technology Attachment) port allows you to plug-in external Serial ATA hard drives. This port also serves as a USB 3.0 port.</td>
</tr>
</tbody>
</table>
### Interface (Ports & Jacks)

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HDMI-Out Port</strong></td>
<td>The HDMI-Out (<a href="https://en.wikipedia.org/wiki/High-Definition_Multimedia_Interface">High-Definition Multimedia Interface</a>) port is an audio/video connector interface for transmitting uncompressed digital streams. This allows you to connect an external monitor, TV or Flat Panel Display etc. as a display device (see “Attaching Other Displays” on page C - 8) by means of a HDMI cable. <strong>Note</strong> that HDMI carries both audio and video signals (see “HDMI Audio Configuration” on page C - 22).</td>
</tr>
<tr>
<td><strong>Headphone-Out Jack</strong></td>
<td><strong>Headphones</strong> or <strong>speakers</strong> may be connected through this jack. <strong>Note</strong>: Set your system’s volume to a reduced level before connecting to this jack.</td>
</tr>
<tr>
<td><strong>Microphone-In Jack</strong></td>
<td>Plug an external microphone in to this jack to record on your computer.</td>
</tr>
<tr>
<td><strong>RJ-45 LAN Jack</strong></td>
<td>This port supports LAN (Network) functions. <strong>Note</strong>: Broadband (e.g. ADSL) modems usually connect to the LAN port.</td>
</tr>
<tr>
<td><strong>S/PDIF-Out Jack</strong></td>
<td>This S/PDIF (<a href="https://en.wikipedia.org/wiki/Sony%E2%80%93Philips_Digital_Interface_Format">Sony/Philips Digital Interface Format</a>) Out Port allows you to connect your DVD-capable PC to a Dolby AC-3 compatible receiver for “5.1” or ‘dts’ surround sound.</td>
</tr>
<tr>
<td><strong>Security Lock Slot</strong></td>
<td>To prevent possible theft, a Kensington-type lock can be attached to this slot. Locks can be purchased at any computer store.</td>
</tr>

<tr>
<td>USB 2.0/1.1 Ports</td>
<td>These USB (Universal Serial Bus) 2.0 compatible ports (USB 2.0 is fully USB 1.1 compliant) are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device). The USB 3.0 ports are denoted by their blue color; USB 2.0 ports are colored black. USB 3.0 will transfer data much faster than USB 2.0, and is backwards-compatible with USB 2.0. Note that USB 3.0 ports require a driver installation (see “USB 3.0” on page 4-7), does not support wake on USB and is not operational under DOS.</td>
</tr>

Appendix B: Control Center

Overview

The following chapter will give a quick description of the functions of the Control Center. The Control Center gives quick access to frequently used controls, power management features and enables you to quickly turn modules on/off. Click the Control Center icons to toggle the appropriate function, or hold the mouse button down and move the slider where applicable. Certain functions will automatically be adjusted when a power mode is selected.

![Figure B - 1 - Control Center](image-url)
Control Center

Power Modes
You can set a **Power Mode** by clicking the appropriate icon at the top of the **Control Center**. Each power mode will affect the power status of modules (e.g. WLAN, Bluetooth, 3G or Camera), screen brightness, TouchPad power and Silent Mode.

You can click a **Control Center** icon to set an overall power mode and then click individual icons in the **Control Center** to power on/off any modules etc.

The **table overleaf** illustrates the basic settings for each power mode. If you choose user defined the settings will correspond to your selected system settings.

**Table B - 1 - Power Modes**
Control Center

**Power Status**
The **Power Status** icon will show whether you are currently powered by the battery, or by the AC/DC adapter plugged in to a working power outlet. The power status bar will show the current battery charge state.

**Brightness**
The **Brightness** icon will show the current screen brightness level. You can use the slider to adjust the screen brightness or the **Fn + F8/F9** key combinations, or use the **Fn+ F2** key combination to turn off the LED backlight (press any key to turn it on again). Note that screen brightness is also affected by the **Power Mode** selected (see *Table B - 1, on page B - 3*).

**Volume**
The **Volume** icon will show the current volume level. You can use the slider to adjust the Volume or the **Fn + F5/F6** key combinations, or use the **Fn+ F3** key combination to mute the volume.

**Power Conservation**
This system supports **Energy Star** power management features that place computers (CPU, hard drive, etc.) into a low-power sleep modes after a designated period of inactivity (see “**Power Conservation Modes**” on page 3 - 10). Click either the **Performance, Balanced** or **Energy Star** button. Click in a blank area of the icon or press a key on the keyboard to exit **Power Conservation Mode** without making any changes.
Sleep
Click the Sleep button to bring up the Hibernate or Sleep buttons, and click either button to have the computer enter the appropriate power-saving mode (see “Power-Saving States” on page 3 - 6). Click in a blank area of the icon or press a key on the keyboard to exit Power Conservation Mode without making any changes.

Display Switch
Click the Display Switch button to access the menu (or use the + P key combination) and select the appropriate attached display mode (see page C - 13).

Time Zone
Clicking the Time Zone button will access the Date and Time Windows control panel.

Desktop Background
Clicking the Desktop Background button will allow you to change the desktop background picture.

TouchPad/PC Camera/Wireless LAN Module /Bluetooth/3.75G Module
Click any of these buttons to toggle the TouchPad or module’s power status. A crossed out icon will appear over the top left of the icon when it is off. Note that the power status of a module, and TouchPad power, is also effected by the Power Mode selected (see Table B - 1, on page B - 3). The 3.75G Module is an option for Model A only.

Caps Lock/Scroll Lock/ Number Lock
Click the button to toggle the appropriate lock mode.
Appendix C: Video Driver Controls

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 21.

Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 3. Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button).

Video (VGA)
1. Click 2.Install VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

NVIDIA Video (VGA)
1. Click 3.Install nVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click the RESTART NOW button to restart the computer.
NVIDIA® Optimus™ Technology

Most notebook computers come with either a discrete or integrated graphics solution.

**Discrete** graphics solutions feature a dedicated Graphics Processing Unit (GPU) which are capable of playing games, watching HD video or running GPU-based applications. However computers with discrete graphics solutions tend to be heavy in power consumption, and slightly larger in size in order to incorporate the dedicated discrete GPU.

**Integrated** graphics solutions usually feature memory sharing technology to help save power consumption and allow for longer battery life. However computers with integrated graphics solutions will not usually run games, HD video or GPU-based applications without severe limitations.

Nvidia® Optimus™ technology is a seamless technology designed to get best performance from the graphics system while allowing longer battery life, without having to manually change settings. Thus when an application is run that requires extra performance or quality, then the system will run the discrete GPU (dGPU); when the system does not require such enhanced performance it will let the integrated (iGPU) handle it.
How Optimus Technology works
When the system is powered up and is displaying just the desktop, the dGPU will be powered off. In this case the system is running in the same way as a system without a discrete graphics solution. However when an application that requires use of the dGPU is run (e.g, a game or HD Video), the dGPU is powered on and takes over the processing duties. If the program is closed, then the dGPU will be powered back down again until required.

UMA Mode & Performance

UMA Mode is designed for maximum power saving, however this does have an affect on the system's overall video performance (as it is based on the Power saver power plan).

If you require better video performance then it is recommended that you use Optimus Mode. Alternatively you may switch the UMA Mode power plan to Balanced (however power savings will be reduced in this case).

Note that when the power plan is set to UMA Mode the GPU LED indicators may no longer display the correct status.
**Video Driver Controls**

**GPU Button**
This computer also features a button that allows the user to switch between Optimus Mode and UMA Mode (Unified Memory Architecture). UMA Mode will use only the integrated GPU; Optimus Mode will allow the system to automatically determine whether the dGPU or iGPU is used. Thus the user can completely control how the graphics system operates. Press the GPU button, and the button color will indicate the current mode.

Intel® Graphics & Media Control Panel

Advanced video configuration options are provided by the Intel® Graphics and Media Control Panel. To access the control panel:

1. Click Advanced settings in the Screen Resolution control panel in Windows.
2. Click the Intel(R)... tab and click Graphics Properties (button).
OR
3. Right-click the desktop and select Graphics Properties from the menu.
OR
4. Double-click the Intel(R) G&M control panel in Windows.
5. Choose the application mode (Basic, Advanced or Wizard) required (see sidebar).

Application Mode
Note that all figures pictured, and instructions outlined here are based on the Advanced Application Mode.

Figure C - 1
Intel® G&M Control Panel
You may make changes to any of the graphics properties by clicking the appropriate menu tab on the left of the menu and adjusting the settings on the right.

**Options & Support**

Click **Options & Support** and select an item from the sub-menu to bring up the help and support topics.

You will need to be connected to the Internet to access the key resource links.

**Multiple Display**

At least one other display must be attached in order to view multiple display selection options.

*Figure C - 2*

Intel® G&M Control Panel Tabs
Display Devices & Options

Note that you can use an external display connected to the HDMI-Out port or external monitor port. See your display device manual to see which formats are supported.

Attaching Displays

When you first attach an external display you may find that the desktop does not occupy the full screen area. Use either the display’s auto adjust/configure controls, or the Intel(R) G&M control panel to configure the full screen display.

<table>
<thead>
<tr>
<th>Intel Display Mode</th>
<th>Description</th>
</tr>

<td>Both connected displays are treated as separate devices, and act as a virtual desktop</td>
</tr>
</tbody>
</table>

Table C - 3
Display Modes

Function Key Combination

You can use the **Fn + F7** key combination to toggle through the display options:

- Notebook Only
- External Display Only
- Notebook + External Display

Make sure you give the displays enough time to refresh.

Note that HDMI supports video and audio signals.
Attaching Other Displays

If you prefer to use a monitor or flat panel display, connect it to the external monitor port or HDMI-Out port on the left of the computer.

To Clone Displays:
1. Attach your display to the external monitor port or HDMI-Out port, and turn it on.
2. Go to the Intel(R) G&M control panel and click Display > Multiple Displays.
3. Click Operating Mode and select Clone Displays from the menu.
4. Click Apply, and OK to confirm the settings change.
5. You can switch the Primary/Secondary Display from the menu.

At least one other display must be attached in order to view Multiple Display selection options.

General Settings

Click General Settings to access settings the options for any attached display.

Figure C - 3
Display > Multiple Displays (Clone)
To Enable Extended Desktop:
1. Attach your display to the external monitor port or HDMI-Out port, and turn it on.
2. Go to the Intel(R) G&M control panel and click Display > Multiple Displays.
3. Click Operating Mode and select Extended Desktop from the menu.
4. Click Apply, and OK to confirm the settings change.

Click the appropriate monitor icon and drag it to match the physical arrangement you wish to use (e.g. the secondary display may be extended left/right/above/below the primary display).

Click General Settings to make any adjustments required.

Display Settings
Extended Desktop
You can have different Colors, Screen Area and Monitor Refresh Rates for each display device provided your monitor can support them.

You can drag the monitor icons to match the physical layout of your displays. Icons and programs may also be dragged between the displays.
Video Driver Controls

Display Profiles
You can save display settings to be loaded at any time.

1. Go to the Intel(R) G&M control panel and click Display.
2. Configure the General Settings, Multiple Displays, Color Enhancement, Custom Resolution & Monitor/TV Settings to your preferences.
3. Click Apply, and OK to confirm the settings change.
4. Click the Save button at the top of the General Settings, Multiple Displays or Color Enhancement menus (under Display Profiles).
5. Type a name for the Profile and click OK.
6. The Profile will be listed under Display Profiles.
7. Select the profile from the pull-down menu and click Apply, and OK to confirm the settings change.

Figure C - 5
Intel® G&M Profiles

C - 10 Attaching Other Displays
Configuring an External Display in Windows 7

You can also use the Screen Resolution control panel in Windows 7 to configure an external display.

1. Attach your display to the external monitor port or HDMI-Out port, and turn it on.
2. Go to the Screen resolution control panel (see page 1 - 22).
3. Click the Detect button.
4. The computer will then detect any attached displays.

Figure C - 6
Screen Resolution
Multiple Displays
(Win 7)
5. You can configure the displays from the **Multiple Displays** menu.

- **Duplicate these displays** - Shows an exact copy of the main display desktop on the other display(s)
- **Extend these displays** - Treats both connected displays as **separate** devices
- **Show desktop only on 1/2** - Only one of your displays is used.

*Figure C - 7
Screen Resolution
Multiple Display Options (Win 7)*
Using the Windows Logo Key + P Key Combination to Switch Displays
You can also use the + P key combination to quickly change display configuration and modes (this is particularly useful when attaching a projector) in Windows 7.

1. Attach your display to the external monitor port or HDMI-Out port, and turn it on.
2. Press the + P key combination.
3. An on-screen menu will pop up.
4. Use the cursor keys (or + P) to select the appropriate configuration from the menu, and press Enter to confirm the selection.

Figure C - 8
+ P Display Configuration Selection
(Win 7)
NVIDIA Control Panel

More advanced video configuration options are provided in the NVIDIA Control Panel tab.

1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Double-click NVIDIA Control Panel (click "Classic View" from the left of the menu if you are in Control Panel Home).
The NVIDIA Control Panel provides additional video configuration controls and tools which allow quick access to features such as image settings, 3D Settings and video configuration.

Navigating the Control Panel

Navigate through the control panels in much the same way as you would a web page. Click on the sub-heading tasks in the left menu (and on the highlighted links) for information. Use the buttons on the top left to go back, forward etc.

Figure C - 10
NVIDIA Control Panel
Optimus™ Customization Options

One of the most important aspects of Nvidia® Optimus™ technology is that it will switch between the integrated GPU and discrete GPU seamlessly and automatically, and does not require any input from the user. However, customization options are offered for users who prefer to set their own parameters for GPU usage.

Context Menu

One of the quickest ways to choose which GPU to use for a particular application is by using the “Run with graphics processor” in the context menu.

1. Go to the NVIDIA Control Panel (see page C - 14).
2. Click Desktop from the top menu and select Add “Run with graphics processor” to Context Menu (it should have a tick alongside it).

Display GPU Activity Icon

Click to enable Display GPU Activity Icon in the Notification Area to quickly access the GPU Activity monitor from the taskbar.

Figure C - 11
NVIDIA Control Panel - View
3. Close the NVIDIA Control Panel.
4. Find the executable file icon of the application you want to run.
5. Right-click the icon and select Run with graphics processor from the context menu.
6. Select either High-performance NVIDIA processor (dGPU) or Integrated graphics (iGPU) to run the program with the selected GPU.

Note: The NVIDIA control panel refers to High-performance NVIDIA processor (which is the discrete GPU) and Integrated graphics (which is the integrated GPU).
Global Settings
Global settings allows you to set the preferred graphics processor for overall use. Ideally this would be the iGPU for battery life, but this can be set to the dGPU if preferred.

1. Run the NVIDIA Control Panel (see page C - 14).
2. Click Manage 3D Settings (3D Settings) and select Global Settings (tab).
3. Select either Integrated graphics (iGPU) or High performance NVIDIA Processor (dGPU) from the drop-down menu.
4. Click the Setting menu items to select any options required.
5. Click Apply to save the settings.

Figure C - 13
Global Settings
Program Settings
Program settings allows you to make specific adjustments for installed applications.

1. Run the NVIDIA Control Panel (see page C - 14).
2. Click Manage 3D Settings (3D Settings) and select Program Settings (tab).
3. Select a program to customize from the drop-down menu, or click Add to add any program that does not appear in the menu.
4. Select the preferred graphics processor for the program from the drop-down menu.
5. Click the Setting menu items to select any options required.
6. Click Apply to save the settings.

Figure C - 14
Program Settings
Set PhysX® Configuration

NVIDIA® PhysX® is a physics engine that can use the GPU to accelerate game and 3D application performance. You can select the GeForce video card or CPU as a PhysX® processor, or configure the computer to auto-select a PhysX® processor (recommended default setting).

1. Go to NVIDIA Control Panel (see page C - 14).
2. Click Set PhysX configuration.
3. Click to Select a PhysX processor from the menu; Auto-select (recommended) is the default setting.
4. Click Apply to save the settings.

Figure C - 15
Set PhysX® Configuration
Video Settings

Click the sub-menus under Video to adjust the video color or image settings.

Figure C - 16
Video Settings
HDMI Audio Configuration

HDMI (High-Definition Multimedia Interface) carries both audio and video signals. In some cases it will be necessary to go to the Sound control panel and manually configure the HDMI audio output as per the instructions below.

1. Click Start, and click Control Panel (or point to Settings and click Control Panel).
2. Click Sound (Hardware and Sound) and click Playback (tab).
3. Depending on your display, the playback device may be selected, however in some cases you may need to select the audio device and click Set Default (button).
4. Double-click the device to access the control panel tabs illustrated overleaf.

Figure C - 17
Sound - HDMI Device (set Default)
5. Double-click the connected HDMI device (or right-click and select **Properties**) to adjust the HDMI settings from the control panel tabs.
6. Click **OK** to close the control panel (see notes overleaf).

![Figure C - 18](image)

**HDMI Device Properties**
Video Driver Controls

HDMI Notes
- Connect a device with HDMI support to the HDMI-Out port BEFORE attempting to play audio/video sources through the device.
- To play audio sources through your external display’s (TV or LCD) speakers you will need to go to the audio configuration control panel on the display and configure the audio input accordingly (see your display device manual).

HDMI Video Configuration
1. Connect an HDMI cable from the HDMI-Out port to your external display.
2. Configure your external display as per the instructions in “Attaching Other Displays” on page C - 8.
3. Set up your external display (TV or LCD) for HDMI input (see your display device manual).
4. You can now play video/audio sources through your external display.

THX TruStudio Pro & HDMI
1. When you connect an HDMI display to the HDMI-Out port, the THX TruStudio Pro controls will be disabled.
2. A warning box will pop-up and will prompt “Do you want to select another audio device now?“.
3. Click No to continue using the HDMI audio output from your external display (do not attempt to select another audio device when connected to the external HDMI display).

Other Applications
If you are using a third party application to play DVDs etc. from any attached DVD device, you will need to consult the application’s documentation to see the appropriate audio configuration (the application must support digital to analog translation).
Appendix D: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer’s release schedule. Check with your service center for details.

## Specifications

### Video Adapter Options

**Intel® Integrated GPU and NVIDIA® GeForce Video:**
- **Supports NVIDIA® Optimus Switchable GPU Technology between iGPU and dGPU**
- **Intel® HD Graphics 4000 / Intel® HD Graphics 3000 (GPU Type Depends on Processor)**
  - Dynamic Frequency
  - Intel® Dynamic Video Memory Technology Supporting Shared Memory up to 1.7GB
- **nVIDIA® GeForce GT 650M PCIe * 8 Video Card**
  - 1GB GDDR5 Video RAM On Board
  - Supports Microsoft DirectX® 11.0
  - HDMI 1.4a
  - NVIDIA PhysX™
  - GeForce CUDA™ Technology
  - NVIDIA® Optimus™ 2012 Technology

### Storage

- **One 12.7 mm Super Multi/Blu-Ray Combo/Blu-Ray Writer SATA Optical Device Drive (Factory Option)**
- **Two Changeable 2.5" 9.5 mm (h) SATA (Serial) Hard Disks**

### BIOS

- **One 48Mb SPI Flash ROM AMI BIOS**

### Audio

- **High Definition Audio**
- **S/PDIF Digital Output**
- **Built-In Microphone**
- **2 Built-In Speakers**
- **THX TruStudio Pro**

### Keyboard & Pointing Device

- **Full Size Winkey Keyboard with Numeric Keypad**
- **Built-In TouchPad (with Multi Gesture Functionality)**
- **Three Instant Buttons; WLAN On/Off, Mute, Camera On/Off**
- **GPU Mode Button (UMA/Optimus Mode)**

### Interface

- **One USB 2.0 Port**
- **Three USB 3.0 Ports**
- **One eSATA Port (SATA/USB 3.0 Combo)**
- **One External Monitor Port**
- **One 1.4a HDMI-Out (High-Definition Multimedia Interface) Port (with HDCP)**
- **One Microphone-In Jack**
- **One Headphone/Speaker-Out Jack**
- **One S/PDIF Out Jack**
- **One RJ-45 LAN Jack**
- **One DC-In Jack**
## Specifications

### Slots

- **Two Mini-Card Slots:**
  - **Slot 1** for WLAN or WLAN & Bluetooth Combo Half Mini-Card Module with PCIe and USB Interface
  - **Slot 2 for Model A Only:** for 3.75G Module with USB Interface *(Factory Option)*

### Card Reader

- Embedded Multi-In-1 Push-Push Card Reader
  - MMC / RSMMC
  - SD / Mini SD / SDHC / SDXC
  - MS / MS Pro / MS Duo

*Note:* Some of these cards require PC adapters that are usually supplied with the cards.

### Communication

#### Built-In 10/100/1000Mb Base-TX Ethernet LAN

- **Intel® Centrino Ultimate-N 6300 3*3** (802.11 a/g/n) Half Mini-Card PCIe WLAN Module *(Factory Option)*

#### Intel® Centrino Advanced-N 6235 2*2 (802.11 a/g/n) Half Mini-Card PCIe WLAN + Bluetooth V4.0+HS Combo Module *(Factory Option)*

- **Intel® Centrino® Wireless-N 2230 2*2** (802.11 b/g/n) Half Mini-Card PCIe WLAN + Bluetooth V4.0+HS Combo Module *(Factory Option)*

- **Intel® Centrino® Wireless-N 105** *(1*1 802.11 b/g/n+) Half Mini-Card PCIe WLAN Module *(Factory Option)*

- **UMTS/HSPA-based 3.75G Module** with USB Half Mini-Card Interface *(Factory Option for Model A Computers)*

- Quad-band GSM/GPRS (850 MHz, 900 MHz, 1800 MHz, 1900 MHz)

- UMTS WCDMA FDD (2100 MHz)

*Note that UMTS modes CAN NOT be used in North America*

### Security

- Security (Kensington® Type) Lock Slot
- BIOS Password
- **For Model A Only:** Fingerprint Reader Module *(Factory Option)*

### Features

- MOFA II (Magic Of Film Art) Changeable LCD Back Covers *(Some Model A Computers Only)*
- IMR (Injected Molded Resin) LCD Back Covers *(Some Model A Computers Only)*
- Painted Style *(Some Model B Computers Only)*
Specifications

### Power Management
- Supports Wake on LAN
- Supports Wake on USB

### Power
- Full Range AC/DC Adapter – AC in 100 - 240V, 50 - 60Hz DC Output 19V, 6.3A (120 Watts)
- Removable 6 Cell Smart Lithium Ion Battery Pack 48.84WH
- Removable 6 Cell Smart Lithium Ion Battery Pack 62.16WH (Factory Option)

### Environmental Spec
- **Temperature**
  - Operating: 5°C - 35°C
  - Non-Operating: -20°C - 60°C
- **Relative Humidity**
  - Operating: 20% - 80%
  - Non-Operating: 10% - 90%

### Physical Dimensions & Weight
- **Model A (Design Style I):**
  - 374mm (w) * 250mm (d) * 16.3 - 39.4mm (h)
  - 2.7kg with ODD and Battery
- **Model A (Design Style II):**
  - 374mm (w) * 250mm (d) * 16.3 - 41.4mm (h)
  - 2.8kg with ODD and Battery
- **Model B:**
  - 413mm (w) * 277.5mm (d) * 17.1 - 41.5mm (h)
  - 3.2kg with ODD and Battery
