Preface

R&TTE Directive

This device is in compliance with the essential requirements and other relevant provisions of the R&TTE Directive 1999/5/EC.

This device will be sold in the following EEA countries: Austria, Italy, Belgium, Liechtenstein, Denmark, Luxembourg, Finland, Netherlands, France, Norway, Germany, Portugal, Greece, Spain, Iceland, Sweden, Ireland, United Kingdom, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Slovakia, Poland, Slovenia.

ErP Off Mode Power Consumption Statement:

The figures below note the power consumption of this computer in compliance with European Commission (EC) regulations on power consumption in off mode:

- Off Mode < 0.5W
CE Marking

This device has been tested to and conforms to the regulatory requirements of the European Union and has attained CE Marking. The CE Mark is a conformity marking consisting of the letters “CE”. The CE Mark applies to products regulated by certain European health, safety and environmental protection legislation. The CE Mark is obligatory for products it applies to: the manufacturer affixes the marking in order to be allowed to sell his product in the European market.

This product conforms to the essential requirements of the R&TTE directive 1999/5/EC in order to attain CE Marking. A notified body has determined that this device has properly demonstrated that the requirements of the directive have been met and has issued a favorable certificate of expert opinion. As such the device will bear the notified body number 0560 after the CE mark.

The CE Marking is not a quality mark. Foremost, it refers to the safety rather than to the quality of a product. Secondly, CE Marking is mandatory for the product it applies to, whereas most quality markings are voluntary.
FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Re orient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the service representative or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

**Warning**

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit according to the model's requirements:

   • Full Range AC/DC Adapter - AC Input 100 - 240V, 50 - 60Hz, DC Output 19V/7.89A (150W) minimum.
   OR
   • Full Range AC/DC Adapter - AC Input 100 - 240V, 50 - 60Hz, DC Output 19.5V, 9.23A (180W) minimum.

This Computer's Optical Device is a Laser Class 1 Product
Instructions for Care and Operation
The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don’t drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

   - Do not expose the computer to any shock or vibration.
   - Do not place it on an unstable surface.
   - Do not place anything heavy on the computer.

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

   - Do not expose it to excessive heat or direct sunlight.
   - Do not leave it in a place where foreign matter or moisture may affect the system.
   - Don’t use or store the computer in a humid environment.
   - Do not place the computer on any surface that will block the Vents/Fan Intakes.
3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

   | Do not turn off the power until you properly shut down all programs. |
   | Do not turn off any peripheral devices when the computer is on. |
   | Do not disassemble the computer by yourself. |
   | Perform routine maintenance on your computer. |

5. **Take care when using peripheral devices.**

   | Use only approved brands of peripherals. |
   | Unplug the power cord before attaching peripheral devices. |
Servicing

Do not attempt to service the computer yourself. Doing so may violate your warranty and may expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

- When the power cord or AC/DC adapter is damaged or frayed.
- If the computer has been exposed to rain or other liquids.
- If the computer does not work normally when you follow the operating instructions.
- If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
- If there is an unusual odor, heat or smoke coming from your computer.

Bottom Cover Removal Warning

Users should not remove any cover(s) and /or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

Removal Warning

When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before restoring power to the system.

Also note the following when the cover is removed:
- Hazardous moving parts.
- Keep away from moving fan blades.
Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

---

Do not plug in the power cord if you are wet.

Do not use the power cord if it is broken.

Do not place heavy objects on the power cord.
Polymer Battery Precautions
Note the following information which is specific to polymer batteries only, and where applicable, this overrides the general battery precaution information overleaf.

- Polymer batteries may experience a slight expansion or swelling, however this is part of the battery’s safety mechanism and is not a cause for concern.
- Use proper handling procedures when using polymer batteries. Do not use polymer batteries in high ambient temperature environments, and do not store unused batteries for extended periods.

See also the general battery precautionary information overleaf for further information.
General Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not remove any batteries from the computer while it is powered on.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- If you do not use the battery for an extended period, then remove the battery from the computer for storage.
- Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth. Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Cleaning Instructions
(For Computer Models Supplied with Light Blue Cleaning Cloth)
Some computer models in this series come supplied with a light blue cleaning cloth. To clean the computer case with this cloth follow the instructions below:

1. Power off the computer and peripherals.
2. Disconnect the AC/DC adapter from the computer.
3. Use a little water to dampen the cloth slightly.
4. Clean the computer case with the cloth.
5. Dry the computer with a dry cloth, or allow it time to dry before turning on.
6. Reconnect the AC/DC adapter and turn the computer on.
Preface

Travel Considerations
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it’s latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vents/Fan Intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intakes while the computer is in use.
On the Road

In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

**Hand-carry the notebook** - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

**Beware of Electromagnetic fields** - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). **Note:** Some airports also scan luggage with these devices.

**Fly safely** - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

**Get power where you can** - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

**Keep it dry** - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

Remember to:
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Lighting
Proper lighting and a comfortable viewing angle can reduce eye strain and shoulder and neck muscle fatigue.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

LCD Screen Care
To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

- Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
- Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
- Rotate desktop background images every few days.
- Turn the monitor off when the system is not in use.

LCD Electro-Plated Logos
Note that in computers featuring a raised LCD electro-plated logo, the logo is covered by a protective adhesive. Due to general wear and tear, this adhesive may deteriorate over time and the exposed logo may develop sharp edges. Be careful when handling the computer in this case, and avoid touching the raised LCD electro-plated logo. Avoid placing any other items in the carrying bag which may rub against the top of the computer during transport. If any such wear and tear develops contact your distributor/supplier.

Preface

XXX
Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

• Chapter 2  A guide to using some of the main features of the computer e.g. the storage devices (hard disk, optical device, Multi-in-1 card reader), TouchPad & Mouse & Audio.
• Chapter 3  The computer’s power saving options.
• Chapter 4  The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
• Chapter 5  An outline of the computer’s built-in software or BIOS (Basic Input Output System).
• Chapter 7  A quick guide to the computer’s PC Camera, Wireless LAN, Combo Bluetooth & WLAN, TPM (security), Intel and 3G/4G modules (some of which may be optional depending on your purchase configuration).
• Chapter 7  A troubleshooting guide.
• Appendix A  Definitions of the interface, ports/jacks which allow your computer to communicate with external devices.
• Appendix B  Information on Control Center.
• Appendix C  Information on the Video driver controls.
• Appendix D  The computer’s specification.
Quick Start Guide

Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1 and “BIOS Utilities” on page 5 - 1 in the remainder of the User’s Manual. You may also find the notes marked with a  of interest to you.

Beginners and Non-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in the Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a  as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the ☢ symbol. Also please note the safety and handling instructions as indicated in the Preface.
Not Included
Operating Systems (e.g. Windows 10) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in “Drivers & Utilities” on page 4 - 1. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you); refer to Chapter 4 for installation instructions.

Ports and Jacks
See “Interface (Ports & Jacks)” on page A - 1 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.

Model Differences
This notebook series includes two different models that vary slightly in design. Note that though your computer may look slightly different from that pictured throughout this manual, all ports, jacks (other than those indicated in the specification) and general functions are the same for all the design styles (see Appendix D for further details).
Quick Start Guide

System Startup

1. Remove all packing materials, and place the computer on a stable surface.
2. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
3. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   - Attach the AC/DC adapter cord to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and **leave it there for 6 seconds or longer**.
   - Remove the adapter cord from the computer's DC-In jack, and then plug it back in again; the battery will now be unlocked.
4. Use one hand to raise the lid/LCD to a comfortable viewing angle (**do not exceed 130 degrees**); use the other hand to support the base of the computer (**Note: Never** lift the computer by the lid/LCD).

**Shutdown**

Note that you should always shut your computer down by choosing the **Shut Down** command in **Windows** (see page 1 - 38). This will help prevent hard disk or system problems.

![Opening the Lid/LCD & Computer with AC/DC Adapter Plugged-In](image)

**Figure 1 - 1** - Opening the Lid/LCD & Computer with AC/DC Adapter Plugged-In
System Software
Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find the Windows 10 (64-bit) operating system is supported.

Windows OS
Note that the information included on the following pages is for Windows 10 only.
In order to run Windows 10 (64-bit) your computer requires a minimum 8GB of system memory (RAM).
Quick Start Guide

LCD Panel Open - Model A

1. Built-in PC Camera
2. PC Camera LED
3. Built-In Array Microphone
4. LCD
5. Speakers
6. Power Button
7. Keyboard
8. Touchpad & Buttons
9. Fingerprint Reader (Optional with Secure Pad)

Note that the Touchpad and Buttons has a valid operational area indicated within the dotted lines above.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the WLAN, Bluetooth & 3G/4G module(s) are OFF if you are using the computer aboard aircraft by putting the system in to Airplane Mode (see Table 1 - 5, on page 1 - 19).

Table 1 - 1 - LED Indicators
Illuminated Color LED Keyboard

The illuminated colored keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See Table 1 - 5, on page 1 - 19 for full function key combination details, and see “Keyboard Backlight LED” on page 1 - 10.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However, special functions/hot-keys unique to the system’s regular keyboard may not work.

Scr Lk

Hold down the Fn Key and Scr Lk to enable scroll lock and check the LED indicator for status.

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.
Keyboard Backlight LED

Press \textbf{Fn} plus the  \textbf{2} key to toggle the keyboard LED on/off. The keyboard LED may be configured using the \textbf{Fn + key combination} outlined in the table below. In addition press \textbf{Fn} plus the  \textbf{1} key to launch the keyboard backlight application to configure the settings (see overleaf).

\textit{Table 1 - 2 - Main Keyboard LEDs}
Keyboard Backlight Application (for Illuminated Colored Keyboards)

The **Keyboard Backlight application** can be accessed by pressing the **Fn** plus key (or by clicking the **Flexikey** button in the **Gaming** section of the Control Center, and then clicking the **Backlight** tab).

*Figure 1 - 5 - Keyboard Backlight Application*
Quick Start Guide

Brightness
Click on any of the numbers (0 - 3) on the brightness bar to set the brightness level of the keyboard backlight.

Color Swatch
The color swatch in the top right of the screen allows you to select a range of colors for your keyboard backlight by clicking on the color required. You can choose to display the swatch either in Full Color or as a 256 Color Scheme. Click the Custom mode button to select any colors from the swatch and to apply your chosen colors to parts of the keyboard (and Top Case Logo LED if applicable).

Figure 1 - 6 - Keyboard Backlight Color Swatches

1 - 12 Keyboard Backlight LED
Modes
The buttons surrounding the swatch allow you to alter the effects of the keyboard backlight. Click on any of the buttons to view the effects on the keyboard. Click **Save** when exiting the application to retain the setting.

</tbody>
</table>

**Illumination Keys**

Note that the keyboard illumination (increase/decrease) keys may be used to configure the keyboard LED in **Custom Mode** only.

*Table 1 - 3 - Mode Buttons*
Quick Start Guide

Preview
The bottom left section of the application allows you to preview setting changes made to colors on the keyboard.

Keyboard LED Sections
The bottom right section of the application allows you to select partial areas, or all, of the keyboard on which to apply the color changes and effects.

Figure 1 - 7 - Preview & Keyboard LED Sections
Sets
The application allows you to save up to 3 sets of color and effect combinations. Click **Save** when exiting the application to retain the settings.

![Sets Diagram](image)

*Figure 1 - 8 - Sets*

Save & Exit
Click **Exit** to quit the application without saving, or **Save** to exit and retain the settings.

![Save & Exit Buttons](image)

*Figure 1 - 9 - Save & Exit*
Quick Start Guide

Flexikey® Application

The Flexikey® application is a quick hotkey configuration application, which allows you to assign a single key to launch multiple key combinations, or to launch programs and applications, to create text macros and to disable certain keys. The application can also be used to configure the mouse buttons to create hotkeys for gaming etc. All the configuration settings are retained under (up to 12) profiles to which the settings are applied. Click Flexikey® in the Gaming section of the Control Center, or the click the icon in the notification area of the taskbar, to launch the application (see Appendix B for full details).

Figure 1 - 10 - Flexikey® Hotkey Application
Flexikey® Application Features:
For full details see “Flexikey® Application” on page B - 8.

- **EXPRESS KEY** - This feature allows you to configure a single key (or mouse click) to send multiple key combinations, or to create more useful shortcut keys. This is useful in gaming or when using applications which have a complex set of keyboard shortcuts.

- **LAUNCH APP** - This simply assigns single keys (or mouse clicks) to launch any program’s or application’s executable file.

- **EXPRESS TEXT** - With this, you can assign single keys (or mouse clicks) to send commonly used strings of text.

- **DISABLE** - Use this function to disable any keyboard keys or mouse buttons.

- **STATISTICS** - Use this to quickly record keys in use in any application, and to disable unused keys.
Quick Start Guide

Keyboard Shortcuts

The following Windows Logo Key (Winkey) keyboard shortcuts are useful for navigation/operation in *Windows 10*.

<table>

</tbody>
</table>

**Table 1 - 5 - Function & Hot Key Indicators**
Control Center

When in the Windows Desktop application (not in the Start screen) press the \texttt{Fn + Esc} key combination, or double-click the icon in the notification area of the taskbar to toggle the Control Center on/off. The Control Center gives quick access to frequently used controls and enables you to quickly turn the camera/touch pad on/off (see Appendix B for full details).

\textbf{Figure 1 - 11 - Control Center}

To run the Control Center press the \texttt{Fn + Esc} key combination, or double-click the icon in the notification area of the taskbar.

Close the Control Center by clicking the close icon in the top right of the panel (move the cursor onto the top right corner of the panel to highlight it).
Front & Left Views - Model A

2. Vent/Fan Intake/Outlet
3. DC-In Jack
4. HDMI-Out Port
5. Mini DisplayPort 1
6. Mini DisplayPort 2
7. 2 * USB 3.1 Gen 2 (Type C) Ports
8. USB 3.0 (USB 3.1 Gen 1 - Type A) Port
9. 1 * Powered USB 3.0 Port

**Powered USB 3.0 Port**

Note that the USB 3.0 port is not operational under DOS and does not support wake on USB. The **powered USB 3.0** port can supply power *(for charging devices only, not for operating devices)* when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices - see page 7 - 11). Toggle power to this port by using **Fn + power button**.

**USB 3.1 Gen 2 Port Speed**

Note that when a single USB device is plugged in to a USB 3.1 (Gen 2) port the data transfer speed will be 10Gbps, however when two devices are plugged in to both USB 3.1 (Gen 2) ports, this bandwidth will be shared between the ports.
Quick Start Guide

Front & Left Views - Model B

1. LED Indicators
2. Security Lock Slot
3. Vent/Fan Intake/Outlet
4. DC-In Jack
5. HDMI-Out Port
6. Mini DisplayPort 1
7. Mini DisplayPort 2
8. 2 * USB 3.1 Gen 2 (Type C) Ports
9. USB 3.0 (USB 3.1 Gen 1 - Type A) Port
10. 1 * Powered USB 3.0 (USB 3.1 Gen 1) Port

Powered USB 3.0 Port

Note that the USB 3.0 port is not operational under DOS and does not support wake on USB. The powered USB 3.0 port can supply power (for charging devices only, not for operating devices) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices - see page 7 - 11). Toggle power to this port by using $\text{Fn + power button}$.

USB 3.1 Gen 2 Port Speed

Note that when a single USB device is plugged in to a USB 3.1 (Gen 2) port the data transfer speed will be 10Gbps, however when two devices are plugged in to both USB 3.1 (Gen 2) ports, this bandwidth will be shared between the ports.
Right & Rear Views - Model A

1. Microphone-In Jack
2. 2-In-Audio Jack (Headphone / S/PDIF-Out Jack)
3. USB 3.0 (USB 3.1 Gen 1 - Type A) Port
4. Multi-in-1 Card Reader
5. SIM Card Reader (for 3G/4G USIM Cards - see over)
6. *RJ-45 LAN Jack
7. Security Lock Slot
8. Vent/Fan Intake/Outlet

*You will need to open the RJ-45 LAN Jack cover slightly before inserting a LAN cable

Multi-In-1 Card Reader

The card reader allows you to use the most popular digital storage card formats:
- MMC (MultiMedia Card) / RS MMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC up to UHS-II

Overheating

To prevent your computer from overheating make sure nothing blocks the vent(s)/fan intake(s) while the computer is in use.
Quick Start Guide

**Figure 1 - 15 Right & Rear Views**

1. Microphone-In Jack
2. 2-In-Audio Jack (Headphone / S/PDIF-Out Jack)
3. USB 3.0 (USB 3.1 Gen 1 - Type A) Port
4. Multi-in-1 Card Reader
5. SIM Card Reader (for 3G/4G USIM Cards - see over)
6. *RJ-45 LAN Jack
7. Vent/Fan Intake/Outlet

*You will need to open the RJ-45 LAN Jack cover slightly before inserting a LAN cable

**Multi-In-1 Card Reader**

The card reader allows you to use the most popular digital storage card formats:

- SD (Secure Digital) / Mini SD / SDHC / SDXC up to UHS-II

**Overheating**

To prevent your computer from overheating make sure nothing blocks the vent(s)/fan intake(s) while the computer is in use.
3G/4G Module SIM Card Installation

Insert the SIM card as illustrated below (pay careful attention to the orientation of the card as the gold contact side of the card should face upwards towards the top of the computer) until it clicks fully into position. To eject the card simply press it until it ejects, but do not attempt to eject the card while connected to a 3G/4G network (see below).

**SIM Card Orientation**

Note that the SIM card's readable side (with the gold-colored contacts) should face upwards as illustrated.

**SIM Card Ejection**

Simply press on the SIM card to eject it, however do not do this while a connection is in progress.

If you do eject the card while a 3G/4G connection is ongoing, you will need to shut down the system, reinsert the SIM card, restart the system and then re-establish the 3G/4G connection.

If you wish to change SIM cards then you will need to shut the system down, reinsert the SIM card, restart the system and then reestablish the 3G/4G connection.
Quick Start Guide

**Battery Information**
Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges. See "Battery Information" on page 3 - 17 for full instructions. This model’s battery is embedded and cannot be removed without violating the terms of your warranty. Contact your distributor/supplier for details.

**Overheating**
To prevent your computer from overheating, make sure nothing blocks the Vent/Fan Intake while the computer is in use.

**Bottom Cover Removal Warning**
Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

Windows 10 Start Menu

Most of the apps, control panels, utilities and programs within Windows 10 can be accessed from the Start Menu by clicking the icon in the taskbar in the lower left corner of the screen (or by pressing the Windows Logo Key on the keyboard).

Figure 1 - 19 - Windows Start Menu
Right-Clicking the Windows Logo In Start Menu

Right-click the Start Menu icon (or use the Windows Logo Key + X key combination) to bring up an advanced Context Menu of useful features such as Control Panel, Programs and Features, Power Options, Task Manager, Search, File Explorer, Command Prompt, Device Manager and Network Connections etc.

Figure 1 - 20 - Right-Click Windows Logo in Start Menu
Quick Start Guide

Start Menu Apps & Tiles

The Windows 10 Start Menu will contain a number of apps, and many more will be installed as you add more applications etc. Not all of these apps can fit on the screen so may need click and drag the handles at the edge of the screen to expand the menu in order to view all the apps (you can use the scroll bar to move up and down the screen).

*Figure 1 - 21 - Expanding the Start Menu*
Pinning/Unpinning Apps & Programs to/from the Start Menu

To make things easy to find you can add and remove tiles for apps and programs to the Start Menu. Right-Click on a program’s icon and select **Pin to Start** from the drop-down menu. To remove an app or program from the Start Menu right-click the icon and select **Unpin from Start**. You can use the same method to **pin apps/programs to/from the taskbar** (select pin to taskbar/unpin this program from the taskbar).

![Figure 1 - 22 - Pin to Start/Unpin from Start](image-url)
Windows 10 Control Panel

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel can be accessed in a number of ways in Windows 10.

• Right-click the Start Menu icon in the taskbar in the lower left corner of the screen and select Control Panel from the menu.

• Press the Windows logo key on your keyboard and X to bring up the context menu, and then press P to bring up the Control Panel.

• Type Control Panel into the Search box in the taskbar and click on the icon when it pops up.

Figure 1 - 23 - Windows 10 Control Panel Access
Settings

The **Settings** item in the Start Menu (and also as an App) gives you quick access to a number of system settings control panels allowing you to adjust settings for System, Devices, Network & internet, Personalization, Accounts, Time & language, Ease of Access, Privacy and Update & security.

*Figure 1 - 24 - Settings*
Quick Start Guide

Windows 10 Taskbar

In many instances throughout this manual you will see an instruction to access the notification area of the taskbar. The notification area of the taskbar in the bottom right of the screen. Some of the Control Panels and applications referred to throughout the course of this manual can be accessed from here.

You can pin/unpin apps to/from the taskbar in much the same way as you can to the Start screen (see “Pinning/Unpinning Apps & Programs to/from the Start Menu” on page 1 - 31).
Video Features

You can switch display devices, and configure display options, from the Display settings (click the Start Menu and click Settings > System or right-click the desktop and select Display settings) control panel (see over). In Windows 10 it is possible to quickly configure external displays from the Project menu (press the Windows logo key on your keyboard and the P key or Fn + F7).

To Configure Displays using Project

1. Attach your display to the appropriate port, and turn it on.
2. Press the + P (or Fn + F7) key combination.
3. Click on any one of the options from the menu to select PC screen only, Duplicate, Extend or Second screen only.
4. You can also click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

Configuring External Displays

When a single external display is attached to the HDMI or Display Ports, use the System (in Settings - page C - 7) control panel or the + P (or Fn + F7 - page C - 6) key combination, to configure the external display.

When multiple external displays are attached you should use the NVIDIA (page C - 25) control panel to configure the external displays.

You cannot configure external displays using the Intel(R) HD Graphics control panel.
Quick Start Guide

To access the Display Settings:
1. You can quickly adjust the display by right-clicking the desktop and selecting Display Settings ① (Figure 1 - 27).
2. Adjust the settings using the sliders in the menu or click Advanced display settings ② (Figure 1 - 27) to change resolution.
3. Click Apply to save any changes made to resolution.

Figure 1 - 27 - Display Settings
To access the Intel(R) HD Graphics Control Panel:
1. Right-click the desktop and select Intel(R) Graphics Settings from the menu.
   OR
2. Click the icon 📅 in the notification area of the Desktop taskbar and select Intel(R) Graphics Settings from the menu.

*Figure 1 - 28 - Intel® HD Graphics Control Panel*
Power Options

Power Options (Hardware and Sound) can be accessed from the Control Panel. The Power button item in Start Menu (or the context menu) may be used to Shut down or Restart (you can also add Hibernate/Sleep to the menu - see page 1 - 39). To fully control all the power options (including Hibernate mode) go to the Power Options control panel and configure the power button, sleep button and lid to perform the function selected.

Using the Power Button
1. Go to the Start Menu.
2. Click the Power button.
3. Select the power state required from the menu.

Figure 1 - 29 - Shut Down/Renstart
You can also use the context menu (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out, Sleep, Hibernate, Shut down, and Restart**.

---

**Adding Hibernate/Sleep to the Power Men**

1. Go to the **Power Options (Hardware and Sound)** control panel.
2. Click **Choose what the power buttons do**.
3. Click "**Change settings that are currently unavailable**".
4. Click to put a check in the **Hibernate/Sleep** box under **Shut down settings**.
5. Click **Save Changes** and close the control panel.

---

**Figure 1 - 30 - Context Menu Shut Down or sign out**

**Ctrl + Alt + Delete Key Combination**

You can use the **CTRL + ALT + DEL** key combination to bring up a full-screen displaying **Lock, Sign out, Change a password, Task Manager and Switch User**. If you click the **Power** icon in the lower right corner of the screen a power management option menu appears to display **Sleep, Hibernate, Shut down, and Restart**.
Quick Start Guide

Minimum Screen Resolution Settings
1. Windows 10 has minimum screen resolution requirements.
2. Right-click a blank area of the Desktop and select Display Settings.
3. Adjust the Resolution to make sure that it is at least 1024 * 768, although preferably 1366 * 768 or above.

Figure 1 - 31 - Display Settings (Resolution)
Chapter 2: Features & Components

Overview
Read this chapter to learn more about the following main features and components of the computer:

• Hard Disk Drive/Solid State Drive
• Multi-In-1 Card Reader
• Touchpad and Buttons/Mouse
• Audio Features
Hard Disk Drive/Solid State Drive

The hard disk drive/solid state drive is used to store your data in the computer. The hard disk can be taken out to accommodate other serial (SATA) hard disk drives, however you will need to contact your distributor/supplier to do this in order to avoid violating the terms of your warranty. The system can also support solid state drives as storage devices (see “Storage” on page D - 2 for specification information).

Caddy Bay Devices

This model series supports a caddy bay for the installation of a storage device, e.g. HDD. Note that the device installed in the caddy bay is to be used for data storage only, and will not support the installation of an OS (Operating System).
Multi-In-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk (s). Make sure you install the card reader driver (see “Card Reader” on page 4 - 8).

- MMC (MultiMedia Card) / RSMMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC up to UHS-II

*Note: Some of these cards require PC adapters that are usually supplied with the cards.

Figure 2 - 1
Right Side View
Features & Components

2 Touchpad and Buttons/Mouse

The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse. Make sure you have installed the Touchpad driver (see “Touchpad” on page 4 - 8).

Touchpad Sensitivity

The mouse button zones at the bottom of the pad measure about 15mm from the bottom of the pad, and the left and right buttons are divided roughly down the middle. Press the left button zone for a left click, and right button zone for a right click action.

Mouse Driver

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.
Mouse Properties Control Panel

You can configure the functions from the Mouse control panel in Windows as follows.

1. Right-click the Start Menu icon.
2. Select Control Panel.
3. Click Mouse (Hardware and Sound > Devices and Printers).
4. Click the menu headings tabs to adjust your mouse preferences.

Disabling the Touchpad

If you need to disable the Touchpad for any reason (e.g., you may find that when using the computer's internal keyboard you accidentally trigger the Touchpad when resting your wrists or palms on it) you can do so by using Fn + F1 key combination.

Figure 2 - 3
Mouse Properties Control Panel - Buttons
Features & Components

Figure 2 - 4
Mouse Properties Control Panels

2 - 6 Mouse Properties Control Panel
Mouse & Touchpad Devices

You can also configure the functions from the **Mouse & touchpad** control panel in **Devices** in the **Settings** control panel as follows.

1. Click the **Settings** item in the **Start Menu** (this is also as an App or **All Settings** in the Action Center).
2. Click **Devices**.
3. Click **Mouse & touchpad**.

### Disabling the Touchpad

If you need to disable the Touchpad for any reason (e.g. you may find that when using the computer's internal keyboard you accidentally trigger the Touchpad when resting your wrists or palms on it) you can do so by using **Fn + F1** key combination.

*Figure 2 - 5*

**Settings > Mouse & touchpad**
Features & Components

Touchpad Settings
You can disable the Touchpad by clicking the Touchpad button to turn it off.

You can set the system to automatically disable the internal Touchpad when an external USB point device (e.g., a USB mouse) is attached. Click “Leave touchpad on when a mouse is connected” to off.

Figure 2 - 6
Mouse & Touchpad
(Touchpad turned off when mouse connected)
**Touchpad Taps**
Make sure “Allow taps on the touchpad” is on if you want to use the tap feature.

The *Delay* feature helps prevent recognizing taps on the pad by accident, by recognizing when your palm is resting on it or brushing its surface while you are typing.

Use the drop-down menu to either turn off any delay, or to adjust the delay to your preference.
Features & Components

You can use a specific gesture or taps on the surface of the pad to perform specific actions to manipulate documents, objects, and applications, and these may be enabled or disabled by clicking on the appropriate button.

- Press on the lower right corner of the touchpad to right-click: On
- Allow double-tap and drag: On
- Use a two-finger tap for right-click: On
- Use a two-finger drag to scroll: On
- Use a two-finger pinch to zoom: On

Figure 2-8
Mouse & Touchpad Taps and Gestures

2 - 10 Mouse & Touchpad Devices
The **two-finger tap** acts as a **right-click mouse** action and can bring up context menus etc.

The **two-finger scrolling** feature works in most scrollable windows and allows you to scroll horizontally and vertically. Place two fingers, slightly separated, on the Touchpad surface and slide both fingers in the direction required (in a straight continuous motion).

![Scrolling Gesture](image)

The **two-finger** pinch to zoom gesture can be used to perform the same function as a scroll wheel in *Windows* applications that support CTRL + scroll wheel zoom functionality. Place two fingers on the pad (for best results use the tips of the fingers) and slide them apart to zoom in, or closer together to zoom out.

![Zooming Gesture](image)
The **three and four-finger taps** may be configured to trigger **Cortana Search** or the **Action Center**.

The **three finger-drags & slides** gesture may be used to enhance navigation with a variety of applications such as browsing the Internet or scrolling through a photo viewer.
The following is an overview of the main gestures you can use with your Touchpad.

Figure 2 - 13
Touchpad Gestures
Audio Features

You can configure the audio options on your computer from the Sound control panel in Windows, or from the Realtek HD Audio Manager icon in the notification area/control panel (right-click the notification area icon to bring up an audio menu and select Sound Manager). The volume may also be adjusted by means of the Fn + F5/F6 key combination (see Table 1 - 5, on page 1 - 19).

Right-click the icon to access the menu above, and then select Sound Manager.

See “HDMI Audio Configuration” on page C - 8 for a description of the audio configuration when connecting an HDMI supported display device.
Setup for Audio Recording - Realtek Standard

(For systems supporting Cortana see over)

To record audio sources on your computer at optimum quality follow the instructions below:

1. Click **Control Panel** and make sure you are in **Classic View**.
2. Click **Realtek HD Audio Manager** (or right-click the notification area icon and select **Sound Manager**).
3. Click **Microphone Effects** (tab) in **Microphone** (tab), and then click to select **Noise Suppression** (button), or adjust the **Recording Volume** level to around 60, to obtain the optimum recording quality.
4. Click **OK** to close the control panel and save the settings.

---

**Auto Popup Dialog**

You should enable the auto popup dialog to automatically detect when a device has been plugged-in. If disabled, double-click **connector settings** and click the box to enable the auto popup detection of plugged-in devices.

---

Figure 2 - 15
Realtek Audio Manager - Recording Setup (Standard)
Setup for Audio Recording - For Cortana

(For standard Realtek systems see previous)

To record audio sources on your computer at optimum quality follow the instructions below:

1. Click Control Panel and make sure you are in Classic View.
2. Click Realtek HD Audio Manager (or right-click the notification area icon and select Sound Manager).
3. Click the Microphone tab and adjust the Recording Volume level to around 60, and enable any of the effects suitable for your environment to obtain the optimum recording quality.
4. Click OK to close the control panel and save the settings.

Figure 2 - 16
Realtek Audio Manager - Recording Setup (Cortana)

Auto Popup Dialog

You should enable the auto popup dialog to automatically detect when a device has been plugged-in. If disabled, double-click connector settings and click the box to enable the auto popup detection of plugged-in devices.
Setup for Headphones/Speakers/S/PDIF - 2-In-1 Audio Jack
To connect either headphones, speakers or a S/PDIF supported system to the 2-In-1 audio jack follow the instructions below:
1. Plug either the headphones or a S/PDIF supported system in to the 2-In-1 audio jack.
2. When the pop-up menu appears make sure you select the appropriate device by putting a check in the box alongside it and clicking OK.
3. To make sure the pop-up menu appears see sidebar.

Auto Pop-Up Dialog
You should enable the auto pop-up dialog to automatically detect when a device has been plugged-in. If disabled, double-click connector settings and click the box to enable the auto pop-up detection of plugged-in devices.

Figure 2 - 17
Pop-Up Menu for Audio Devices

Features & Components
Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system. This chapter covers:

• The Power Sources
• Turning On the Computer
• Power Plans
• Power-Saving States
• Configuring the Power Buttons
• Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.
The Power Sources

The computer can be powered by either an AC/DC adapter or a battery pack.

AC/DC Adapter

Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   - Attach the AC/DC adapter cord to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and leave it there for 6 seconds or longer.
   - Remove the adapter cord from the computer’s DC-In jack, and then plug it back in again; the battery will now be unlocked.

2. Raise the lid/LCD to a comfortable viewing angle.
3. Press the power button to turn “On”.

Battery

The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. **To increase battery life, let the battery discharge completely before recharging** (see “Battery FAQ” on page 3 - 21).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 17.
Turning On the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options (Hardware and Sound) in the Windows control panel to configure this feature.

Power Button as Stand by or Hibernate Button

You can use the OS’s “Power Options” control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS’s documentation, or “Configuring the Power Buttons” on page 3 - 9 for details).
Shutting the Computer Down

Note that you should always shut your computer down by choosing the **Shut down** command as this will help prevent hard disk or system problems. Use the **Power** item in the **Start Menu** and select **Shut down**.

You can also use the **context menu** (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out, Sleep, Hibernate, Shut down**, and **Restart**.

If you want to add Hibernate/Sleep to the Power Menu see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 10.
Power Plans
The computer can be configured to conserve power by means of power plans (Control Panel > Power Options). You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

Password
It is recommended that you enable a password on system resume in order to protect your data.

Resuming Operation
See Table 3 - 1, on page 3 - 11 for information on how to resume from a power-saving state.
Each *Windows power plan* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose **High performance** (you may need to click *Show additional plans* to view the High performance plan) for maximum performance when the computer is powered from an AC power source. Choose the **Power saver** (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

*Figure 3 - 3 Power Plans*

Click to Show/Hide additional power plans
Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. *Windows 10* uses the **Sleep**, **Hibernate** and **Shut Down** power-saving states.

**Sleep**

In **Sleep** all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter **Sleep** to save power.

The PC wakes from **Sleep within seconds** and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in **Sleep** is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.

To add **Sleep** to the **Power Menu** see “*Adding Hibernate/Sleep to the Power Menu*” on page 3 - 10.
Hibernate

Hibernate uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. Hibernate will also return you to where you last left off within seconds. You should put your mobile PC into Hibernate if you will not use the computer for a period of time, and will not have the chance to charge the battery. To add Hibernate to the Power Menu see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 10.

Shut down

You should Shut down the computer if you plan to install new hardware, plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from Shut down takes longer than from Sleep or Hibernate.
Configuring the Power Buttons

The power/sleep button (Fn + F12 key combo) and closed lid may be set to send the computer in to a power-saving state. Click Choose what the power buttons do on the left menu in Power Options to bring up the menu.

Password Protection

It is recommended that you enable a password on wake up in order to protect your data. However you can disable this setting from the Power Options menu by clicking Require a password on wakeup in the left menu, and selecting the options (click Change settings that are currently unavailable).

Figure 3 - 5
Power Options
Define Power Buttons
Adding Hibernate/Sleep to the Power Menu

Add Hibernate/Sleep to the Power Menu as follows.

1. Go to the Power Options (Hardware and Sound) control panel.
2. Click “Change settings that are currently unavailable”.
3. Click Choose what the power buttons do.
4. Click to put a check in the Hibernate/Sleep box under Shutdown settings.
5. Click Save Changes and close the control panel.

Figure 3 - 6
Power Options
Define Power Buttons - Shutdown Settings
Resuming Operation

You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (\texttt{Fn + F12} key combo).

<table>
<thead>
<tr>
<th>Power Status</th>
<th>Icon Color</th>
<th>To Resume</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Off</td>
<td>Off</td>
<td>Press the Power Button</td>
</tr>
<tr>
<td>Sleep</td>
<td>Blinking Green</td>
<td>Press the Power Button</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Press the Sleep Button (Fn + F12 Key Combo)</td>
</tr>
<tr>
<td>Hibernate</td>
<td>Off (battery)</td>
<td>Press the Power Button</td>
</tr>
<tr>

<td>Orange (AC/DC adapter)</td>
<td>Press the Power Button</td>
</tr>
<tr>
<td>Display Turned Off</td>
<td>Green</td>
<td>Press a Key or Move the Mouse/Touchpad</td>
</tr>
</tbody>
</table>

\textbf{Power Button}

When the computer is on, you can use the power button as a Sleep/Hibernate/Shut Down hot key button when it is pressed for less than \textbf{4 seconds} (pressing and holding the power button for longer than this will force the computer to shut down).

\textbf{Closing the Lid}

If you have chosen to send the computer to \textbf{Sleep} when the lid is closed, raising the lid will wake the system up.
Power Management

Power Conservation Modes
This system supports **Power Saving** power management features that place computers (CPU, hard drive, etc.) into a low-power sleep modes after a designated period of inactivity. Adjust **Power Conservation Modes** from the **Control Center**:

1. Press the **Fn + Esc** key combination to toggle the **Control Center** on/off.
2. Click either the **Performance**, **Balanced** or **Power Saving** button.

![Figure 3 - 7 Control Center](image)

---

**Power Conservation Modes**

The **Power Saving** setting will result in maximum power saving, but with the possible loss of some performance.

Setting the mode to **Balance** will give power saving matched with performance.

**Performance** will give optimum computer performance but with less power conservation.

Note that the **Energy Star** setting will put the display into sleep after no more than 15 minutes of user inactivity.
Ctrl + Alt + Delete Key Combination
You can use the ***CTRL + ALT + DEL*** key combination from almost any of the ***Windows 10*** interfaces/Apps to bring up a full-screen displaying **Lock**, **Switch User**, **Sign out**, **Change a password** and **Task Manager** options. If you click the **Power** icon in the lower right corner of the screen a power management option menu appears to display **Sleep**, **Shut down**, and **Restart**.

To fully control all the power options (including Hibernate mode) go to the **Power Options** control panel and configure the power button, sleep button and lid to perform the function selected.
Settings Menu Power Controls

The Settings item in the Start Menu (and also as an App) gives you access to a number of power settings control panels which enable you to quickly adjust power options. Click System to access the menu including the power option settings.

Figure 3 - 9
Settings
Battery Saver

Battery Saver will display the battery level, and by clicking Battery Use you can see the current state of battery usage by application etc. Click Battery saver settings to adjust the battery saver level.

Figure 3 - 10
Settings > Battery Saver
Power Management

Power & Sleep

Power & sleep gives you quick access to Screen and Sleep settings. Click Additional power settings to go to the main power options control panel.

*Figure 3 - 11*
Settings > Power & Sleep

3 - 16 Settings Menu Power Controls
Battery Information

Follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan Change plan settings > Change advanced power settings (see Figure 3 - 3 on page 3 - 6).

Click the battery icon in the notification area to see the current battery level and charge status (you can also click Power & sleep settings to access the Settings menu to quickly adjust power settings).

Low Battery Warning

When the battery is critically low, immediately connect the AC/DC adapter to the computer or save your work; otherwise, the unsaved data will be lost when the power is depleted.

Figure 3 - 12
Battery Icon (Notification Area) & Battery Advanced Settings
Power Management

Conserving Battery Power

- Use a power plan that conserves power (e.g. Power saver), however note that this may have an affect on computer performance.
- Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
- Reduce the amount of time before the display is turned off.
- Close wireless, Bluetooth, modem or communication applications when they are not being used.
- Disconnect/remove any unnecessary external devices e.g. USB devices, ExpressCards etc.

Figure 3 - 13
Windows Mobility Center
(Control Panel)
Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days. We recommend that you do not remove the battery yourself.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 21 for instructions on how to do this).

Recharging the Battery with the AC/DC Adapter
The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. Refer to “LED Indicators” on page 1 - 9 for information on the battery charge status, and to “Battery FAQ” on page 3 - 21 for more information on how to maintain and properly recharge the battery pack.
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

**Caution**

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.

**Damaged Battery Warning**

Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your distributor/supplier. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. Create a power plan for discharging the battery and set all the options to Never.

[Figure 3 - 14: Power Plan Create]
3. Click **Change plan settings** (after creating it) and click **Change plan settings > Change advanced power settings**.

**Figure 3 - 15**
Change Plan Settings / Change Advanced Power Settings
4. Scroll down to **Battery** and click + to expand the battery options.
5. Choose the options below (click **Yes** if a warning appears):

   - Low battery levels = 0%
   - Critical battery Levels = 1%
   - Low battery action = Do Nothing
   - Critical battery action (On battery) = Shut Down
   - Critical battery action (Plugged in) = Do Nothing
Power Management

**How do I fully charge the battery?**
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

**How do I maintain the battery?**
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

You will need to attach an external optical CD/DVD device drive to install the drivers from the Device Drivers & Utilities + User’s Manual disc. The disc contains the drivers and utilities necessary for the proper operation of the computer. Table 4 - 1, on page 4 - 4 lists what you need to install and it is very important that the drivers are installed by the method outlined in this chapter, and in the order indicated. Note that the information on the following pages is for Windows 10 (64-bit only).

Module Driver Installation

The procedures for installing drivers for the Wireless LAN, Bluetooth & WLAN Combo, Intel Technology, Sound Blaster and 3G/4G modules are provided in “Modules” on page 6 - 1.
Drivers & Utilities

Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click the message “Tap to choose what happens with this disc.”
3. Click Run autorun.exe.
4. Click Install Drivers (button), or Option Drivers (button) to access the Optional driver menu.

Figure 4 - 1 - Drivers Installer Screen 1
5. Check the driver installation order from Table 4-1, on page 4-4 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.
6. Click to select the driver you wish to install, (you should note down the drivers as you install them).
7. Follow the instructions for each individual driver installation procedure as listed on the following pages.

Figure 4-2 - Install Drivers
Drivers & Utilities

All drivers provided are for the Windows 10 (64-bit) operating system.

Table 4 - 1 - Driver Installation

Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.

4 - 4 Driver Installation
Manual Driver Installation
Click *Browse CD/DVD* (button) in the *Drivers Installer* application and browse to the executable file in the appropriate driver folder.

Windows Update
After installing all the drivers make sure you enable *Check for updates* (*Settings > Update & security > Check for updates*) in order to get all the latest security updates etc. (all updates will include the latest hot-fixes from Microsoft). See “*Windows Update*” on page 4 - 9 for instructions.

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the *Control Panel* in the *Windows OS* and double-click the *Programs* icon (*Programs > Uninstall a program*). Click to select the driver (if it is not listed see below) and click *Uninstall*, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the *Programs and Features* menu:

1. Go to the *Control Panel*.
2. Double-click *Device Manager* (*Hardware and Sound > Devices and Printers > Device Manager*).
3. Double-click the *device* you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click *Driver* (tab) and click the *Update Driver* or *Uninstall* button and follow the on screen prompts.
Drivers & Utilities

User Account Control
If a User Account Control prompt appears as part of the driver installation procedure, click Continue or Allow, and follow the installation procedure as directed.

Windows Security Message
If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or “Install” to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found
If you see the message “New Hardware Found” during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.

Driver Installation General Guidelines
The driver installation procedure outlined in this Chapter (and in Chapter 7 Options & Modules), are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. Next > Next > Finish) unless you are an advanced user. In many cases a restart is required to install the driver.

Make sure any modules (e.g. WLAN or Bluetooth) are ON (i.e. the system is not in Airplane Mode) before installing the appropriate driver.
Driver Installation Procedure
Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button).

Chipset
Note: During the driver installation process the screen resolution may change. Make sure you restart after the driver installation process, as instructed, in order to restore the original resolution.
1. Click 1.Install Chipset Driver > Yes.
2. Click Next > Accept > Install.
3. Click Finish.
4. Click Restart Now to restart the computer.

Intel Video (VGA)
1. Click 2.Install Intel VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

NVIDIA Video (VGA)
1. Click 3.Install NVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click Restart Now to restart the computer.
5. After all the drivers have been installed (an internet connection is required) run the NVIDIA GeForce Experience by clicking the desktop icon (or App).
6. Restart the computer and run the application again after restart.

Note: After installing the video driver go to the Display/Display Settings control panel to adjust the video settings to the highest resolution.
LAN
Note: If the computer enters a deep sleep mode during installation, you will be prompted to plug in a network cable, and click OK, to continue installation. If a network cable is not available, restart the system and re-install the LAN driver.
1. Click 4.Install LAN Driver > Yes.
2. Click Next > Install.
3. Click Finish.

Card Reader
1. Click 5.Install Cardreader Driver > Yes.
2. Click Finish.

Touchpad
1. Click 6.Install Touchpad Driver > Yes.
2. Click Next.
3. Click the button to accept the license agreement and click Next.
4. Click Finish > Restart Now to restart the computer.

Control Center
1. Click 7.Install Control Center AP > Yes.
2. Click Next > Install.
3. Click Finish to restart your computer.

Airplane
Note: Do not use Update Driver in Device Manager to install the Airplane mode driver.
1. Click 8.Install Airplane Driver > Yes.
2. Click Next > Install.
3. Click Finish to restart the computer.

MEI Driver
1. Click 9.Install MEI Driver > Yes.
2. Click Next.
3. Click the check box to accept the license and then click Next.
4. Click Next.
5. Click Finish.
Audio
1. Click **10. Install Audio Driver > Yes**.
2. Click **Next > Next**.
3. Click **Finish** to restart the computer.

After installing the audio driver the system will not return to the **Drivers Installer** screen. To install any of the optional drivers, eject the **Device Drivers & Utilities + User’s Manual** disc and then reinsert it (or double-click the disc icon in My Computer), and click **Option Drivers** (button) to access the optional driver menu.

It is recommended that you install the **Sound Blaster Audio** application (see "**Sound Blaster Audio** on page 6 - 24") and **Intel Rapid Storage Technology** driver (see "**Intel® Rapid Storage Technology** on page 6 - 47 - required for AHCI & RAID mode).

---

**Windows Update**

After installing all the drivers make sure you enable **Windows Update** in order to get all the latest security updates etc. (all updates will include the latest **hotfixes** from Microsoft).

To enable **Windows Update** make sure you are connected to the internet:
1. Go to the **Control Panel**.
2. Click **Windows Update** (System and Security/Security).
3. Click **Check for updates** (button).
4. The computer will now check for updates (you need to be connected to the internet).
5. Click **Install now** (button) to begin checking for the updates.
6. Click **Install updates** (button) to install the updates.
Drivers & Utilities

Optional Drivers
See the pages indicated in *Table 4 - 1, on page 4 - 4* for the driver installation procedures for any modules included in your purchase option.

*Figure 4 - 3 - Optional Drivers Installer Screen*

**Note** that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software:

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in Setup. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: *Don’t make any changes unless you are sure of what you are doing*. Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.
The Setup Utility

Each time you turn on the computer the system takes a few seconds to conduct a POST, including a quick test of the on-board RAM (memory).

As the POST proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run Setup.

If there are no problems, the Setup prompt will disappear and the system will load the operating system. Once that starts, you can’t get into Setup without rebooting.

The Aptio Setup Utility tells the system how to configure itself and manage basic features and subsystems (e.g. port configuration).

To enter Setup, turn on the computer and press F2 (give the system a few seconds to enter Setup). If the Boot Logo is enabled the F2 on screen will be highlighted to illustrate that the system is processing the request during the POST (or press F7 for boot options). If you get a “Keyboard Error”, (usually because you pressed F2 too quickly) just press F2 again.

If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The Setup main menu will appear.

To see the boot options press F7 and choose your preferred boot device.
Failing the POST
Errors can be detected during the POST. There are two categories, “fatal” and “non-fatal”.

Fatal Errors
These stop the boot process and usually indicate there is something seriously wrong with your system. Take the computer to your service representative or authorized distributor/supplier as soon as possible.

Non-Fatal Errors
This kind of error still allows you to boot. You will get a message identifying the problem (make a note of this message!) and you can then press F7 (the F7 on screen will be highlighted to illustrate that the system is processing the request) for boot options.

Press F2 (give the system a few seconds to enter Setup; the F2 on screen will be highlighted to illustrate that the system is processing the request) to run the Setup program and try to correct the problem. If you still get an error message after you change the setting, or if the “cure” seems even worse, call for help.
Setup Screens
The following pages contain additional advice on portions of the Setup. Along the top of the screen is a menu bar with menu headings. When you select a heading, a new screen appears. Scroll through the features listed on each screen to make changes to Setup.

Instructions on how to navigate each screen are in the box at the bottom right side of the screen.

If these tools are confusing, press F1 to call up a General Help screen, and then use the arrow keys to scroll up or down the page.

The Item Specific Help on the upper right side of each screen explains the highlighted item and has useful messages about its options.

If you see an arrow next to an item, press Enter to go to a sub-menu on that subject. The sub-menu screen that appears has a similar layout, but the Enter key may execute a command.
Main Menu

SATA Port # (Main Menu)
Pressing Enter opens the sub-menu to show the configuration of HDDs on the computer’s SATA Ports.
System Time & Date (Main Menu)
The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.

System/Extended Memory: (Main Menu)
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.

MB Series / BIOS Revision / KBC/EC firmware Revision / MAC Address
This item contains information on the BIOS version, network adapter address etc., and is not user configurable.
Advanced Chipset Control (Advanced Menu)
The sub-menu here allows you to enable/disable GPU Performance Scaling, Flex-iCharger and VT-d (see page 5 - 9).
SATA Mode (Advanced Menu)
The SATA (Serial ATA) control is configured to operate in AHCI (Advanced Host Controller Interface) mode or in Intel RST Premium (for Intel® Optane™) mode.

The SATA Mode should be set BEFORE installing an operating system, and after you have backed up all necessary files and data (see sidebar). See “Setting Up SATA Mode (Optane™ or AHCI)” on page 6 - 2 for details. Make sure you install the Intel Rapid Storage Technology application if you have set the SATA Mode to Intel RST Premium, or to AHCI (see “IRST Driver Installation” on page 6 - 47).

If you wish to change your SATA mode to/from AHCI/Intel RST (Optane) mode note that doing so may prevent your operating system from booting, and may require a reinstall of the OS. If you do wish to change the SATA mode then backup any necessary data on your hard disk(s) as you will need wipe the disks clean in order to prevent system problems.

Power On Boot Beep (Advanced Menu)
Use this menu item to enable/disable the beep as the computer starts up.

Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the battery low alarm beep.
GPU Performance Scaling (Advanced Menu > Advanced Chipset Control)
You can enable/disable NVIDIA GPU Performance scaling from this menu. The NVIDIA Card does the scaling if this option is on, and has less latency than the Intel GPU. This can be useful if you play games etc.

FlexiCharger Enable (Advanced Menu > Advanced Chipset Control)
The sub-menu here allows you to enable/disable the FlexiCharger. The FlexiCharger may be set to automatically start charging your battery when the battery reaches a certain capacity level (e.g. you could start the battery charge level at 40%).
You can then set the level to stop charging (e.g. 100%), and of course this stop charge level must be higher then the start charge level.

See the sidebar warning for information on running the FlexiCharger for an extended period as this is not recommended.
VT-d (Advanced Menu > Advanced Chipset Control)
Enable/disable Intel® Virtualization Technology for Directed I/O (VT-d) from this menu. This extends Intel's Virtualization Technology (VT) by providing hardware assists for a virtualization solution.
Security Menu

Set Supervisor Password (Security Menu)
You can set a password for access to the **Aptio Setup Utility**. This will not affect access to the computer OS (only the **Aptio Setup Utility**).
Note: To clear existing passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance.

Set User Password (Security Menu)
You can set a password for user mode access to the Aptio Setup Utility. This will not affect access to the computer OS, (only the Setup utility) unless you choose to set a Password on Boot (see below). Many menu items in the Aptio Setup Utility cannot be modified in user mode.

Note: You can only set the user password after you have set the supervisor password.

Password on boot: (Security Menu)
Specify whether or not a password should be entered to boot the computer (you may only set a password on boot if a supervisor password is enabled). If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Password Warning
If you set a boot password (Password on boot is “Enabled”), NEVER forget your password.

The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
Secure Boot Control (Security Menu)
Secure Boot prevents unauthorized operating systems and software from loading during the startup process. Secure Boot is available as a menu option if you have enabled UEFI Boot (see “UEFI Boot (Boot Menu)” on page 5 - 16). Enabling Secure Boot will bring up the Secure Boot Mode menu to enable you to configure Secure Boot as Standard (with a fixed secure boot policy) or Customized (which enables you to make changes to the Key Management database if required).

Figure 5 - 6
Security - Secure Boot (Key Management)
TPM Configuration (Security Menu - with UEFI Enabled)
This sub-menu will allow you to enable/disable Trusted Platform Module (TPM) support. Press Enter to access the Security Device Support menu and select Enable to support TPM as long as UEFI Boot is enabled (see “Trusted Platform Module” on page 6 - 59 for details).

Figure 5 - 7
Security Device Support
Boot Menu

When you turn the computer on it will look for an operating system (e.g. Windows 7) from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot Option Priorities. Item specific help on the right is available to help you move devices up and down the order.
**Boot Option Priorities (Boot Menu)**
Press Enter to access the menu, use the arrow keys to move up and down the menu, and press Enter to select a device from the **Boot Option #** list (the selected device will be highlighted in white).

**UEFI Boot (Boot Menu)**
Enable/disable UEFI Boot from this menu. The Unified Extensible Firmware Interface (UEFI) specification provides a clean interface between operating systems and platform firmware at boot time. In contrast to BIOS, UEFI defines a set of standard boot and runtime services. The **Network Stack** will be enabled as an option under UEFI Boot.
Exit Menu

Click **Save Changes and Reset** to save all changes made. Choosing to **Discard Changes**, or **Exit Discarding Changes**, will wipe out any changes you have made to the **Setup**. You can also choose to restore the original **Setup** defaults that will return the **Setup** to its original state, and erase any previous changes you have made in a previous session.
Chapter 6: Modules & Options

Overview

This chapter contains information on the following modules, which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

- Setting Up SATA Mode (Optane™ or AHCI)
- Wireless LAN Module
- Fingerprint Reader Module
- Bluetooth & WLAN Combo Module
- Sound Blaster Audio
- Intel® Rapid Storage Technology
- PC Camera Module
- Trusted Platform Module
- 3G/4G Module

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the WLAN & Bluetooth module(s) are OFF (or the system is in Airplane Mode) if you are using the computer aboard aircraft (see Table 1 - 5, on page 1 - 19).
Setting Up SATA Mode (Optane™ or AHCI)

**AHCI Mode**
Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced serial ATA features such as Native Command Queuing (for maximum hard disk efficiency and performance). Make sure you install the **Intel® Rapid Storage Technology** application to support your HDDs/SSDs in AHCI mode (see “Intel® Rapid Storage Technology” on page 6-47).

**Intel® Optane™**
Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to an non volatile, low latency Intel® Optane™ SSD.

Contact your distributor or supplier to see if your system supports this technology.

**Intel® Rapid Storage Technology Application**
Make sure you install the **Intel® Rapid Storage Technology** application if you have set up your system in **Intel RST Premium** (for Intel® Optane™) mode (see “Intel® Rapid Storage Technology” on page 6-47).

After setting the SATA mode to **Intel® Optane™ and installing the Intel® Rapid Storage Technology** application, DO NOT uninstall the **Intel® Rapid Storage Technology** application.
Intel® Optane™ Setup Procedure

After initial setup make sure you install the Intel Rapid Storage Technology driver - see “IRST Driver Installation” on page 6 - 47).

See also “Clearing Intel® Optane™” on page 6 - 7 (however backup up any necessary files and data before deleting an Optane setup, as doing so will result in the loss of all data on the volumes).

You need to setup Intel® Optane™ before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

• The Microsoft Windows 10 OS DVD.
• An attached external DVD drive.
• An Intel® Optane™ SSD installed in your system.
• The Device Drivers & Utilities + User’s Manual disc.

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Go to the Boot menu, select UEFI Setting and press <Enter> (see page 5 - 15).
3. Set UEFI Boot to “Enabled”.
4. Press <Esc> to exit the menu and go to the Main menu.
5. Select OffBoard NVMe Controller Configuration and press enter to check that an Intel® Optane™ SSD is present.
6. Press <Esc> to exit the menu and go to the Advanced menu.
7. Select **SATA Mode** (see page 5 - 8), press <Enter> and select “**Intel RST Premium**”.

8. Press <F4> and <Yes> to “**Save Changes and Reset**”.

9. As the computer restarts press <F2> to enter the **BIOS** again.

10. Go to **Intel(R) Rapid Storage Technology (Advanced menu)** and press <Enter>.

11. . (Note this item only appears after you have restarted and accessed the BIOS again after having set **SATA Mode** to **Intel RST Premium**.)

12. If you are reinstalling a system that has previously been setup in **Intel RST Premium** mode, make sure you have cleared the Intel Optane Memory (see **“Clearing Intel® Optane™” on page 6 - 7**).
13. Press <F4> and <Yes> to “Save Changes and Reset”, however ensure that the condition in the bulleted point below is met before doing so.

- Make sure the Windows 10 OS DVD is in the attached DVD drive, as the computer starts up it will automatically boot from the Windows 10 OS DVD (you will be prompted to press a key to boot from the DVD).

14. Press <F7> as the computer starts up to bring up the boot device menu.
15. Select the DVD drive containing the Windows 10 OS DVD and press <Enter>.
16. Press a key at system startup to begin installing Windows from your Microsoft Windows 10 disc.
17. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).
18. Select Custom: Install Windows only (advanced).
19. It is recommended that you select and then delete existing partitions.
20. Click New to create a partition for Windows.
21. It is very important to make sure that when you create the partition, to leave at least a minimum of unallocated space of 5MB (see sidebar).
22. Follow the on-screen instructions to install the Windows 10 operating system.
23. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).

Creating a Windows Partition for Optane

When installing Windows, make sure that you leave a minimum of 5MB of unallocated space for the Intel® Optane™ software to create needed metadata.

After you have created a Windows partition the Windows Setup screen will display the partitions and sizes, including the unallocated space. If the unallocated space is less than 5MB, then delete the partitions and recreate them until the criteria is met.

Note this is 5MB only, not GB.
25. After installing the Intel® Rapid Storage Technology application you can access Device Manager (right-click the Start menu and select Device Manager).
26. Click Disk drives to check the Optane drive.

Figure 6 - 3
Device Manager (Disk drives)
Clearing Intel® Optane™

If you wish to clear an existing Intel® Optane™ setup then follow the procedure below to do so. However, backup up any necessary files and data before clearing an Intel® Optane™ setup, as doing so will result in the loss of all data on the volumes.

1. Make sure that Intel® Optane™ is Enabled in the Intel® Rapid Storage Technology application.
2. Start-up your computer and press <F2> to enter the BIOS.
3. Go to Intel(R) Rapid Storage Technology (in the Advanced menu) and press <Enter>.
4. Select Intel Optane, **** (listed under Optane Volume:) and press <Enter>.

[Figure 6 - 4 Intel(R) Rapid Storage Technology (Advanced Menu)]
5. Select “Deconcatenate” and press <Enter>.

6. Select Yes from the “Are you sure you want to perform deconcatentation” option.
7. Select “Start deconcatentation” and press <Enter>.

8. The system will return to the standard Intel(R) Rapid Storage Technology menu when complete (see Figure 6 - 2 on page 6 - 4).

9. You should then select the appropriate SATA Mode for your system and reinstall the OS.
Wireless LAN Module

If your purchase option includes a Combination Wireless LAN & Bluetooth module (either Intel® or Qualcomm Atheros) then install the driver for the appropriate module as instructed below.

Make sure that the module is on (i.e. the system is not in Airplane Mode) before installing the driver.

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.
Intel® WLAN Driver Installation
1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 1.Install WLAN Driver > Yes.
4. Click in the check box to agree to the End User License Agreement and click Install.
5. Click Finish.
6. The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 12).

Qualcomm Atheros WLAN Combo Driver Installation
1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into the DVD drive.
2. Click Option Drivers (button).
3. Click 1.Install WLAN Driver > Yes.
4. Select the language preferred and click Next.
5. Click Next > Next.
6. Click in the check box to accept to the License Agreement and click Next.
7. Click Finish.
8. Click Yes to restart the computer.
9. The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 12).
WLAN Configuration in Windows 10

You can configure a wireless connection using one of the following options, however make sure the Wireless LAN module is turned on (and not in Airplane Mode) before configuration begins.

1. Click the Wireless icon in the notification area of the taskbar.
2. Make sure that Airplane mode is off (the Airplane mode icon should be gray).
3. A list of available access points will appear.
4. Double-click an access point to connect to it (or click it and click Connect).

Figure 6 - 7
WiFi & Network Connections
5. Enter a network security key (password) if required, and click **Next**.
6. You can choose to share or connect to devices or not.
7. When you are connected to the network access point it will display **Connected** status.
8. Select any connected network and click **Disconnect** to disconnect from a connected access point.

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited.

Make sure the module is either **OFF** or in **Airplane mode** if you are using the computer aboard aircraft.

**Figure 6 - 8**

Network Connected (Click Disconnect)
9. You can click the **Airplane Mode** button to turn the mode On or Off.
10. You need to either use **Airplane Mode**, or to turn the **WLAN module off** aboard aircraft.
11. If you click on **Network Settings** to bring up **Network & Internet** for a more comprehensive list of network and internet settings including **Wi-Fi** (can be turned on/off), **Airplane mode** (Airplane mode and Wireless devices can be turned on/off) **VPN**, **Dial-up**, **Ethernet** and **Proxy**.
12. You can also access the **Network & Internet** settings from the **Start Menu** (Settings > Network & Internet).

![Network & Internet Settings](image)
Fingerprint Reader Module

The fingerprint reader module provides a high level of security for your computer. Make sure you have administrator’s rights to your computer, and have a *Windows* password enabled for full security protection.

There are two different fingerprint modules supplied with this model. Install the driver from the *Device Drivers & Utilities + User’s Manual* disc by following the appropriate instructions on the page overleaf.

The fingerprint reader module uses the **Sign-in options** configuration of the *Windows Account*.

*Fingerprint Reader and Power Saving States*

If your computer is in a power saving state (e.g. Hibernate or Sleep) you should keep your finger clear of the fingerprint sensor.

Allow the system to fully resume before swiping your finger across the sensor.
Fingerprint Reader Driver Installation

Note the optional driver installation order will differ depending on your Model type. Follow the number indicated on the drivers installer screen to install the driver in the correct order appropriate for your model.

1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into the DVD drive.
2. Click Option Drivers.
3. Click 2./3.Install Fingerprint Driver > Yes.
4. Click Next > Install.
5. Click Finish to complete the installation.
6. The fingerprint reader module uses the Sign-in options configuration of the Windows Account (see overleaf).
Fingerprint Module Configuration

1. Click the **Settings** item in the Start Menu and then click **Accounts** and click **Sign-in options**.
2. You will need to add a **Windows** password (click **Add** under **Password**).
3. After you have added the password you will need to also add a **PIN**.
4. Under **Windows Hello** click **Set up** under **Fingerprint**.
5. The wizard will then guide you through the set up process to scan your fingerprints.

---

**PIN Code**

You will be asked to add a PIN code when setting up the Fingerprint Reader. This is in addition to your Windows password.

Note this code as it may be required to help you sign-in if there are any issues with using the fingerprint reader to sign-in (see “Fingerprint Sign-In Issues” on page 6 - 18).

---

**Figure 6 - 10**

Accounts - Sign-in options
(Add Fingerprint)
6. You will be instructed to **swipe the same finger** across the reader a number of times (**this may be in excess of 20 times**).

7. Try to present different parts of your finger in different positions (similar to the various positions you may use when using it, and if you see red at any point try a different position).

8. Click **Close** when complete.

9. You can choose to **Add another** finger (this is recommended) or **Remove** the current fingerprint reading.

10. You can now scan your fingerprint to log-on to the computer.

---

**Fingerprint Sign-In Issues**

If at the Windows Hello screen, the Fingerprint reader fails to recognize the fingerprint 3 times it will then block access to the computer. **In this case you will need to use your PIN** (the PIN you used when initially setting up the fingerprint reader) to **access the computer**. Alternatively you can sign-in using your windows password.

After using the PIN code (or windows Password) to access the computer you can go to the **Settings > Accounts > Sign-in options** if you wish to change any settings.
Bluetooth & WLAN Combo Module

If your purchase option includes a **Combination Wireless LAN & Bluetooth module** (either Intel® or Qualcomm Atheros) then install the driver for the appropriate module as instructed below.

Make sure that the module is on (i.e. the system is not in **Airplane Mode**) before installing the driver.

**Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.**

**Note the optional driver installation order will differ depending on your Model type. Follow the number indicated on the drivers installer screen to install the driver in the correct order appropriate for your model.**
Intel Bluetooth Combo Driver Installation
1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 2./3.Install Combo BT Driver > Yes.
4. Click Next > Next.
5. Click in the check box to accept the license and click Next.
6. Select the setup type (Typical is recommended) and click Install.
7. Click Finish.
8. See “Bluetooth Configuration in Windows” on page 6 - 21 for configuration instructions.

Qualcomm Atheros Bluetooth Combo Driver Installation
1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 2./3.Install Combo BT Driver > Yes.
4. Click Next > Next.
5. Click Install.
6. Click Finish.
7. Click Yes to restart the computer.
8. See “Bluetooth Configuration in Windows” on page 6 - 21 for configuration instructions.
Bluetooth Configuration in Windows

1. Click the Settings item in the Start Menu and then click Devices (or click the Bluetooth icon in the taskbar and click Add a Bluetooth Device).
2. Click Bluetooth and make sure Bluetooth is On and a list of discovered devices will appear.
3. Double-click the device you want to pair with the computer and click Pair.
4. On first connection the computer will provide you with a pairing code to be entered onto the device.
5. Enter the code into your Bluetooth enabled device and click **Yes** on the computer to complete the pairing.
6. Select a device and click **Remove Device** to disconnect from any device.
To Make your Computer Discoverable to Bluetooth Devices

1. Click the **Settings** item in the Start Menu and then click **Devices**.
2. Click **Bluetooth** and under **Related Settings** click **More Bluetooth options** (or click the Bluetooth icon in the taskbar **Open Settings**).
3. In **Bluetooth Settings** make sure that **Allow Bluetooth devices to find this PC** check box (**Discovery**) has a check inside it.
4. Make sure that the **Alert me when a new Bluetooth device wants to connect** check box (**Notifications**) has a check inside it, if you want to be notified when a Bluetooth device wants to connect.

**Figure 6 - 14**
Bluetooth Settings
Sound Blaster Audio

Install the Sound Blaster AP to allow you to configure the audio settings to your requirements for the best performance in games, music and movies.

There are 2 versions of the Soundblaster Audio software available for this computer series.

- **Model A** computers use the Sound Blaster X® Pro-Gaming 360° Audio AP (see pages 6 - 25 to 6 - 34).
- **Model B** computers use the Sound Cinema 3 Audio AP (see pages 6 - 35 to 6 - 46).
Sound Blaster X® Pro-Gaming 360° Audio AP Installation

1. Insert the *Device Drivers & Utilities + User’s Manual* disc an attached DVD drive.
2. Click **Option Drivers** (button).
3. Click **4.Install Sound Blaster AP > Yes**.
4. Select the installation language and click **OK**.
5. Click the button and **Next** to accept the license agreement terms.
6. Click **Next**.
7. Select **Full Installation** and click **Next > Next**.
8. Click **Install**.
9. Click **Finish** to restart the computer.

Run the **Sound Blaster Connect 2** control panel from the notification area of the taskbar (or from the item in the Start menu).

![Sound Blaster Connect Icon](image)
Setup for External Speakers/Headphones

If you find the sound is not balanced when connecting to external speakers/headphones then select a pre-existing setting under Blaster Experience e.g Neutral, and test if the balance achieved is better.

It is recommended that you experiment with different settings in order to achieve the best result, and you can adjust any of the settings and these will be assigned to Personal.

Figure 6 - 16
Sound Blaster Connect (Dashboard)

Sound Blaster Connect

The Sound Blaster Connect **BLASTER X EXPERIENCE** home Dashboard contains a number of preset audio configurations for your use (or use the **Personal** setting to configure the settings to your own preference).
Sound Blaster Connect - Sound

The **Sound** page allows you to adjust the **Personal** settings for **Reality 3D**, **Equalizer**, **Acoustic Engine**, **Scout Mode** and **Environment**.

**Sound Blaster Cinema 3 Reality 3D** allows you to enable 5.1/7.1 surround sound for headphones or speakers for Music, Movie or Games (click the button to turn it on).

![Sound Blaster Connect (Reality 3D)](image)
The Equalizer allows you to manually adjust the Custom settings.

Figure 6 - 18
Sound Blaster Connect (Equalizer)
The Acoustic Engine offers a suite of playback technologies to enhance sound. Each playback technology has an On/Off button to allow you to enable/disable it, and most controls feature a dial to adjust the levels.

- **Surround**: Provides virtual sound channels to control the level of immersion.
- **Crystalizer**: Enriches audio to make it sound livelier.
- **Bass**: Enhances the bass level of the sound system.
- **Smart Volume**: Minimizes sudden volume changes to avoid the need for constant adjustment.
- **Dialog Plus**: Optimizes dialogue levels for movies etc.
Sound Blaster Connect - Scout Mode
Click on the power button to enable **Scout Mode** to enhance your ability to hear enemies in games from a further distance away than would normally be possible.

*Figure 6 - 20 Sound Blaster Connect (Scout Mode)*
Sound Blaster Connect - Environment
These profiles add a sense of realism to the gaming experience.
Modules & Options

Sound Blaster Connect - Voice Morph
These profiles allow you to alter your voice in gaming or online chats.

Figure 6 - 22
Sound Blaster Connect (Voice Morph)
Sound Blaster Connect - Setup
Setup at the bottom left of the screen contains 2 headings (Speaker and Calibration) which allow you to select the appropriate type of speakers or headphones for your system, and to adjust their calibration.

Figure 6-23
Sound Blaster Connect (Setup)
Sound Blaster Connect - Settings

General Settings at the bottom left of the screen allows you to set the language and distance preferences and to check for the latest application updates. Click Reset in Recovery to return to the factory default settings.

Figure 6 - 24
Sound Blaster Connect
(Settings > General)
Sound Blaster Cinema 3 Installation

1. Before installing the driver make sure you have a working internet connection.
2. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
3. Click Option Drivers (button).
4. Click 4.Install SBCinema AP > Yes.
5. Click Next > Full Installation (button).
6. Click Next > Finish to restart the computer.

Software Update

Check for the latest software updates by making sure you are connected to the internet and clicking Software Update from the Settings menu. Follow the instructions provided to update the software.
Sound Blaster Cinema 3 Application

Run the Sound Blaster Cinema control panel from the notification area of the taskbar (or from Creative folder item in the Apps menu). Click on the tabs to access any of the control panel menus.

Figure 6 - 25
Sound Blaster Cinema 3 Apps Menu & Taskbar Icon

Sound Blaster Cinema 3 & HDMI
Note that the Sound Blaster Cinema 3 SBX Pro Studio audio effects do not apply to audio generated through an HDMI connection.

6 - 36 Sound Blaster Audio
Sound Blaster Cinema 3 Power

The Sound Blaster Cinema 3 can be turned On/Off by clicking the Power Button (when the power is off the icon will be dimmed).

Figure 6 - 26
Sound Blaster Cinema 3 Power Button
Sound Blaster Cinema 3 - Reality 3D

Sound Blaster Cinema 3 Reality 3D allows you to enable 5.1/7.1 surround sound for headphones or speakers, and to test different surround effects. There are separate pages to allow configuration of either headphones or speakers, and you can fine tune effects for specific headphone types supported. Click **Start** to begin to configure the settings.

Figure 6 - 27

Sound Blaster Cinema 3 - Reality 3D Experience Zone (Headphones)
You can scroll left or right through the headphones supported.

![Headphones selection](image)

Volume can be adjusted by clicking on the dial.

![Volume dial](image)

Click on any of the effects buttons to test the effects.

![Effect buttons](image)
The **Speakers** page has two tabs (**3D Experience Zone** and **Speaker Calibration**) which can be accessed by clicking the icons at the top right of the page.

*Figure 6-31*
Sound Blaster Cinema 3 - Reality 3D Experience Zone (Speakers)
Click **Test** to run the **speaker calibration** test, and **Stop** once complete. Adjust the speaker distances and levels from the controls at the bottom of the page.

*Figure 6 - 32
Sound Blaster Cinema 3 - Speaker Calibration (Speakers)*
Sound Blaster Cinema 3 SBX Pro Studio

The Sound Blaster Cinema 3 SBX Pro Studio offers a suite of playback technologies to enhance sound. Each playback technology at the bottom of the screen has an **On/Off button** to allow you to enable/disable it, and most controls feature a slider to adjust the levels.

- **Surround**: Provides virtual sound channels to control the level of immersion.

![Figure 6-33: Sound Blaster Cinema 3 SBX Pro Studio Surround](image)
• **Crystalizer**: Enriches audio to make it sound livelier.

![Crystalizer](image1)

• **Bass**: Enhances the bass level of the sound system.

![Bass](image2)

- **Dialog Plus**: Optimizes dialogue levels for movies etc.

![Figure 6 - 37](Sound Blaster Cinema 3 SBX Pro Studio Dialog Plus)
Sound Blaster Cinema 3 Profiles
The Profile buttons on the left side of the screen give you preset settings to enhance your audio settings for Music, Movie, Game and Voice. You can choose Custom to adjust the settings to your own set preferences.
Sound Blaster Cinema 3 Settings
Click the Settings button at the bottom left of the page to adjust the settings to your preferences.

Figure 6 - 39
Sound Blaster Cinema 3 - Settings
Intel® Rapid Storage Technology

The Intel® Rapid Storage Technology driver supports your AHCI mode SATA drive, or your Intel® Optane™ system. Install the Intel Rapid Storage Technology application (after installing all necessary drivers in the correct order) to support your Optane system or SATA drive if set up in AHCI mode in the BIOS (see “SATA Mode (Advanced Menu)” on page 5 - 8).

IRST Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 5.Install IRST Driver > Yes.
4. Click Next > Next.
5. Click in the check box to accept the license and click Next.
6. Click Next > Next > Next.
7. Click Finish to restart the computer.
8. Run the Intel® Rapid Storage Technology app from the Apps screen.

After setting the SATA mode to Intel® Optane™ and installing the Intel® Rapid Storage Technology application, DO NOT uninstall the Intel® Rapid Storage Technology application.
Intel® Rapid Storage Technology for Optane Systems

Intel® Rapid Storage Technology application displays status information on your Intel® Optane™ configuration. Run the Intel® Rapid Storage Technology application from the item in the Start menu.

When the Intel® Rapid Storage Technology application is launched the system will open the Status window. Here you can view the general health of the storage system. Various volume creation and management options are available depending on the system’s status.

Figure 6 - 40
Intel® Rapid Storage Technology Status
Enabling Intel® Optane™

1. Run the Intel® Rapid Storage Technology application.
2. Click Enable.
3. The system will pop-up a message and ask you to select a compatible fast drive (in this case there should only be one option).
4. You will need to restart the computer after enabling **Optane**, and make sure the system is powered by the powered AC/DC adapter, and not by battery only.
5. Click **Yes** to begin the process (this may take some time).
6. After the process has been completed restart the computer.
7. After restarting can access **Device Manager** (right-click the **Start** menu and select **Device Manager**).
8. Click **Disk drives** to check that the drive should read **Intel Optane *******.
9. Run the **Intel® Rapid Storage Technology** application to check the status.
Disabling Intel® Optane™
If you need to disable Intel® Optane™ for any reason follow these instructions.

1. Run the Intel® Rapid Storage Technology application.
2. Click Disable.
3. Click Yes when the message pops up.

Disabling Intel® Optane™
Disable Intel® Optane™ if you want to reinstall/reset the system or update the IRST driver. See also “Clearing Intel® Optane™” on page 6-7.

Figure 6-45
IRST - Intel® Optane™ Memory (Disable)

Figure 6-46
IRST - Yes to Disable
4. Restart the computer to complete the process.
5. Run the Intel® Rapid Storage Technology application.
6. The **Status** of Intel® Optane™ Memory is indicated in the Window.
7. To enable Intel® Optane™ Memory follow the process indicated in “Enabling Intel® Optane™” on page 6 - 49.

![Intel® Rapid Storage Technology](image)

**Figure 6 - 47**
IRST - Intel® Optane™ Memory (Status)

**HDDs & Intel® Optane™ SSDs**

Note that if your system's HDD or Intel® Optane™ SSD is to be transferred to another system for use for any reason, you will need to disable Intel® Optane™ in IRST first.

Removal of any cover(s) and /or screw(s) violates the terms of your warranty.

**Modules & Options**
PC Camera Module

When the PC Camera application is run the LED indicator to the left of the camera will be illuminated (see Figure 1 - 2 on page 1 - 6). Note that you need to use the Camera app in Windows to take pictures and capture video. Use the Fn + F10 key combination (see “Keyboard Shortcuts” on page 1 - 18) to toggle power to the PC Camera module.

Note that you need to use the Camera app in Windows to take pictures and capture video.
Camera App
1. Make sure the PC Camera is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera app icon** (you can type “camera” into the search box to find the Camera app if it is not pinned to the Start menu).
3. The interface displays two buttons on the right of the screen; one for photo and one for video.

![Photo and Video Icons](Image)

4. Simply click on the appropriate button to switch to either photo or video modes.
5. You can use the buttons at the top to access the **Photo** collection, **Self Timer** or **Settings**.

![Camera Menu Bar](Image)
6. Click **Settings** to access the camera settings menu to make adjustments for **Camera Button** long key press function, **Photo Aspect ratio**, **Framing grid**, **video recording frame rates**, **Flicker reduction** and **Digital video stabilization**.

- The **Self Timer** may be set to take Photos after 2, 5 or 10 seconds and can also be set to continue taking pictures until the camera button is pressed again.

- The **Aspect Ratio** can be changed to those supported by the system.

- You can use a **Framing grid** to help you line up pictures.

- The **Video recording** resolution and frame rate can be set to any supported by the system. Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to File Explorer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. CD, DVD or USB Flash drive.

- If you need to reduce any screen flicker, change the settings in **Flicker reduction** to either e.g. 50Hz or 60Hz.
Taking Pictures/Capturing Video

1. Make sure the PC Camera is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera app** icon (you can type “camera” into the search box to find the Camera app if it is not pinned to the Start menu).
3. Click to select either **photo** or **video** modes.
4. Click the photo icon to take a picture, and the camera icon will briefly turn yellow as the picture is taken.
5. Click on the video icon to start video capture (if video capture begins a timer will appear at the bottom of the screen and the icon will turn yellow).
6. To stop video capture click the video icon again.
Modules & Options

7. Captured photos and videos will be saved to the Photos app stored in the Start menu (type Photos into the search box if you cannot find the app).

*Figure 6 - 52
Photo App
(For Captured Photos & Videos)*
Trusted Platform Module

(Optional)
The **TPM security chip** allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Make sure you have administrator’s rights to your computer, and have a *Windows* password enabled for full security protection. In addition **Make sure you prepare a removable media (e.g. a USB flash drive) to store passwords etc. before beginning the TPM initialization process.**

Before setting up the TPM functions you must enable and initialize the security platform.
Enabling & Activating TPM

1. Restart the computer.
2. Enter the **Aptio Setup Utility** pressing **F2** during the POST/startup.
3. Use the arrow keys to select the **Security** menu.
4. Select **TPM Configuration** and press Enter to access the sub-menu.
5. Select **Enable** in **Security Device Support**.
6. You will then need to press **F4** to save the changes and restart the computer.
TPM Management in Windows
You can manage your TPM settings from within Windows:

1. Go to the Control Panel.
2. Click BitLocker Drive Encryption (System and Security).
3. Click TPM Administration.

Figure 6 - 54
BitLocker Drive Encryption (TPM Administration)
4. The TPM Management window allows you to configure the TPM within Windows. As TPM is usually administered within large enterprises and organizations, your system administrator will need to assist you in managing the information here.

Figure 6 - 55
Trusted Platform Module (TPM) Management on Local Computer Administration

6 - 62 Trusted Platform Module
TPM Actions
1. Click **Prepare the TPM** and follow the instructions in the Wizard to prepare the TPM (this will probably require a restart of the computer and confirmation of the setting changes after restart by pressing the appropriate F key).
2. After the restart the TPM will be prepared and you can then use the **Actions** menu to **Turn TPM off**, **Change Owner Password**, **Clear TPM** or **Reset TPM Lockout**.
3. A wizard will help take you through any setup steps.

![TPM Actions Menu](image)
BitLocker

BitLocker Drive Encryption can be used in conjunction with the TPM to encrypt data on the disk. Access the Microsoft BitLocker Drive Encryption control panel applet from the Windows control panel (System and Security).

1. Click **Turn on BitLocker**.
2. Follow the on-screen instructions to setup BitLocker, and make sure you have a removable media (e.g. a USB flash drive) to store saved recovery keys etc.
3G/4G Module

If you have included an optional UMTS/HSPA+ based 3G Module (Universal Mobile Telecommunications System or High Speed Packet Access) module or LTE (Long Term Evolution) 4G module (see “Communication” on page D - 3 for specification details) in your purchase option, you do not require a driver/application installation for Windows. Follow the instructions overleaf to install the SIM card (which will be supplied by your service provider), and then use the Charms Bar Wireless icon to access the 3G/4G network in the same manner as the WLAN.

Important Notice

If your purchase option includes both Wireless LAN and 3G/4G modules, then the appropriate antennas will be installed. Note that in order to comply with FCC RF exposure compliance requirements, the antenna must not be co-located or operate in conjunction with any other antenna or transmitter.

Important Notice - 3G/4G & Bluetooth/Wireless LAN Modules

In order to comply with FCC regulations you should NOT operate the 3G/4G module and the Bluetooth/Wireless LAN modules at the same time as this may disrupt radio frequency, and cause interference. When the 3G/4G module is powered on, make sure that the Bluetooth/Wireless LAN modules are powered off.
3G/4G Module SIM Card Installation

Insert the SIM card as illustrated below (pay careful attention to the orientation of the card as the gold contact side of the card should face upwards towards the top of the computer) until it clicks fully into position. To eject the card simply press it until it ejects, but do not attempt to eject the card while connected to a 3G/4G network (see below).

**SIM Card Orientation**
Note that the SIM card’s readable side (with the gold-colored contacts) should face upwards as illustrated.

**SIM Card Insertion**

**Figure 6 - 58**
SIM Card Insertion

**SIM Card Ejection**
Simply press on the SIM card to eject it, however do not do this while a connection is in progress.
If you do eject the card while a 3G/4G connection is ongoing, you will need to shut down the system, reinsert the SIM card, restart the system and then re-establish the 3G/4G connection. If you wish to change SIM cards then you will need to shut the system down, reinsert the SIM card, restart the system and then reestablish the 3G/4G connection.
3G/4G Configuration in Windows 10

You can configure a 3G/4G connection as below, however make sure the system is not in Airplane Mode before configuration begins. You can connect to a 3G/4G connection in much the same way as the WLAN connection.

1. Click the **Settings** item in the Start Menu and then click **Network and Internet**.
2. Click **Cellular** a list of available access points will appear.
3. Click the access point and click **Connect**.
4. The system will connect to your network.
5. **Connected** will appear under the connection.
6. You can then access the internet, download e-mail etc. as per any internet connection.
7. To disconnect you can select the connection and click **Disconnect**.
8. You need to use **Airplane Mode** aboard aircraft.
9. You can also click the Wireless icon in the notification area of the taskbar, click **Cellular** and double-click an access point connect to access the connection information.
Chapter 7: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a power strip, make sure it is actually working. Check the LED Power & Communication Indicators (see “LCD Panel Open - Model A” on page 1 - 6) to see the computer’s power status.

- **Connections** - Check all the cables to make sure that there are no loose connections anywhere.

- **Power Savings** - Make sure that the system is not in Hibernate or Sleep mode by pressing the keys configured in your Power Options (see “Power-Saving States” on page 3 - 7), the Fn + F12 key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the Fn + F8 and F9 keys to adjust the brightness.

- **Display Choice** - Press Fn + F7 to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no optical media and/or USB storage devices in any connected drive.
Backup and General Maintenance

- Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

- Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Supervisor** password for the BIOS (see “The Setup Utility” on page 5 - 2).

- Keep copies of vital **settings files** such as network, dialup settings, mail settings etc.(even if just brief notes).

---

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Troubleshooting

Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Bootable CD-ROM/DVD-ROM/USB storage device” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Upgrading and Adding New Hardware/Software

- Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

- Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

- Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

- When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

- Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

- Thoroughly check any recent changes you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; Example - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.
## Troubleshooting

### Problems and Possible Solutions

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You turned on the <strong>power</strong> but it doesn’t work.</td>
<td><em>Battery missing / incorrectly installed.</em> Check the battery bay, make sure the battery is present and seated properly (the design of the battery only allows it to go in one way). Make sure there’s nothing interfering with the battery contacts.</td>
</tr>
<tr>
<td>The battery <strong>LED power</strong> indicator is blinking orange.</td>
<td><em>Low Battery.</em> Plug in the DC power source. If the computer doesn’t start up immediately, turn it off then on again.</td>
</tr>
<tr>
<td>You are <strong>losing battery power</strong> too quickly.</td>
<td><em>The system is using too much power.</em> If your OS has a <em>Power Options</em> scheme (see “Power Plans” on page 3 - 5) check its settings. You may also be using a peripheral device/USB device that is drawing a lot of power.</td>
</tr>
<tr>
<td>Actual <strong>battery operating time</strong> is shorter than expected.</td>
<td><em>The battery has not been fully discharged before being recharged.</em> Make sure the battery is fully discharged and recharge it completely before reusing (see pages 3 - 17 to 3 - 21).&lt;br&gt;<strong>Power Options have been disabled.</strong> Go to the <strong>Control Panel</strong> in <em>Windows</em> and re-enable the options.&lt;br&gt;A peripheral device/USB device is consuming a lot of power. Turn off/remove the unused device to save power.</td>

# Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
</table>
| The system will not wake up from a power saving state (Sleep/Hibernate) on network activity (Wake on LAN) even though I have plugged in the powered AC/DC adapter. | *Wake on LAN is supported in AC mode only.*  
When the system enters a power saving state the plugged in AC/DC adapter should be connected, and should remain connected, in order to allow the system to wake up on network activity. Unplugging the adapter, and then plugging it back in again, will not allow the system to wake up on network activity. |
| The computer feels too hot.                                            | *Make sure the computer is properly ventilated and the Vent/Fan intakes are not blocked. If this doesn’t cool it down, put the system into Hibernate mode or turn it off for an hour. Make sure the computer isn’t sitting on a thermal surface (see “Overheating” on page 1 - 23/1 - 26). Make sure you’re using the correct adapter.*  
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vent/Fan intakes to be blocked. |
| When playing a video in Media Player, while using a 4K panel, the counting timer area at the bottom of the screen appears to be cut off slightly. | *The size of text, apps and other items in Settings > System > Display is set to 250%. In this case it is recommended that the setting should be less than 250%.* |
| When you are playing a game and you use the Windows Key to switch to the desktop an error message, or Blue Screen, occurs. | *This is a DirectX compatibility issue. In this case disable DirectX from within the game controls.* |

</table>
| When I record audio, and the Sound Blaster Audio system environment (Blaster Experience) is configured in Gaming mode, the playback contains an echo sound. | You will need to reduce the **reverb** level in the Blaster Experience mode in the Sound Blaster AP:  
1. Select **Gaming** from the **Blaster Experience** (Dashboard).  
2. Lower the **Reverb** level from the default setting under **Environment**.  
3. The setting will be saved in **Personal** mode to be reused in future. |
Resolving the “Can’t connect to this network” issue with the 3G/4G Module

1. If you have issues connecting to the cellular network when you are attempting to use the 3G/4G network then you may need to manually connect to the Internet access point name (APN).
2. Usually the Internet APN is set automatically, however if your cellular data connection isn't working, you should try manually entering a new Internet APN based on your location and mobile operator.
3. To find your APN settings contact your mobile operator directly (or of you can connect to a WiFi network on your PC, or have a phone handy, try searching online to find the Internet APN settings for your mobile operator).
**Intel® Optane™ Notes**

Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance. However note the following;

- **The SATA Mode** should be set **BEFORE installing an operating system**, and after you have backed up all necessary files and data (see sidebar). See “Setting Up SATA Mode (Optane™ or AHCI)” on page 6 - 2 for details. Make sure you install the **Intel Rapid Storage Technology application** if you have set the SATA Mode to Intel RST Premium, or to AHCI (see “IRST Driver Installation” on page 6 - 47).

- It is very important to make sure that when you create a hard disk drive partition when installing Windows for an **Intel® Optane™** system, that you leave at least a minimum of 5MB of unallocated space (note this is 5MB only, not GB).

- **After setting the SATA mode to Intel® Optane™** and installing the Intel® Rapid Storage Technology application, **DO NOT uninstall the Intel® Rapid Storage Technology application**.

- If you are reinstalling a system that has previously been setup in **Intel RST Premium mode**, **make sure you have cleared the Intel Optane Memory** (see “Clearing Intel® Optane™” on page 6 - 7). If you haven’t cleared the Optane setup you may not find a suitable hard disk drive partition on which to reinstall an operating system.

- If you need to reinstall an operating system, uninstall the IRST driver/application or swap the hard disk drive (or Intel® Optane™ SSD) **make sure you have cleared the Intel Optane Memory** (see “Clearing Intel® Optane™” on page 6 - 7).
Troubleshooting
Appendix A: Interface (Ports & Jacks)

Overview
The following chapter will give a quick description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
# Interface (Ports & Jacks)

## Notebook Ports and Jacks

<table>
<thead>
<tr>
<th>Item</th>

<tbody>
<tr>
<td>USB 3.1 (USB 3.1 Gen 2 Type C) Port</td>
<td>These USB ports are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device).</td>
</tr>
<tr>
<td>USB 3.0 (USB 3.1 Gen 1 Type A) Port</td>
<td>The USB 3.0 ports capable of 5Gbps (SuperSpeed) are classified as USB 3.1 Gen 1. There are three USB 3.1 Gen 1 (Type A) ports on this computer model. In addition there are two USB 3.1 Gen 2 ports (Type C) capable of 10Gbps SuperSpeed+ for a single device, or if two devices are plugged in to both USB 3.1 (Gen 2) ports, this bandwidth will be shared between the ports. Type C ports are the smaller sized USB ports, and the larger USB Type A ports are denoted by their blue color.</td>
</tr>
<tr>
<td>Powered USB 3.0 (USB 3.1 Gen 1 Type A) Port</td>
<td>Note: The powered USB 3.0 port may be toggled on/off by means of the Fn + Power Button key combination. When the powered USB port is on it will supply power (for charging devices only, not for operating devices) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices - see page 7 - 11). Toggle power to this port by using Fn + power button. Note: This function is designed to help charge USB compliant devices, but is not designed to allow their operation. Note: The maximum amount of current supplied by USB Type-C ports is 500 mA for USB2.0/900 mA for USB 3.1</td>
</tr>
</tbody>
</table>
Appendix B: Control Center & Flexikey®

Overview

The following chapter will give a quick description of the functions of the Control Center & Flexikey® applications.

Control Center

The Control Center gives quick access to frequently used controls, power management features and enables you to quickly turn modules on/off. Click the Control Center icons to toggle the appropriate function, or hold the mouse button down and move the dial control where applicable. Certain functions will automatically be adjusted when a power mode is selected. The Control Center in Windows 10 works under the Desktop app and not under the Start screen.

Flexikey®

The Flexikey® application is a quick hotkey configuration application, which allows you to assign a single key to launch multiple key combinations, or to launch programs and applications, to create text macros and to disable certain keys. The application can also be used to configure the mouse buttons to create hotkeys for gaming etc. All the configuration settings are retained under (up to 12) profiles to which the settings are applied. Click Flexikey® in the Gaming section of the Control Center, or the click the icon in the notification area of the taskbar, to launch the application.
Control Center & Flexikey®

Control Center Access

To run the Control Center press the **Fn + Esc** key combination, or double-click the icon in the notification area of the taskbar. Close the Control Center by clicking the close icon in the top right of the panel (move the cursor onto the top right corner of the panel to highlight it).

Flexikey® Access

The Flexikey® is accessed from within the Control Center by clicking **Flexikey®** in the **Gaming** section of the Control Center.

*Figure B - 1 - Control Center & Flexikey®*
**Power Modes**

You can set a **Power Mode** by clicking the appropriate icon at the top of the **Control Center**. Each power mode will affect the Power Conservation Mode, Airplane Mode, Power Plan and PC camera power etc.

You can click a **Control Center** icon to set an overall power mode and then click individual icons in the **Control Center** to power on/off the Touchpad and PC camera.

*Table B - 1- Power Modes*
Control Center Menus
The Control Center contains 3 menu headings (System Program, Device and Gaming) under the Power Modes. Click the menu headings and then click any of the buttons outlined on the following pages.

Display Utility
The Display Utility icon will only appear in the System Program menu if your display's resolution is QHD (2560 * 1440) or above.

The Display Utility allows you to adjust text size on the screen to make it easier to view (see page B - 8).

The System Program will display an arrow icon at the bottom right of the menu which you can click to allow you to access the second page of the menu containing the Time Zone item.

Figure B - 2 - Control Center Menus
Control Center & Flexikey®

Power Status (System Program)
The **Power Status** icon will show whether you are currently powered by the battery, or by the AC/DC adapter plugged in to a working power outlet. The power status bar will show the current battery charge state.

Brightness (System Program)
The **Brightness** icon will show the current screen brightness level. You can use the slider to adjust the screen brightness or the **Fn + F8/F9** key combinations, or use the **Fn+ F2** key combination to turn off the LED backlight (press any key to turn it on again).

Volume (System Program)
The **Volume** icon will show the current volume level. You can use the slider to adjust the Volume or the **Fn + F5/F6** key combinations, or use the **Fn+ F3** key combination to mute the volume.

Fan Speed (System Program)
You can set the fan speed to **Maximum (full power)**, **Automatic**, **Custom or Overclock** from this menu item. The fan speed will adjust itself automatically to control the heat of the CPU. However you can adjust the setting to maximum if you prefer..

![Custom Settings](image)

- **Custom Settings**
  - Click **Save** to retain customized settings, or **Reset** to select default settings.
Control Center & Flexikey®

Power Conservation (System Program)
This system supports Power Saving power management features that place computers (CPU, hard drive, etc.) into a low-power sleep modes after a designated period of inactivity (see “Power Conservation Modes” on page 3 - 13). Click either the Performance, Balanced or Power Saving button.

Sleep Button (System Program)
Click either the Hibernate or Sleep buttons to have the computer enter the selected power-saving mode (see “Power-Saving States” on page 3 - 8).

Desktop Background (System Program)
Clicking the Desktop Background button will allow you to change the desktop background picture.

Display Switch (System Program)
Click the Display Switch button to access the menu (or use the + P key combination) and select the appropriate attached display mode.

Time Zone (System Program)
Clicking the Time Zone button will access the Date and Time Windows control panel.

Display Utility (System Program for High Definition displays only)
The Display Utility button will only appear in the menu for QHD (2560 * 1440) or above displays (see page B - 8).
TouchPad/Camera (Device)
Click either of these buttons to toggle the TouchPad or camera module’s power status. The icon will appear dimmed when it is off. Note that the power status of the camera module is also affected by the Power Mode selected (see Table B - 1, on page B - 3).

Backlight Keyboard - Enter Sleep Timer (Device)
Enable and then select the amount of time the system is idle before the keyboard LED enters sleep mode (i.e. the LED keyboard illumination will turn off to save power).

Caps Lock/Scroll Lock/ Number Lock/Airplane Mode
Click the button to toggle the appropriate lock mode and Airplane Mode.

Left Windows Key (Gaming)
Click Disable to disable the Windows Key on the left side of the keyboard. This may be useful if you are using the gaming keys (W, A, S & D) and wish to avoid accidentally triggering menus with the Windows Key.

Headphone (Gaming)
The headphones may be set for different effects using this menu.

Flexikey® (Gaming)
Click the button to access the Flexikey® application.
Control Center & Flexikey®

Display Utility (System Program for High Definition displays only)
The Display Utility icon will only appear in the System Program menu if your display’s resolution is QHD (2560 * 1440) or above. The Display Utility allows you to adjust text size on the screen to make it easier to view.

The initial screen will display the default Express settings as indicated below.

![Figure B - 3 - Display Utility - Express Settings](image)

Click Save to retain the settings, and you will then need to sign out of the computer, and sign back in again, to adjust the settings. Note that you must save any open files and close open programs before signing out in order not to lose any work.

B - 8 Overview
Click **Advanced** to adjust the settings to adjust the overall DPI scaling to your requirements, or you can also click on the items (**Icons**, **Title Bars**, **Message Boxes**, **Menus**, **Tool Tips & Palette Titles**) in the lower half of the screen to customize the text size.

![Figure B - 4 - Display Utility - Advanced Settings](image)

Click **Save** to retain the settings, and you will then need to sign out of the computer, and sign back in again, to adjust the settings. **Note that you must save any open files and close open programs before signing out in order not to lose any work.**

Any changes made to the individual text size items are linked to the overall **DPI Scaling** selected. If you change the **DPI scaling**, the customized text size changes will become grayed out and will only become available again after you have signed out of the computer, and signed back in again.
Control Center & Flexikey®

The **System Program** will display an arrow icon at the bottom right of the menu which you can click to allow you to access the second page of the menu containing the Time Zone item.

*Figure B - 5 - Time Zone (if Display Utility is Included)*
Flexikey® Application

Click the button  in the Control Center, or the click the icon  in the notification area of the taskbar, to access the Flexikey® application.

Profiles

The menus on the left side of the application relate to Profiles. You can Add or Delete Profiles (you can maintain 12 active Profiles), Export and Import profiles from the menus. If you double-click on a Profile you can change the Profile Name, and change an Image file (images created using PNG files).

Windows Key & P Key

Note that you can assign actions to any keyboard key except the Windows key and P key.

Figure B - 6 - Flexikey® - Profiles
Control Center & Flexikey®

Flexikey® Application Features

- **EXPRESS KEY** - This feature allows you to configure a single key to send multiple key combinations or to create more useful shortcut keys. This is useful in gaming or when using applications which have a complex set of keyboard shortcuts.
- **LAUNCH APP** - This simply assigns single keys to launch any program’s or application’s executable file.
- **EXPRESS TEXT** - With this you can assign single keys to send commonly used strings of text.
- **DISABLE** - Use this function to disable any keyboard keys.
- **STATISTICS** - Use this to quickly record keys in use in any application, and to disable unused keys.

Keyboard and Mouse Settings

Click **Enable** to create settings for the keyboard and/or mouse by clicking the button on the top left of the screen (e.g. you may wish to create a profile with settings only for the mouse or keyboard). Clicking on the keyboard or mouse icons will allow you to access the settings page for the either the keyboard or mouse.

![Figure B - 7 - Enable Keyboard & Mouse / Language Selection](image)

Language Interface

You can change the language interface by right-clicking the **icon** in the notification area of the taskbar and selecting the language from the menu.
Enabling or Disabling Flexikey®

You can enable or disable Flexikey® (and therefore any hotkeys or mouse profile functions currently in use) by using the **Fn + Backspace** key combination. Pressing this key combination will toggle you between the currently selected keyboard or mouse profile to the standard keyboard and/or mouse settings, and back again.

*Use **Fn + Backspace** to enable or disable Flexikey®*

*Figure B - 8 - Enable/Disable Flexikey®*

The icon Flexikey® icon in the notification area of the taskbar will appear grayed out when Flexikey® is off, and in color when on (an on screen icon will also pop-up to display the status of the application as it is toggled on/off).

*Figure B - 9 - Taskbar Notification Area Icons*
Keyboard Settings
The keyboard settings allow you to configure actions for any single key (or a combination of keys). Click the key and then select the Action Type (Express Key, Launch App, Express Text or Disable) from the menu at the bottom of the page. You can rename the action by clicking in the Name box, and click in Tool Tips to type in a note to remind you of the action’s function.

Figure B - 10 - Key Configuration

Windows Key & P Key
Note that you can assign actions to any keyboard key except the Windows key and P key.
Mouse Settings
When an external mouse is attached, the mouse settings allow you to configure actions for the left 1, right 2 and middle 3 buttons of the attached mouse, and also for any backward 4 and forward 5 buttons if applicable (on a gaming type mouse). Click the button number and then select the Action Type (Express Key, Launch App, Express Text or Disable) from the menu at the bottom of the page. You can rename the action by clicking in the Name box, and click in Tool Tips to type in a note to remind you of the action’s function.

Figure B - 11 - Mouse Configuration
Keyboard Settings - Express Key

To configure a single key to send multiple key combinations, or to create more useful shortcut keys, use Express Key.

1. **Enable** and select the keyboard under your chosen profile, click on a key to select it, and then click to select Express Key in **Action Type**.
2. In the following example we want to change an existing game key configuration which uses the left shift key for sprinting, and the \textit{W} key for moving forwards, to use the \textit{left Ctrl} key to combine this movement to sprint forward.
3. Click on the chosen key for the shortcut action.
4. Click in the **Tool Tips** field and type to give the key combination a name e.g. “\textit{Sprint Fwds}”, then click back in the Name field (to avoid adding the recorded keys to the Tool Tips name).
5. Click **Start Record** and then press the key or keys (in this case we will press Left Shift and W) required (make sure you press the key(s) required and do not click on them).
6. Click **Stop Record** to complete the process.

*Figure B - 12- Express Key Record Key Combination*
7. Click **Save** to save the settings within your chosen profile.
8. If you want to remove any individual key click to select it, and then click **Delete**.
9. If you want to clear all the settings click **Restore** to return to the default key setting.
10. Any assigned **Express Keys** will appear in **orange**.

*Figure B - 13 - Key Combination Set*

*Tool Tips*

The Tool Tips field allows you to type a note to remind yourself of the function you have programmed the key for under any Profile.
Enabling Time Record
If you want to create a delay between key presses within the key combination, then you can use Time Record function to do so.

1. **Enable** and select the keyboard under your chosen profile, click to select a key for the shortcut action, and then click to select Express Key in Action Type.
2. Click in the Tool Tips field and type to give the key combination a name, then click back in the Name field (to avoid adding the recorded keys to the Tool Tips name).
3. Click Start Record and then press the key or keys required in the sequence and time delay between key presses required (make sure you **press the key(s) required** and do not click on them).
4. Click Stop Record.
5. Click to select a key in the sequence and click **Enable Time Record** , then click a key to view the time delay.

*Figure B - 14 - Enable Time Record*
6. You can edit the delay between key presses by clicking in the **Delay Time (MS)** field and typing a new number for the delay between the key presses.

![Figure B - 15 - Time Record Between Key Presses](image)

7. Click **X** to close the Time Record window.
8. Click **Save** to save the settings within your chosen profile.
9. If you want to remove any individual key click to select it, and then click **Delete**.
10. If you want to clear all the settings click **Restore** to return to the default key setting.
Keyboard Settings - Launch App

You can configure keys to launch any application or program as follows:

1. **Enable** and select the keyboard under your chosen profile, click to select a key to launch the application, and then click to select **Launch App** in **Action Type**.
2. Click **Browse...** at the bottom right of the application window.

![Figure B - 16 - Keyboard - Launch App (Browse to Executable File)](image-url)
3. Navigate to the executable file of the application and click **Open**.
4. The key will now be configured to open the selected application under your chosen Profile, and the key will appear in **green**.

![Keyboard Settings - Launch App B](image)

*Figure B - 17 - Key Set to Launch App*

5. If you want to remove any **Launch App Key**, select it and click on **Restore**.
6. Click **Save** to save the settings within your chosen profile.
Keyboard Settings - Express Text

A single key can be set to send a string of text within any application using Express Text.

1. **Enable** and select the keyboard under your chosen profile, click to select a key, and then click to select **Express Text** in **Action Type**.
2. Click in **Start** key if required (the **Start** key is the key used to in your target program to open a text message), or you can leave it blank if you prefer.
3. Click in the **Click to type** field and type in your message.

Figure B - 18 - Keyboard - Express Text
4. Click in **Send** key if required (the **Send** key is the key used to in your target program to send a text message e.g the Enter key would be the most commonly used), or you can leave it blank if you prefer.
5. The key will now be configured to send the text message in the target program under your chosen Profile, and the key will appear in **blue**.
6. If you want to remove any **Express Text** key, select it and click on **Restore**.
7. Click **Save** to save the settings within your chosen profile.

---

### Copy & Paste Text

Note that some applications and games do not support copy and pasted text. Where this is the case, any text you may have copy and pasted in to the “Type to Text” field may not be displayed within the application. In this case you will need to type the text into the field instead.
Keyboard Settings - Disable

You can use the program to disable any keys not required.

1. **Enable** and select the keyboard under your chosen profile, click to select a key to disable, and then click to select **Disable** in **Action Type**.
2. The key will now be disabled.
3. If you want to enable the key again, select it and click on **Restore**.
4. Click **Save** to save the settings within your chosen profile.
5. The key will be disabled under your chosen Profile, and the key will appear in **Gray**.

*Figure B - 19 - Keyboard - Disable*
Mouse Settings - Express Key

To assign a mouse button click to send multiple key combinations (an external mouse must be attached), or to create more useful shortcut keys, use **Express Key**.

1. **Enable** and select the mouse under your chosen profile, click on a mouse button to select it, and then click to select **Express Key** in **Action Type**.
2. In the following example we will configure the central mouse wheel to combine the actions of **left shift** key for sprinting, and the **W** key for moving forwards in a game program.
3. Click on the central mouse wheel for the shortcut action.

![Figure B - 20 - Mouse - Express Key Record Key Combination (Mouse)](image)
4. Click in the Tool Tips field and type to give the key combination a name e.g. “Sprint Fwds”, then click back in the Name field (to avoid adding the recorded keys to the Tool Tips name).

5. Click Start Record and then press the key or keys (in this case we will press Left Shift and W) required (make sure you press the key(s) required and do not click on them).

6. Click Stop Record to complete the process.

7. Click Save to save the settings within your chosen profile.

8. If you want to remove any mouse setting click to select it, and then click Delete.

9. If you want to clear all the settings click Restore to return to the default mouse setting.

10. The mouse button for any assigned Express Keys will appear in orange.

**Enabling Time Record for Mouse Settings**

If you want to create a delay between key presses within the mouse click combination, then you can use Time Record function to do so in the same manner as that used for keyboard settings (see “Enabling Time Record” on page B - 18).
Mouse Settings - Launch App

You can assign a mouse button click to launch any application or program as follows:

1. **Enable** and select the mouse under your chosen profile, click on a mouse button to select it, and then click to select **Express Key** in **Action Type**.
2. Click **Browse...** at the bottom right of the application window.

![Figure B - 21 - Mouse - Launch App (Browse to Executable File)](image)
3. Navigate to the executable file of the application and click **Open**.
4. The mouse click will now be configured to open the selected application under your chosen Profile, and the button will appear in **green**.
5. Click **Save** to save the settings within your chosen profile.

*Figure B - 22 - Mouse Button Set to Launch App*
Mouse Settings - Express Text

A mouse button click can be set to send a string of text within any application using Express Text.

1. **Enable** and select the mouse under your chosen profile, click on a mouse button to select it, and then click to select Express Text in Action Type.
2. Click in Start key if required (the Start key is the key used to in your target program to open a text message), or you can leave it blank if you prefer.
3. Click in the Text Context field and type in your message.

*Figure B - 23 - Mouse - Express Text*
4. Click in **Send** key if required (the **Send** key is the key used to in your target program to send a text message e.g. the Enter key would be the most commonly used), or you can leave it blank if you prefer.
5. The mouse button click will now be configured to send the text message in the target program under your chosen Profile, and the button will appear in **blue**.
6. If you want to remove any **Express Text** mouse button, select it and click on **Restore**.
7. Click **Save** to save the settings within your chosen profile.
Mouse Settings - Disable

You can use the program to disable any mouse button clicks if not required.

1. **Enable** and select the mouse under your chosen profile, click on a mouse button to select it, and then click to select **Disable** in **Action Type**.
2. The button click will now be disabled.
3. If you want to enable the button again, select it and click on **Restore**.
4. Click **Save** to save the settings within your chosen profile.
5. The button click will be disabled under your chosen Profile, and the key will appear in **Gray**.

*Figure B - 24 - Mouse - Disable*
Statistics

The **Statistics** tab allows you to record keys used in any application, and to **disable** any infrequently, or unused, keys to save any accidental incorrect key presses.

1. Click the **Statistics** Tab, and press **Start Record** to start recording the frequency of key presses for keys used.
2. You can then go to the application you wish to use the profile for, and use the application as normal so that a standard set of keys used may be recorded.
3. Return to the Flexikey® application and press **Stop Record** to stop recording.
4. At the end of the recording process colors will represent the frequency of key presses, with red as the most frequent through to lighter blue the less frequent (the color bar at the bottom of the screen displays the color code against the number of key presses).
5. Under **Quick Disable** click the color which corresponds to the keys you wish to disable.
6. All disabled keys will then change to gray and will be disabled under this profile.

![Figure B - 25 - Statistics](image)
Appendix C: Video Driver Controls

Overview

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 35. The basic video features for this computer can be configured using the Intel(R) HD Graphics Control Panel, Windows Display Settings or NVIDIA control panel.

Video Card Options

Note that card types, specifications and drivers are subject to continual updates and changes. Check with your distributor/supplier for the latest details on video cards supported.

Configuring External Displays

When a single external display is attached to the HDMI or Display Ports, use the System (in Settings - page C - 7) control panel or the + P (or F n + F 7 - page C - 6) key combination, to configure the external display.

When multiple external displays are attached you should use the NVIDIA (page C - 25) control panel to configure the external displays.

You cannot configure external displays using the Intel(R) HD Graphics control panel.
Microsoft Hybrid Graphics

Most notebook computers come with either a **discrete** or **integrated** graphics solution.

**Discrete** graphics solutions feature a dedicated Graphics Processing Unit (GPU) which are capable of playing games, watching HD video or running GPU-based applications. However computers with discrete graphics solutions tend to be heavy in power consumption, and slightly larger in size in order to incorporate the dedicated discrete GPU.

**Integrated** graphics solutions usually feature memory sharing technology to help save power consumption and allow for longer battery life. However computers with integrated graphics solutions will not usually run games, HD video or GPU-based applications without severe limitations.

**Microsoft Hybrid Graphics** is a seamless switchable graphics technology designed to get best performance from the graphics system while allowing longer battery life, without having to manually change settings. Thus when an application is run that requires extra performance or quality, then the operating system will run the discrete GPU (dGPU); when the system does not require such enhanced performance it will let the integrated (iGPU) handle it.
How Switchable Technology works
When the system is powered up and is displaying just the desktop, the dGPU will be powered off. In this case the system is running in the same way as a system without a discrete graphics solution. However when an application that requires use of the dGPU is run (e.g, a game or HD Video), the dGPU is powered on and takes over the processing duties. If the program is closed, then the dGPU will be powered back down again until required.
Video Driver Controls

Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.
Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive and click Install Drivers (button).

Video (VGA)
1. Click 2. Install VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

NVIDIA Video (VGA)
1. Click 3. Install NVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click Restart Now to restart the computer.
5. After all the drivers have been installed (an internet connection is required) run the NVIDIA GeForce Experience by clicking the desktop icon (or App).
6. Restart the computer and run the application again after restart.

Video Card Options

Note that card types, specifications and drivers are subject to continual updates and changes. Check with your distributor/supplier for the latest details on video cards supported.
NVIDIA GeForce Experience

If you have a working internet connection (and you will need remain connected to the internet to run NVIDIA GeForce Experience) you can click the NVIDIA GeForce Experience desktop icon or App to run the application. This will optimize your gaming settings for your NVIDIA GPU by downloading the latest settings from the NVIDIA cloud data center.

You may need to create an NVIDIA account to log-in to the system (alternatively you may be able to use your Facebook or Google account to log-in).

After logging in to the system you can click through any on-screen instructions to update your settings and check for installed games etc.

By running the NVIDIA GeForce Experience you will be able to download the latest drivers to insure compatibility with games, power saving features and various other enhancements for your NVIDIA GPU (these features are subject to change and update so check with the NVIDIA website for the latest information).

Note that to enable BatteryBoost you must be connected to the internet.
Configure Other Displays Using Project

You can configure attached displays from Project.

1. Attach your display to the appropriate port, and turn it on.
2. Press the + P (or Fn + F7) key combination.
3. Click on any one of the options from the menu to select PC screen only, Duplicate, Extend or Second screen only.
4. You can also click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.
Configuring an External Display In Windows

The System Control Panel in Settings may be used to configure displays.

1. Attach your external display to the appropriate port, and turn it on.
2. Click the Start Menu and click Settings > System (or right-click the desktop and select Display settings).
3. You can Duplicate, Extend or choose to display on 1 screen only.
4. Click Apply to save any changes made.
5. Click Advanced display settings to access further options.

Figure C - 2
System > Display
Video Driver Controls

HDMI Audio Configuration

HDMI (High-Definition Multimedia Interface) carries both audio and video signals. In some cases it will be necessary to go to the Sound control panel and manually configure the HDMI audio output as per the instructions below.

1. Go to the Sound control panel.
2. Click Playback (tab)
3. The playback device will be selected.
4. You may need to select the audio device and click Set Default (button).
5. Double-click the device to access the control panel tabs.

Figure C - 3
Sound - HDMI Device (set Default)
6. Adjust the HDMI settings from the control panel tabs.
7. Click **OK** to close the **Sound** control panel.

**Figure C - 4**

HDMI Device Properties
Video Driver Controls

HDMI Notes
- Connect a device with HDMI support to the HDMI-Out port BEFORE attempting to play audio/video sources through the device.
- To play audio sources through your external display’s (TV or LCD) speakers you will need to go to the audio configuration control panel on the display and configure the audio input accordingly (see your display device manual).

HDMI Video Configuration
1. Connect an HDMI cable from the HDMI-Out port to your external display.
2. Configure your external display as per the instructions in this chapter.
3. Set up your external display (TV or LCD) for HDMI input (see your display device manual).
4. You can now play video/audio sources through your external display.

Other Applications
If you are using a third party application to play DVDs etc. from any attached DVD device, you will need to consult the application’s documentation to see the appropriate audio configuration (the application must support digital to analog translation).
Wireless Display

Wireless Display uses your Wireless LAN module/WLAN Bluetooth Combo module (you need to make sure that your video adapter/display device is compatible with your particular WLAN/Combo module) in conjunction with a compatible video adapter/display device (purchased separately) to allow you to display the contents of the notebook display on another display (e.g. HDTV), without the need to have cables stretching across a room.

You can use the wireless display to play games, browse the internet, display videos or photo slide shows on your TV/external display without using HDMI or A/V cables.

Before configuring Wireless Display you will need to set up your compatible adapter with your display/speakers. Connect the adapter using an HDMI or A/V cable and turn on the display (or in the case of speakers connect them to the wireless speaker adapter with the cables provided with the adapter), and then set the display to the appropriate input channel (see the documentation supplied with your compatible adapter/display for full details).

Note that no driver or application is required for wireless display in Windows 10.
Wireless Display Configuration

1. Note that no driver or application is required for wireless display in Windows 10.
2. Press the \+ P key combination.
3. Click **Connect to a wireless display** (see overleaf if this does not appear) at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

4. The system will then search for compatible display devices (**this may take up to 60 seconds** so allow time for this to complete).
5. Double-click any detected display device in the list.
6. You may then need to input a pin number for the device to which you are connecting and click **Next**.
7. The display will then connect (for specific settings for your display see the documentation supplied with your compatible adapter/display for full details).
8. Go to the **Project** menu and click **Disconnect** to temporarily disconnect from the wireless display.
9. To permanently disconnect from the display (you will need to go back through the connection process again) you can select it in **Devices** and click **Remove Device** > **Yes**.
NVIDIA Control Panel

More advanced video configuration options are provided in the NVIDIA Control Panel tab. Use the NVIDIA Control Panel to configure displays in Discrete mode.

1. Go to the Control Panel.
2. Double-click NVIDIA Control Panel (click to view the control panel in either Large icons or Small icons if you are in Category view).

Figure C - 6
NVIDIA Control Panel
The **NVIDIA Control Panel** provides additional video configuration controls and tools which allow quick access to features such as image settings, 3D Settings and video configuration.

**Navigating the Control Panel**

Navigate through the control panels in much the same way as you would a web page. Click on the sub-heading tasks in the left menu (and on the highlighted links) for information. Use the buttons on the top left to go back, forward etc.

*Figure C - 7*

**NVIDIA Control Panel**
Further menu items will appear in the NVIDIA Control Panel in **Discrete** mode, providing additional video configuration controls and tools which give access to features such as display configuration, 3D Settings etc.

*Figure C - 8*  
NVIDIA Control Panel
The **Help** menus provide index and search features, and direct links to the NVIDIA website etc.

*Figure C - 9*

**Help Menu**
Customization Options

One of the most important aspects of hybrid technology is that it will switch between the integrated GPU and discrete GPU seamlessly and automatically, and does not require any input from the user. However customization options are offered for users who prefer to set their own parameters for GPU usage.

Context Menu

One of the quickest ways to choose which GPU to use for a particular application is by using the “Run with graphics processor” in the context menu.

1. Go to the NVIDIA Control Panel.
2. Click Desktop from the top menu and select Add “Run with graphics processor” to Context Menu (it should have a check alongside it).
3. Close the NVIDIA Control Panel.
4. Find the executable file icon of the application you want to run.
5. Right-click the icon and select Run with graphics processor from the context menu.
6. Select either High-performance NVIDIA processor (dGPU) or Integrated graphics (iGPU) to run the program with the selected GPU.

Note the NVIDIA control panel refers to High-performance NVIDIA processor (which is the discrete GPU) and Integrated graphics (which is the integrated GPU).

Figure C - 11
Context Menu with Run with graphics processor

Right-click the application executable file
Global Settings

Global settings allows you to set the preferred graphics processor for overall use. Ideally this would be the iGPU for battery life, but this can be set to the dGPU if preferred.

1. Go to the NVIDIA Control Panel.
2. Click Manage 3D Settings (3D Settings) and select Global Settings (tab).
3. Select either Integrated graphics (iGPU) or High performance NVIDIA Processor (dGPU) from the drop-down menu.
4. Click the Setting menu items to select any options required.
5. Click Apply to save the settings.

Customization Options

Although hybrid technology is completely seamless to the user, there are customization options within the control panel (see page C - 17).
Program Settings
Program settings allows you to make specific adjustments for installed applications.

1. Go to the **NVIDIA Control Panel**.
2. Click **Manage 3D Settings (3D Settings)** and select **Program Settings** (tab).
3. **Select a program to customize** from the drop-down menu, or click **Add** to add any program that does not appear in the menu.
4. **Select the preferred graphics processor for the program** from the drop-down menu.
5. Click the **Setting** menu items to select any options required.
6. Click **Apply** to save the settings.

![Figure C - 13 Program Settings](image)
Video Driver Controls

**Change Resolution**

You can **Change Resolution** for your attached displays from the NVIDIA control panel.

1. Attach your external display to the appropriate port, and turn it on.
2. Go to the **NVIDIA Control Panel**.
3. Double-click **Display** (if the sub-menus are not visible), and then click **Change resolution**.
4. Click to select the display, and then adjust the settings from "2. **Choose the resolution.**" and "3. **Apply the following settings.**"
5. Click **Apply** to save the settings.

*Figure C - 14*  
Change Resolution
Display Devices - NVIDIA CP

Note that you can use an HDMI (High-Definition Multimedia Interface) cable connected to the HDMI-Out port and/or DisplayPort compatible cable connected to a DisplayPort 1.3 to connect an external display. See your external display device’s manual to see which formats it supports.

Configuring External Displays

When a single external display is attached to the HDMI or Display Ports, use the System (in Settings - page C - 7) control panel, or the + P (or Fn + F7 - page C - 6) key combination, to configure the external display.

When multiple external displays are attached you should use the NVIDIA (page C - 25) control panel to configure the external displays.

You cannot configure external displays using the Intel(R) HD Graphics control panel.
**Video Driver Controls**

### Table C - 1

#### Display Modes

<table>
<thead>
<tr>
<th>Display Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single</td>
<td>One of the connected displays is used as the display device</td>
</tr>
<tr>
<td>Clone</td>
<td>Clone simply shows an exact copy of the Primary display desktop on the other display(s). This mode will drive multiple displays with the same content</td>
</tr>
<tr>
<td>Extend</td>
<td>Extend treats connected displays as separate devices, and they act as a virtual desktop resulting in a large workspace. When enabled, you can drag any icons or windows across to the other display desktop. It is therefore possible to have one program visible in one display, and a different program visible in the other display</td>
</tr>
</tbody>
</table>

---

**Sound Blaster Audio & HDMI Connection**

Note that Sound Blaster audio will be disabled when you are connecting to an external display through an HDMI connection.
Configuring an External Display (NVIDIA)

Clone the External Displays
1. Attach your external displays to the appropriate ports, and turn them on.
2. Go to the NVIDIA Control Panel.
3. Double-click Display (if the sub-menus are not visible), and then click Set up multiple displays.
4. Any attached display will appear under “1.Select the displays you want to use.”
5. Click the check box alongside any display you wish to use.
6. Click Apply > Yes to save any changes made (the Apply button will appear in the bottom right of the control panel when changes have been made).

Display Not Shown
If the attached display does not appear in the “1.Select the displays you want to use.” window, click “My Display is not shown...” and then click the appropriate button to force detection of the missing display.

HDMI Audio Setup
See “HDMI Audio Configuration” on page C - 8 for instructions on configuring audio for HDMI display devices.
Extending the Display
1. Attach your external displays to the appropriate ports, and turn them on.
2. Go to the NVIDIA Control Panel.
3. Double-click Display (if the sub-menus are not visible), and then click Set up multiple displays.
4. Click to select a primary display under “1. Select the displays you want to use.”
5. Right-click the icons under “2. Drag the icons to match ....” and select Extend.

Changing the Primary Display on Extended Displays
If you want to switch the primary display if the displays are extended then right-click the secondary display icon and select “Make Primary”. Click Apply > Yes to save the change (see over).
6. The Primary display (the main window display) will be denoted by an asterisk * in the top right corner of the icon.
7. To change the Primary display right-click the icon and select Make primary.
8. Click Apply > Yes to save any changes.

![Figure C - 17 Switch Primary Display](image)
9. You can drag the icons to match the desktop layout you want to use (e.g. you may want to extend the display to the right or left of the primary display).
10. Click **Apply > Yes** to save any further changes.

![Drag Display Icons](image)

**Figure C - 18**
Drag Display Icons

Drag the display icons to match the layout you want to use.
HDCP Status

If your external display is HDCP (High Bandwith Digital Content protection) compatible then the NVIDIA control panel will display the HDCP system status.

Figure C - 19
HDCP Status
Video Driver Controls

Adjust Video Settings

You can adjust video color and image settings from the Video sub-menus.

1. Go to the NVIDIA Control Panel.
2. Click “+” next to Video if its sub-items are not shown and then click either Adjust video color settings or Adjust video image settings.
3. Make any adjustments required for any display and click Apply to save the settings.

Figure C - 20
Adjust Video Color Settings

C - 30 Adjust Video Settings
Configure Surround, PhysX®

NVIDIA® PhysX® is a physics engine that can use the GPU to accelerate game and 3D application performance. You can select the GeForce video card or CPU as a PhysX® processor, or configure the computer to auto-select a PhysX® processor (recommended default setting).

1. Go to the NVIDIA Control Panel.
2. Click Configure Surround, PhysX.
3. Click to select a processor from the menu (PhysX Settings); Auto-select (recommended) is the default setting.
4. Click Apply to save the settings.

Figure C - 21
Configure Surround, PhysX
Set Digital Audio

As HDMI (High-Definition Multimedia Interface) carries both audio and video signals you can configure the audio output from the NVIDIA control panel and Sound control panel. The settings will depend upon the external HDMI display to which you have connected.

Connected displays will appear alongside the appropriate port. Click “Open Windows Sound Settings” (button) to access the Sound control panel.

Figure C - 22
Set up Digital Audio
Intel® HD Graphics Control Panel

Advanced video configuration options are provided by the Intel® HD Control Panel. Use the Intel® HD Control Panel to configure displays in Hybrid mode. To access the control panel see below and overleaf:

1. Right-click the Desktop and select Intel(R) Graphics Settings from the menu.

OR

2. Click the icon in the notification area of the Desktop taskbar and select Intel(R) Graphics Settings from the menu.
Video Driver Controls

3. Double-click the Intel(R) HD Graphics control panel in the Windows Control Panel.

---

Figure C - 25
Control Panel
Intel® Graphics Settings
You may make changes to any of the graphics properties by clicking the appropriate menu panel and adjusting the settings from the menus.

Click the Home button to return to the main menu screen in any of the sub-menu screens.

Figure C - 26
Intel® HD Graphics Control Panel
Video Driver Controls

Display
Click either **Display Settings** or **Color Settings** to make display adjustments.

Configuring External Displays
When a single external display is attached to the HDMI or Display Ports, use the **Display** (page C - 7) or **System** (in **Settings** - page C - 7) control panels, or the **+ P** (or **Fn + F7** - page C - 6) key combination, to configure the external display.

When multiple external displays are attached you should use the **NVIDIA** (page C - 25) control panel to configure the external displays.

You cannot configure external displays using the Intel(R) HD Graphics control panel.
The **Custom Resolutions** sub-menu allows you to adjust the display (or any attached display) to any width, height, refresh rate, color depth and underscan percentage of your choice. Note that incorrect settings can cause system instability and even possible component damage, so this is adjusted at your own risk.

*Figure C - 28 Intel® HD Graphics Control Panel Display Settings - Custom Resolutions*
Video Driver Controls

3D
This menu allows you to choose how 3D images are displayed. **Performance** gives the smoothest motion of images, **Quality** displays the most detail, **Balanced Mode** provides better computer performance with good quality and **Custom** allows you to configure the **Anisotropic Filtering** and **Vertical Sync** and features to your preferences. Click **Apply** to save changes.

*Figure C - 29*
Intel® HD Graphics Control Panel 3D
Options and Support
Hot Key Manager in Options and Support allows you to create hot keys for opening the application, rotating the display, scaling etc. Click Apply to save changes.
Click the **Options** menu at the top of the screen to display the sub-menus. The **Information Center** provides details on **System Information**, the **Built-In Display** and any **attached displays**.

**Figure C - 31**

**Intel® HD Graphics Control Panel**

**Options - Information Center**
The **Video** menu allows you to brighten or darken movies, or to switch to vivid colors. The **Preview** image will display a sample image using the current settings. You can **Save Profile** and name the Profile to recall the settings at any time. Click **Apply** to save changes (select **Color Enhancement**, **Image Enhancement**, **Image Scaling** or **Gamut Mapping** from the menu).

*Figure C - 32*

Intel® HD Graphics Control Panel - Video (Color Enhancement)
Click the **Video** menu at the top of the screen to display the sub-menus. The **Image Enhancement** menu allows you to adjust the **Sharpness**, **Skin Tone Enhancement**, **Noise Reduction**, **Contrast Enhancement** and **Film Mode Detection**. Click **Apply** to save changes.

*Figure C - 33*  
Intel® HD Graphics Control Panel - Video (Image Enhancement)
Power
The battery life can be extended through dynamic control of the frame rate if Extended Battery Life for Gaming is enabled. Settings can be selected for when the system is powered by battery or is plugged in.

Figure C - 34
Intel® HD Graphics Control Panel - Power
Profiles
You can select one of the preset profiles (Brighten Video, Darken Video and Enhance Video Colors) from the menu on the left. Alternatively you can go through the menus to make adjustments to your preferences for Display, Color, Video, Options and Support and Power (tick any boxes for the settings required), and then Save the settings to a profile (which may be imported or exported).
Appendix D: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer's release schedule. Check with your distributor/supplier for details.

Note that this computer model series may support a range of CPUs and/or video adapters.

To find out which CPU is installed on your system go to the Start menu and select Settings, and then select System and click About. This will also provide information on the amount of Installed RAM etc.

To get information on your system’s video adapter go to the Start menu and select Settings, and then select System and click Display > Advanced display settings > Display adapter properties.
# Specifications

## Core Logic
- Mobile Intel® HM175 Express Chipset

## Display
- 15.6" / 39.62cm, 16:9, 3.2mm Thick
- Backlit Panel
- UHD (3840 * 2160) / FHD (1920 * 1080)

## Memory
- Dual Channel DDR4
  - Two 260 Pins SO-DIMM Sockets Supporting DDR4 2400 MHz
  - Memory Expandable from 8GB to 32GB
  - Compatible with 4GB, 8GB or 16GB Modules

## Storage
- One Changeable 2.5" / 7.0 mm (h) HDD / SSD with SATA (Serial) Interface
- One M.2 2280 SSD, PCIe Gen 3*4 / SATA Interface - **(Factory Option)**

## Audio
- High Definition Audio Interface
- S/PDIF Digital Output
- Built-In Array Microphone
- Two Built-In 2W Speakers
- ANSP™ 3D Sound Technology on Headphone Output
  - **For Model A:**
    - Sound Blaster® X® Pro-Gaming 360°
  - **For Model B:**
    - Sound Blaster® Cinema 3

## Pointing Device & Keyboard
- Built-in Secure pad OR Touchpad with Microsoft PTP Multi-Gesture and Scrolling Functionality - **(Factory Option)**
- WASD Gaming Keys
- Full Size Color Illuminated LED Keyboard with Numeric Pad

## Interface
- *Two USB 3.1 Gen 2 Ports (Type C)*
- Three USB 3.0 Ports (USB 3.1 Gen 1, including 1 AC/DC Powered USB Port)
- Two Mini DisplayPorts 1.3
- One HDMI-Out (High-Definition Multimedia Interface) Port (with HDCP)
- One 2-in-1 Audio Jack (Headphone / S/PDIF optical output)
- One Microphone-In Jack
- One Line-Out Jack
- One RJ-45 LAN Jack
- One DC-In Jack

*Note: The maximum amount of current supplied by USB Type-C ports is 500 mA for USB 2.0/900 mA for USB 3.1

## Card Reader
- *Embedded Multi-In-1 Card Reader*
  - MMC/ RS MMC
  - SD/ Mini SD / SDHC/ SDXC up to UHS-II

*Note: Some of these cards require adapters, which are usually supplied with the cards.*

### SO-DIMM Memory Types
All SO-DIMM memory modules installed in the system should be identical (the same size and brand) in order to prevent unexpected system behavior.
### Slot

**Two OR Three** M.2 Card Slots

- **Slot 1** for M.2 2230 WLAN Combo Module with PCIe & USB Interfaces (A Key)
- **Slot 2** for M.2 2280 SSD (Solid State Drive) Card with SATA / PCIe Gen 3*4 Interface (M Key)
- **(Factory Option) Slot 3** for LTE or UTMS/HSPA (3G/4G Module) + M.2 3042 Card with USB Interface (B Key)

### Communication

- Built-In 10/100/1000Mb Base-TX Ethernet LAN
- 2.0M FHD PC Video Camera Module
- Intel® Dual Band Wireless-AC 8265 (2*2 802.11 a/c) M.2 WLAN + Bluetooth Combo M.2 2230 Module (Factory Option)
- Intel® Dual Band Wireless-AC 3168 (1*1 802.11 ac) WLAN + Bluetooth Combo M.2 2230 Module (Factory Option)
- Qualcomm® Atheros Killer™ Wireless-AC 1535 Dual Band (2*2 802.11 ac) WLAN + Bluetooth Combo M.2 2230 Module (Factory Option)
- 3G UTMS/HSPA+ M.2 3042 Card Module (Factory Option) OR
- 4G LTE M.2 3042 Card Module (Factory Option)

### Power Management

Supports Wake on LAN
Supports Wake on USB (AC Mode Only)
Supports Wake on RTC Alarm (AC Mode Only)

### Power & Battery

**For Model A - Design I & Model B:**
Full Range AC/DC Adapter AC input 100 - 240V, 50 - 60Hz, DC Output 19V, 7.89A (150 Watts)

**OR**

**For Model A - Design II:**
Full Range AC/DC Adapter AC input 100 - 240V, 50 - 60Hz, DC Output 19.5V, 9.23A (180 Watts)

### Embedded 4 Cell Polymer Battery Pack
55WH

### Security

- Security (Kensington® Type) Lock Slot
- BIOS Password
- Trusted Platform Module 2.0 (Factory Option)
- Intel® PTT for Systems Without TPM
- Area Finger Print Reader (Factory Option)

### Features (For Some Model Designs)

- Metallic Finish
- Shipping Mode
- FlexiCharger
- Virtual Reality Reader
- Supports Windows® 10 Cortana with Voice
- USB Drive (Factory Option)
- Intel® Optane™

These features apply to some individual model designs within this series (check with your distributor/supplier for details)

### Operating System

Windows® 10 (64-bit)

### Dimensions & Weight

**Model A:**
380mm(w) * 252mm(d) * 18.6mm(h)  
1.95kg *Barebone System with 55WH Battery

**Model B:**
380mm(w) * 255mm(d) * 18.6mm(h)  
1.95kg *Barebone System with 55WH Battery

*A barebone system does not include the HDD, RAM, adapter, power cord and factory option modules (weight tolerance within +/- 5%).
