Trademarks

Intel, Pentium and Intel Core are trademarks/registered trademarks of Intel Corporation.
Preface

R&TTE Directive
This device is in compliance with the essential requirements and other relevant provisions of the R&TTE Directive 1999/5/EC.

This device will be sold in the following EEA countries: Austria, Italy, Belgium, Liechtenstein, Denmark, Luxembourg, Finland, Netherlands, France, Norway, Germany, Portugal, Greece, Spain, Iceland, Sweden, Ireland, United Kingdom, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Slovakia, Poland, Slovenia.

ErP Off Mode Power Consumption Statement:
The figures below note the power consumption of this computer in compliance with European Commission (EC) regulations on power consumption in off mode:

- Off Mode < 0.5W
CE Marking
This device has been tested to and conforms to the regulatory requirements of the European Union and has attained CE Marking. The CE Mark is a conformity marking consisting of the letters “CE”. The CE Mark applies to products regulated by certain European health, safety and environmental protection legislation. The CE Mark is obligatory for products it applies to: the manufacturer affixes the marking in order to be allowed to sell his product in the European market.

This product conforms to the essential requirements of the R&TTE directive 1999/5/EC in order to attain CE Marking. A notified body has determined that this device has properly demonstrated that the requirements of the directive have been met and has issued a favorable certificate of expert opinion. As such the device will bear the notified body number 0560 after the CE mark.

The CE Marking is not a quality mark. Foremost, it refers to the safety rather than to the quality of a product. Secondly, CE Marking is mandatory for the product it applies to, whereas most quality markings are voluntary.
Preface

FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re orient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the service representative or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

Warning

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit according to the model’s requirements:
   - Full Range AC/DC Adapter - AC Input of 100 - 240V, 50 - 60Hz, DC Output of 19V, 3.42A (65 Watts) minimum AC/DC Adapter.

This Computer's Optical Device is a Laser Class 1 Product
Instructions for Care and Operation
The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don’t drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

   ![Do not expose the computer to any shock or vibration.](image1)
   ![Do not place it on an unstable surface.](image2)
   ![Do not place anything heavy on the computer.](image3)

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

   ![Do not expose it to excessive heat or direct sunlight.](image4)
   ![Do not leave it in a place where foreign matter or moisture may affect the system.](image5)
   ![Don’t use or store the computer in a humid environment.](image6)
   ![Do not place the computer on any surface that will block the Vents/Fan Intakes.](image7)
3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

5. **Take care when using peripheral devices.**

   | Do not turn off the power until you properly shut down all programs. | Do not turn off any peripheral devices when the computer is on. | Do not disassemble the computer by yourself. | Perform routine maintenance on your computer. |
   | Do not turn off the power until you properly shut down all programs. | Do not turn off any peripheral devices when the computer is on. | Do not disassemble the computer by yourself. | Perform routine maintenance on your computer. |

   Use only approved brands of peripherals.  
   Unplug the power cord before attaching peripheral devices.
Servicing

Do not attempt to service the computer yourself. Doing so may violate your warranty and may expose you and
the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from
the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

• When the power cord or AC/DC adapter is damaged or frayed.
• If the computer has been exposed to rain or other liquids.
• If the computer does not work normally when you follow the operating instructions.
• If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
• If there is an unusual odor, heat or smoke coming from your computer.

---

Bottom Cover Removal Warning

Do not remove any cover(s) and /or screw(s) for the purposes of device upgrade as this may violate the terms of your war-
 ranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/ supplier for further information.

Removal Warning (For Service Personnel)

When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and
screw(s) before restoring power to the system.
Also note the following when the cover is removed:
• Hazardous moving parts.
• Keep away from moving fan blades.
Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

| Do not plug in the power cord if you are wet. | Do not use the power cord if it is broken. | Do not place heavy objects on the power cord. |

**Power Safety Warning (For Service Personnel)**

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord).

You must also remove your battery in order to prevent accidentally turning the machine on. Before removing the battery disconnect the AC/DC adapter from the computer.
Preface

**Polymer/Lithium-Ion Battery Precautions**

Note the following information which is specific to Polymer/Lithium-Ion batteries only, and where applicable, this overrides the general battery precaution information overleaf.

- Polymer/Lithium-Ion batteries may experience a slight expansion or swelling, however this is part of the battery’s safety mechanism and is not a cause for concern.
- Use proper handling procedures when using Polymer/Lithium-Ion batteries. Do not use Polymer/Lithium-Ion batteries in high ambient temperature environments, and do not store unused batteries for extended periods.
- If you are working in areas of low temperature use the AC/DC adapter to power the computer.

See also the general battery precautionary information overleaf for further information.
Preface

General Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not remove any batteries from the computer while it is powered on.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- If you do not use the battery for an extended period, then remove the battery from the computer for storage.
- Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Cleaning Instructions
(For Computer Models Supplied with Light Blue Cleaning Cloth)
Some computer models in this series come supplied with a light blue cleaning cloth. To clean the computer case with this cloth follow the instructions below:

1. Power off the computer and peripherals.
2. Disconnect the AC/DC adapter from the computer.
3. Use a little water to dampen the cloth slightly.
4. Clean the computer case with the cloth.
5. Dry the computer with a dry cloth, or allow it time to dry before turning on.
6. Reconnect the AC/DC adapter and turn the computer on.
Preface

Travel Considerations
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it’s latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vents/Fan Intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intakes while the computer is in use.
On the Road

In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

Hand-carry the notebook - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

Beware of Electromagnetic fields - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). Note: Some airports also scan luggage with these devices.

Fly safely - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

Get power where you can - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

Keep it dry - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Preface

Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

Remember to:
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Lighting
Proper lighting and comfortable display viewing angle can reduce eye strain and muscle fatigue in your neck and shoulders.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

LCD Screen Care
To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

- Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
- Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
- Rotate desktop background images every few days.
- Turn the monitor off when the system is not in use.

LCD Electro-Plated Logos
Note that in computers featuring a raised LCD electro-plated logo, the logo is covered by a protective adhesive. Due to general wear and tear, this adhesive may deteriorate over time and the exposed logo may develop sharp edges. Be careful when handling the computer in this case, and avoid touching the raised LCD electro-plated logo. Avoid placing any other items in the carrying bag which may rub against the top of the computer during transport. If any such wear and tear develops contact your distributor/supplier.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- **Chapter 2** A guide to using some of the main features of the computer e.g. the **storage devices** (hard disk & card reader), **Touchpad** & **Mouse** and **Audio**.
- **Chapter 3** The computer’s **power** saving options.
- **Chapter 4** The installation of the **drivers** and utilities essential to the operation or improvement of some of the computer’s subsystems.
- **Chapter 5** An outline of the computer’s built-in software or **BIOS** (Basic Input Output System).
- **Chapter 6** A quick guide to the computer’s **PC Camera**, **Wireless LAN**, **Fingerprint Reader**, **4G**, **Bluetooth**, **Trusted Platform (TPM)** and **Intel** modules (some of which may be optional depending on your purchase configuration).
- **Chapter 7** A **troubleshooting** guide.
- **Appendix A** Definitions of the **interface, ports/jacks** which allow your computer to communicate with external devices.
- **Appendix B** Information on the **Control Center**.
- **Appendix C** Information on the **video driver controls**.
- **Appendix D** The computer’s **specification**.
- **Appendix E** A guide to the **Docking Station**.
Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1 and “BIOS Utilities” on page 5 - 1 in the reminder of the User’s Manual. You may also find the notes marked with a of interest to you.

Beginners and Not-So-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in the Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the symbol. Also please note the safety and handling instructions as indicated in the Preface.
Not Included

Operating Systems (e.g. Windows 10) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers

If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in “Drivers & Utilities” on page 4 - 1. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you); refer to Chapter 4 for installation instructions.

Ports and Jacks

See “Notebook Ports and Jacks” on page A - 2 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
System Startup

1. Remove all packing materials, and place the computer on a stable surface.
2. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
3. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   - Attach the AC/DC adapter cord to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and **leave it there for 6 seconds or longer**.
   - Remove the adapter cord from the computer’s DC-In jack, and then plug it back in again; the battery will now be unlocked.
4. Use one hand to raise the lid/LCD to a comfortable viewing angle (**do not exceed 180 degrees** - or **130 degrees if the system is docked to the docking station or has a 9 cell battery inserted**); use the other hand to support the base of the computer (**Note: Never** lift the computer by the lid/LCD).

**Shutdown**

Note that you should always shut your computer down by choosing the **Shut Down** command in **Windows** (see page 1 - 34). This will help prevent hard disk or system problems.

**Figure 1 - 1**

**Opening the Lid/LCD**

**LCD Open Angle**

The LCD may be opened to 180 degrees, however if the 9 cell battery is inserted, or the computer is docked to the docking station, the angle should not exceed 130 degrees.
System Software

Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find the Windows 10 (64-bit) operating system is supported.

Windows OS

Note that the information included on the following pages is for Windows 10 only.

In order to run Windows 10 (64-bit) your computer requires a minimum 4GB of system memory (RAM).
1. Built-In PC Camera (Optional)
2. PC Camera LED
3. Built-In Array Microphone
4. LCD
5. Power Button
6. Keyboard
7. Touchpad & Buttons
8. Fingerprint Reader Sensor
9. LED Indicators

Note that the Touchpad and Buttons valid operational area is that indicated within the red dotted lines above.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Use Fn + F11 Airplane Mode key combination to toggle Airplane Mode On/Off, and check the LED indicator for the power status (see Table 1 - 1, on page 1 - 7).
LED Indicators

The LED indicators on the computer display helpful information about the current status of the computer.

*Note: The powered USB 3.0 port (see Figure 1 - 7 on page 1 - 14) may be toggled on/off by means of the **Fn + Power Button** key combination. When the powered USB port is on it will supply power (for charging devices only, not for operating devices) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices).
Keyboard

The keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See Table 1 - 3, on page 1 - 11 for full function key combination details.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However, special functions/hot-keys unique to the system’s regular keyboard may not work.

NumLk & ScrLk

Hold down the Fn Key and either NumLk or ScrLk to enable number or scroll lock, and check the LED indicator for status.

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.
Illuminated LED Keyboard

(Factory Option)
The optional white illuminated keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See Table 1 - 3, on page 1 - 11 for full function key combination details.

Figure 1 - 4 - Illuminated (White) LED Keyboard

Other Keyboards
If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot-keys unique to the system's regular keyboard may not work.

Scr Lk
Hold down the Fn Key and Scr Lk to enable scroll lock and check the LED indicator for status.

Special Characters
Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.
## Keyboard Shortcuts

The following Windows Logo Key (Winkey) keyboard shortcuts are useful for navigation/operation in *Windows 10*.

*Table 1 - 3 - Function Keys & Visual Indicators*
Quick Start Guide

Control Center

When in the Windows Desktop application (not in the Start screen) press the **Fn + Esc** key combination, or double-click the icon in the notification area of the taskbar to toggle the Control Center on/off. The Control Center gives quick access to frequently used controls and enables you to quickly turn the camera/touch pad on/off (see Appendix B for full details).

![Control Center Access](image)

To run the Control Center press the **Fn + Esc** key combination, or double-click the icon in the notification area of the taskbar.

Close the Control Center by clicking the close icon in the top right of the panel.

*Figure 1 - 5 - Control Center*
Docking

If your purchase includes the docking station, open the docking port cover latch and align the computer with the placeholder on the docking station (see the accompanying docking station for full details of the docking procedure).

Docking Port Cover

Make sure you keep the docking cover closed when the computer is not docked in the station. This will help prevent foreign objects and/or dust getting in to the contact area.

If the docking station is included in your purchase configuration, make sure you open the cover of the docking port before connecting the computer to the station, as failure to do so may result in irreparable damage to the connector on the docking station.

2. Docking Station (Optional)
Quick Start Guide

System Map: Left View

1. DC-In Jack
2. External Monitor Port
3. RJ-45 LAN Jack
4. 1 * Type-A Powered USB 3.0 Port (USB 3.1 Gen 1)
5. 1 * Type-A USB 3.0 Port (USB 3.1 Gen 1)
6. HDMI Out Port
7. Mini DisplayPort 1.2
8. 1 Type-C USB 3.1 Port (USB 3.1 Gen 2) OR (Factory Option)
   1 * USB 3.1 Gen 2 (Type C) Thunderbolt™ 3 Combo Port (* See notes overleaf)
9. Multi-In-1 Card Reader

Multi-In-1 Push-Push Card Reader
The card reader allows you to use the most popular digital storage card formats:

- MMC (MultiMedia Card) / RS MMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC

Powered USB 3.0 Port
The powered USB 3.0 port can supply power (for charging devices only, not for operating devices) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices). Toggle power to this port by using Fn + power button. Power to this port may be enabled/disabled in the BIOS.

External Monitor Port & RJ-45 LAN Jack
If you are using a VGA cable plugged into the external monitor port, and a network cable connected to the RJ-45 LAN jack, it is recommended that you insert the VGA cable before inserting the LAN cable.
Thunderbolt Port Devices

If your purchase option includes a Thunderbolt port note the following:

When plugging a device into a Thunderbolt port allow 30 seconds for the system to scan and recognize the connected device.

Ejecting Thunderbolt Devices

In order to prevent system problems make sure you do not simply pull the cable out from the Thunderbolt port. The hardware must be ejected safely:

1. Go to the notification area of the taskbar in the Desktop App and click on the Safely Remove Hardware and Eject Media icon.
2. Click on Eject “Thunderbolt Device Name”.
3. When you see the Safe to Remove Hardware message you can remove the cable after about 20 seconds, to make sure that it is safe to eject the device.

Thunderbolt Port Security Level

The security level (including setting the port for display devices) for the Thunderbolt port can be set up in the BIOS (see “Security Level (Advanced Menu > Thunderbolt Configuration)” on page 5 - 16).

Thunderbolt™ Port Set for Display

If your purchase configuration includes the Thunderbolt™ combo port then the display configuration for the Thunderbolt™ port and Mini Display Port can be set up in the BIOS (see “DDI Control (Advanced Menu > Advanced Chipset Control)” on page 5 - 14). If the Thunderbolt™ port is enabled for display then the Mini Display Port #1 (Figure 1 - 7 on page 1 - 14) will be turned off.
**Quick Start Guide**

**System Map: Right & Rear Views**

1. 1 * USB 2.0 Port
2. Microphone-In Jack
3. 2-in-1 Audio Jack (Headphone Out/ S/PDIF Out Jack)
4. Optical Device Drive Bay (for DVD Device)
5. Security Lock Slot
6. Smart Card Reader
7. Battery

**Battery Information**

Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.

**Ejecting USB Devices**

In order to prevent system problems do not simply directly pull cables out from the USB port when removing USB devices. Go to the notification area of the taskbar in the Desktop app, and click on the Safely Remove Hardware and Eject Media icon. If you have quickly unplugged a device from the USB port, and then can’t find the device when re-plugged, you will then need to restart the system in order to find the device again.

**USB 3.0 Port OR USB 2.0 Port**

This model includes 1 * USB 2.0 port (Type-A), 2 * USB 3.0 (USB 3.1 Gen 1 port) Type-A ports and 1 * USB 3.0 (USB 3.1 Gen 2 port) Type-C port.

*The USB ports and Smart Card Reader can be enabled/disabled in the BIOS (see page 5 - 10).*
Disk Eject Warning

Don’t try to eject a CD/DVD while the system is accessing it. This may cause the system to “crash”. Stop the disk first then eject it, or press the stop button twice.

CD/DVD Emergency Eject

If you need to manually eject a CD/DVD (e.g. due to an unexpected power interruption) you may push the end of a straightened paper clip into the emergency eject hole. Do not use a sharpened pencil or any object that may break and become lodged in the hole. Don’t try to remove a floppy disk/CD/DVD while the system is accessing it. This may cause the system to “crash”.

Changing DVD Regional Codes

Go to the Control Panel and double-click Device Manager (Hardware and Sound), then click the + next to DVD/CD-ROM drives. Double-click on the DVD-ROM device to bring up the Properties dialog box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code.

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer (see “DVD Regional Codes” on page 2 - 5).
Quick Start Guide

System Map: Bottom View

Figure 1 - 9
Bottom View

1. Battery
2. Docking Port
3. Fan Intake/Vent
4. Component Bay Cover
5. Speakers

Bottom Cover Removal Warning
Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

CPU
The CPU is not a user serviceable part.

Overheating
To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intake while the computer is in use.

Docking Port Cover
If your purchase option includes the docking station, make sure you keep the cover closed when the computer is not docked in the station. This will help prevent foreign objects and/or dust getting in to the contact area. If your purchase option does not include the docking station, an insert will be provided to prevent accidentally opening the docking port. Do not attempt to open the cover or remove the insert in this case.
3G/4G Module USIM Card Installation

If you have included an optional 3G/4G module in your purchase option, follow the instructions below to install the USIM card (which will be provided by your service provider).

1. Turn off the computer, and turn it over and then remove the battery (slide latch 1 in the direction indicated below, then slide hold latch 2 in place and slide the battery out in the direction of arrow 3).
2. Insert the USIM card 4 into the slot at the rear of the battery compartment, as illustrated below, until it clicks fully into position, and then replace the battery (see over).

![Battery Removal & USIM Card Insertion](image)

*Figure 1-10 - Battery Removal & USIM Card Insertion*

**USIM Card Orientation**

Note that the USIM card’s readable side (with the gold-colored contacts) should face down as illustrated.
Quick Start Guide

Inserting the Battery

1. Turn the computer off, and turn it over.
2. Slide the battery into the compartment in the direction of the arrow 1.
3. Slide the latches 2 and 3 in the direction of the arrows to lock the battery.

Figure 1 - 11 - Battery Insertion
Docking Port

Follow the instructions below before connecting the computer to the docking station, if included in your purchase configuration. Failure to open the cover of the docking port before connecting the computer to the docking station may result in irreparable damage to the connector on the docking station.

1. Turn the computer over.
2. Slide the docking port cover latch in the direction of the arrow at point 1 to open the cover.
3. After disconnecting the computer from the docking station, slide the docking port cover latch in the direction of the arrow at point 2.

Make sure you keep the cover closed when the computer is not docked in the station. This will help prevent foreign objects and/or dust getting in to the contact area.

Figure 1 - 12 - Opening and Closing the Docking Port
Windows 10 Start Menu

Most of the apps, control panels, utilities and programs within Windows 10 can be accessed from the Start Menu by clicking the icon in the taskbar in the lower left corner of the screen (or by pressing the Windows Logo Key on the keyboard).

Windows Screens

Note that the Windows screens on the following pages are included as a basic guide and introduction to navigating around Windows 10. However note that these screens are always subject to change, upgrade and redesign. Check the Microsoft website for details.

Figure 1 - 13 - Windows Start Menu
Right-Clicking the Windows Logo In Start Menu

Right-click the Start Menu icon (or use the Windows Logo Key + X key combination) to bring up an advanced Context Menu of useful features such as Apps and Features, Power Options, Task Manager, Search, File Explorer, Device Manager, Computer Management and Network Connections etc.

Figure 1 - 14 - Right-Click Windows Logo in Start Menu
Quick Start Guide

Start Menu Apps & Tiles

The Windows 10 Start Menu will contain a number of apps, and many more will be installed as you add more applications etc. Not all of these apps can fit on the screen so may need click and drag the handles at the edge of the screen to expand the menu in order to view all the apps (you can use the scroll bar to move up and down the screen).

Figure 1 - 15 - Expanding the Start Menu
Pining/Unpinning Apps & Programs to/from the Start Menu
To make things easy to find you can add and remove tiles for apps and programs to the Start Menu. Right-Click on a program’s icon and select **Pin to Start** from the drop-down menu. To remove an app or program from the Start Menu right-click the icon and select **Unpin from Start**. You can use the same method to **pin apps/programs to/from the taskbar** (select pin to taskbar/unpin this program from the taskbar).

*Figure 1 - 16 - Pin to Start/Unpin from Start*
Windows 10 Control Panel

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel can be accessed in a number of ways in Windows 10.

- Select Control Panel under the Windows System item in the Start Menu.
- Type Control Panel into the Search box in the taskbar and click on the icon when it pops up.
- You can pin the Control Panel tile to Start or taskbar.

Figure 1 - 17 - Windows 10 Control Panel Access
Settings
The Settings item in the Start Menu (and also as an App) gives you quick access to a number of system settings control panels allowing you to adjust settings for System, Devices, Network & internet, Personalization, Apps, Accounts, Time & language, Gaming, Ease of Access, Privacy and Update & security.

![Figure 1 - 18 - Settings](image)
Quick Start Guide

Windows 10 Taskbar

In many instances throughout this manual you will see an instruction to access the notification area of the taskbar. The notification area of the taskbar in the bottom right of the screen. Some of the Control Panels and applications referred to throughout the course of this manual can be accessed from here.

![Taskbar](image)

**Figure 1 - 19 - Taskbar**

You can pin/unpin apps to/from the taskbar in much the same way as you can to the Start screen (see “Pining/Unpinning Apps & Programs to/from the Start Menu” on page 1 - 25).
**Action Center**

The **Action Center** appears as a vertical panel on the right side of the screen when you swipe in from the right or click the button in the notification tray. This gives you access to commonly needed functions like Network, All Settings, Airplane Mode, and Project etc.

*Figure 1 - 20 - Action Center*
Video Features

You can switch display devices, and configure display options, from the Display settings (click the Start Menu and click Settings > System or right-click the desktop and select Display settings) control panel. In Windows 10 it is possible to quickly configure external displays from the Project menu (press the Windows logo key on your keyboard and the P key or Fn + F7).

To Configure Displays using Project

1. Attach your display to the appropriate port, and turn it on.
2. Press the + P key combination.
3. Click on any one of the options from the menu to select PC screen only, Duplicate, Extend or Second screen only.
4. You can also click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

Figure 1 - 21 - Project (Devices)
To access the **Display Settings**:
1. You can quickly adjust the display by right-clicking the desktop and selecting **Display Settings**.
2. Adjust the settings for **Brightness and color**, **Scale and layout**, **Resolution** and **Orientation** from the menus.
3. When an external display is attached you can arrange the display configuration from the **Multiple Displays** menu, and arrange the configuration from **Select and rearrange displays**.
4. Click **Apply** to save any changes made.

![Figure 1 - 22 - Display Settings](image-url)
Quick Start Guide

To access the **Intel(R) HD/UHD Graphics Control Panel**:
1. Right-click the desktop and select **Intel(R) Graphics Settings** from the menu.
   OR
2. Click the icon 📀 in the notification area of the Desktop taskbar and select **Intel(R) Graphics Settings** from the menu.

![intel graphics settings icon](image)

*Figure 1 - 23 - Intel® HD/UHD Graphics Control Panel*
Minimum Screen Resolution Settings

1. *Windows 10* has minimum screen resolution requirements.
2. Right-click a blank area of the Desktop and select **Display Settings**.
3. Adjust the **Resolution** to make sure that it is at least 1024 * 768, although preferably 1366 * 768 or above.

*Figure 1 - 24 - Display (Resolution)*
Power Options

Power Options (Hardware and Sound) can be accessed from the Control Panel. The Power button item in Start Menu (or the context menu) may be used to Shut down or Restart (you can also add Hibernate/Sleep to the menu - see page 1-35). To fully control all the power options (including Hibernate mode) go to the Power Options control panel and configure the power button, sleep button and lid to perform the function selected.

Using the Power Button
1. Go to the Start Menu.
2. Click the Power button.
3. Select the power state required from the menu.

Figure 1-25 - Shut Down/Restart
You can also use the **context menu** (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out**, **Sleep**, **Hibernate**, **Shut down**, and **Restart**.

![Figure 1 - 26 - Context Menu Shut Down or sign out](image)

**Adding Hibernate/Sleep to the Power Men**

1. Go to the **Power Options (Hardware and Sound)** control panel (or go to **Windows Settings > Power & sleep > Additional power settings**).
2. Click **Choose what the power buttons do**.
3. Click **“Change settings that are currently unavailable”**.
4. Click to put a check in the **Hibernate/Sleep** box under **Shutdown settings**.
5. Click **Save Changes** and close the control panel.

**Ctrl + Alt + Delete Key Combination**

You can use the **CTRL + ALT + DEL** key combination to bring up a full-screen displaying **Lock**, **Sign out**, **Change a password**, **Task Manager and Switch User**. If you click the **Power** icon in the lower right corner of the screen a power management option menu appears to display **Sleep**, **Hibernate**, **Shut down**, and **Restart**.
Chapter 2: Features & Components

Overview
Read this chapter to learn more about the following main features and components of the computer:

• Hard Disk Drive/Solid State Drive
• Optical (CD/DVD) Device
• Multi-In-1 Card Reader
• Smart Card Reader
• Touchpad and Buttons/Mouse
• Realtek Audio Console

External Optical (CD/DVD) Device Drives
To install applications and drivers etc. you will need to attach an external optical CD/DVD device to the USB ports.
Hard Disk Drive/Solid State Drive

The hard disk drive (or Solid State Drive) is used to store your data in the computer. The hard disk can be taken out to accommodate other 2.5” serial (SATA) hard disk drives with a height of 9.5mm/7mm (see “Storage” on page D - 2). If you need to replace/remove the hard disk (or Solid State Drive) please contact your distributor/supplier for further information.

Figure 2 - 1
Hard Disk Location
Optical (CD/DVD) Device

There is a bay for a 5.25" optical (CD/DVD) device (12.7mm height). The actual device will depend on the module you purchased (see “Storage” on page D - 2). The optical device is usually labeled “Drive D:” and may be used as a boot device if properly set in the BIOS (see “Boot Manager” on page 5 - 6).

Loading Discs
To insert a CD/DVD, press the open button 1 and carefully place a CD/DVD onto the disc tray with label-side facing up (use just enough force for the disc to click onto the tray’s spindle). Gently push the CD/DVD tray in until its lock “clicks” and you are ready to start. The busy indicator 2 will light up while data is being accessed, or while an audio/video CD, or DVD, is playing. If power is unexpectedly interrupted, insert an object such as a straightened paper clip into the emergency eject hole 3 to open the tray.

Sound Volume Adjustment
How high the sound volume can be set depends on the setting of the volume control within Windows. Click the Volume icon on the taskbar to check the setting.

Figure 2 - 2
Optical Device
Handling CDs or DVDs
Proper handling of your CDs/DVDs will prevent them from being damaged. Please follow the advice below to make sure that the data stored on your CDs/DVDs can be accessed.

Note the following:

• Hold the CD or DVD by the edges; do not touch the surface of the disc.
• Use a clean, soft, dry cloth to remove dust or fingerprints.
• Do not write on the surface with a pen.
• Do not store or place the CD or DVD in high-temperature areas.
• Do not use benzene, thinner, or other cleaners to clean the CD or DVD.
• Do not bend the CD or DVD.
• Do not drop or subject the CD or DVD to shock.
DVD Regional Codes
To change the DVD regional codes:

1. Go to the Control Panel
2. Double-click Device Manager (Hardware and Sound), then click the + next to DVD/CD-ROM drives.
3. Double-click on the DVD-ROM device to bring up the Properties dialog box, and select the DVD Region (tab) to bring up the control panel to allow you to adjust the regional code.

- **Region 1** - USA & Canada
- **Region 2** - Western Europe, Japan, South Africa, Middle East & Egypt
- **Region 3** - South-East Asia, Taiwan, South Korea, The Philippines, Indonesia, Hong Kong
- **Region 4** - South & Central America, Mexico, Australia, New Zealand
- **Region 5** - N Korea, Russia, Eastern Europe, India & Most of Africa
- **Region 6** - China

**DVD Region Note**

DVD region detection is device dependent, not OS-dependent. You can select your module’s region code 5 times. The fifth selection is permanent. This cannot be altered even if you change your operating system or you use the module in another computer.

**Figure 2 - 3**

DVD Region Codes
Multi-In-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk (s). Make sure you install the card reader driver (see “CardReader” on page 4 - 7.

- MMC (MultiMedia Card) / RS MMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC

Note: Some of these cards require PC adapters that are usually supplied with the cards.
Smart Card Reader

The Smart Card reader reads pocket-sized Smart Cards, chip cards, or integrated circuit cards (ICC) with embedded integrated circuits. Smart Cards can be used for security identification, authentication, data storage and application processing within large organizations.

A Smart Card uses a gold contact that connects to a tiny microprocessor and memory chips embedded inside the card. The card is usually used to store authentication data e.g. a user name and password. The computer’s Smart Card reader communicates through the gold contact on the card to the microprocessor, and if the data on the card matches that stored in the computer, then access is granted. A Smart Card can also be used to securely encrypt and decrypt individual files on the computer.

Smart Card Driver

Smart Cards usually require a driver for any proprietary smart card system. This driver will usually be supplied by your system administrator as applicable to your particular Smart Card system.

Figure 2 - 5
Left View
1. Smart Card Reader
Features & Components

Touchpad and Buttons/Mouse

The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse.

Touchpad Sensitivity

The mouse button zones at the bottom of the pad are defined by the line at the bottom of the pad, and the left and right buttons are divided roughly down the middle. Press the left button zone for a left click, and right button zone for a right click action.

Figure 2 - 6
Touchpad Sensitivity

Mouse Driver

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.
Mouse Properties Control Panel

You can configure the functions from the Mouse control panel in Windows as follows.

1. Select Control Panel under the Windows System item in the Start Menu (see page 1 - 26), or click Additional mouse options from Mouse in Windows Settings (see page 2 - 12).
2. Click Mouse (Hardware and Sound > Devices and Printers).
3. Click the menu headings tabs to adjust your mouse preferences.

Figure 2 - 7
Mouse Properties Control Panel - Buttons
Features & Components

Figure 2 - 8
Mouse Properties
Control Panels

2 - 10 Mouse Properties Control Panel
Mouse & Touchpad Devices

You can configure the functions from the **Mouse or Touchpad** control panels in **Devices** in the **Settings** control panel as follows.

1. Click the **Settings** item in the **Start Menu** (or **All Settings** in the Action Center).
2. Click **Devices**.
3. Click **Mouse** or **Touchpad**.

![Figure 2 - 9 Windows Settings > Mouse/Touchpad](image)
Mouse Settings
You can select the primary mouse button and scrolling options and access Mouse Properties from Additional mouse options.

Figure 2 - 10
Windows Settings
Mouse

2 - 12 Mouse & Touchpad Devices
Touchpad Settings

You can disable the Touchpad by clicking the Touchpad button to turn it off.

You can set the system to automatically disable the internal Touchpad when an external USB point device (e.g. a USB mouse) is attached. Click “Leave touchpad on when a mouse is connected” to off.
Features & Components

Touchpad Taps
The **Touchpad Sensitivity** feature helps prevent recognizing taps on the pad by accident, by recognizing when your palm is resting on it or brushing its surface while you are typing.

Click in the check box to enable/disable the different gestures or taps on the surface of the pad to perform specific actions to manipulate documents, objects and applications.

![Figure 2 - 12 Windows Settings Touchpad Sensitivity & Taps](image)

- Tap with a single finger to single-click
- Tap with two fingers to right-click
- Tap twice and drag to multi-select
- Press the lower right corner of the touchpad to right-click
Touchpad Scroll and Zoom
Click to enable/disable the two finger scrolling and pinch zooming gesture.

The two-finger scrolling feature works in most scrollable windows and allows you to scroll horizontally and vertically. Place two fingers, slightly separated, on the Touchpad surface and slide both fingers in the direction required (in a straight continuous motion).

The two-finger pinch to zoom gesture can be used to perform the same function as a scroll wheel in Windows applications that support CTRL + scroll wheel zoom functionality. Place two fingers on the pad (for best results use the tips of the fingers) and slide them apart to zoom in, or closer together to zoom out.
The **three-finger** and **four-finger swipes** and **taps** can be configured for a number of different functions. Select the appropriate function from the drop-down menu.

**Figure 2 - 15**
Three-Finger Gestures (Swipes & Taps)

**Figure 2 - 16**
Four-Finger Gestures (Swipes & Taps)
The following is an overview of some of the main gestures you can use with your Touchpad, however these can be configured from the Touchpad menus.

**Figure 2 - 17**
Touchpad Gesture Examples
Features & Components

Realtek Audio Console

You can configure the audio options on your computer from the Sound control panel in Windows, or from the Realtek Audio Console Windows Start menu. Make sure you have installed the driver and checked the Microsoft Store for updates (see “Audio” on page 4 - 8). The volume may also be adjusted by means of the volume icon in the taskbar or the audio slider in the Settings menu (see sidebar).

Volume Adjustment
The sound volume level can be clicking using the volume control icon in the notification area of the taskbar.

Figure 2 - 18
Realtek Audio Console (Windows Start Menu)
Realtek Audio Console - Main

You can adjust the **Speaker** and **Microphone** levels by using the sliders in the **Realtek Audio Console Main** window.

**Figure 2 - 19**
Realtek Audio Console (Main)

HD Audio parameters can be set in the BIOS (see page 5 - 10).
Features & Components

Realtek Audio Console - Speakers
Click Speakers to access controls for the format and speaker balance etc.

Figure 2 - 20 Realtek Audio Console (Speakers)
Realtek Audio Console - Microphone

Click **Microphone** to access advanced controls for recording on the microphone. Adjust the recording **Main Volume** level to around 60, to obtain the optimum recording quality.

![Realtek Audio Console](image)

**Figure 2 - 21**
Realtek Audio Console (Microphone)
Realtek Audio Console - Device Advanced Settings

Device Advanced Settings allows for further configuration of the Connector Settings, Playback Device and Recording Device.

For the purposes of recording it is recommended that you enable “Separate all input jacks as independent input devices” in Device advanced settings. This will help prevent a situation where the internal microphone seems to be disabled, or where sound can still be heard from the speakers even though the headphones are plugged into the headphone jack.

Figure 2 - 22
Realtek Audio Console - Device Advanced Settings
Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system. This chapter covers:

• The Power Sources
• Turning On the Computer
• Power Plans
• Power-Saving States
• Configuring the Power Buttons
• Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user's manual of your operating system.

(Note: All pictures used on the following pages are from the Windows 10 OS.)

Power Options

Power management in Windows is configured from Power Options (Hardware and Sound), which can be accessed from the Control Panel.
The Power Sources

The computer can be powered by either an AC/DC adapter or a battery pack.

AC/DC Adapter

Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   - Attach the AC/DC adapter cord to the DC-In jack on the left of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and **leave it there for 6 seconds or longer**.
   - Remove the adapter cord from the computer's DC-In jack, and then plug it back in again; the battery will now be unlocked.

2. Raise the lid/LCD to a comfortable viewing angle.
3. Press the power button to turn “On”.

Battery

The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “Battery FAQ” on page 3 - 21).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 16.
Turning On the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use **Power Options** (**Hardware and Sound**) in the *Windows* control panel to configure this feature.

**Power Button as Stand by or Hibernate Button**

You can use the OS’s “Power Options” control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS’s documentation, or “Configuring the Power Buttons” on page 3 - 9 for details).
Shutting the Computer Down

Note that you should always shut your computer down by choosing the **Shut down** command as this will help prevent hard disk or system problems. Use the **Power** item in the **Start Menu** and select **Shut down**. If you want to add Hibernate/Sleep to the Power Menu see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 10.

You can also use the **context menu** (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out**, **Sleep**, **Hibernate**, **Shut down**, and **Restart**.

*Figure 3 - 1*
Shut Down/Restart
Power Plans

The computer can be configured to conserve power by means of power plans (Control Panel > Power Options). You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

Resuming Operation

See Table 3 - 1, on page 3 - 11 for information on how to resume from a power-saving state.

Password

It is recommended that you enable a password on system resume in order to protect your data.
Power Management

Each *Windows power plan* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose **High performance** (you may need to click **Create a power plan** to select the High performance plan) for maximum performance when the computer is powered from an AC power source. Choose the **Power saver** (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

*Figure 3 - 3 Create Power Plan (High Performance & Power Saver)*

3 - 6 Power Plans
Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. *Windows 10* uses the **Sleep**, **Hibernate** and **Shut Down** power-saving states.

**Sleep**

In **Sleep** all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter **Sleep** to save power.

The PC wakes from **Sleep** within seconds and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in **Sleep** is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.

To add **Sleep** to the **Power Menu** see “*Adding Hibernate/Sleep to the Power Menu*” on page 3 - 10.

---

**Wake On LAN Support**

*Wake-On-LAN* is only supported from **Sleep** or **Hibernate** states *in Windows*.

If you require your computer to wake up from network activity in Windows then make sure that the computer is either in **Sleep** or **Hibernate**.

*Wake-On-LAN* is not supported from Shut-down states in *Windows*. 
Power Management

**Hibernate**

*Hibernate* uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. *Hibernate* will also return you to where you last left off within seconds. You should put your mobile PC into *Hibernate* if you will not use the computer for a period of time, and will not have the chance to charge the battery. To add *Hibernate* to the **Power Menu** see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 10.

**Shut down**

You should **Shut down** the computer if you plan to install new hardware, plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from **Shut down** takes longer than from **Sleep** or **Hibernate**.

*Figure 3 - 4*

Power Button & Start Menu Power
Configuring the Power Buttons

The power/sleep button (Fn + F12 key combo) and closed lid may be set to send the computer in to a power-saving state. Click **Choose what the power buttons do** on the left menu in **Power Options** to bring up the menu.

![Figure 3 - 5](image)

**Power Options**

**Define Power Buttons**

*Define power buttons and turn on password protection*

Choose the power settings that you want for your computer. The changes you make to the settings on this page apply to all of your power plans.

*Change settings that are currently unavailable*

Power and sleep buttons and lid settings

- **When I press the power button**
  - **On battery**: Sleep
  - **Plugged in**: Sleep

- **When I press the sleep button**
  - **On battery**: Sleep
  - **Plugged in**: Sleep

- **When I close the lid**: Sleep

*Shutdown settings*

- **Turn on fast startup (recommended)**
  - This helps start your PC faster after shutdown. Restart isn’t affected. [Learn More](link)
- **Sleep**
  - Show in Power menu.
- **Hibernate**
  - Show in Power menu.
- **Lock**
  - Show in account picture menu.

[Save changes] [Cancel]
Adding Hibernate/Sleep to the Power Menu
Add **Hibernate/Sleep** to the **Power Menu** as follows.

1. Go to the **Power Options** (Hardware and Sound) control panel.
2. Click **“Change settings that are currently unavailable”**.
3. Click **Choose what the power buttons do**.
4. Click to put a check in the **Hibernate/Sleep** box under **Shutdown settings**.
5. Click **Save Changes** and close the control panel.
Resuming Operation

You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (*Fn + F12* key combo).

<table>
<thead>
<tr>
<th>Power Status</th>
<th>Icon</th>
<th>Color</th>
<th>To Resume</th>

</table>
| Sleep        | Blinking White| Press the Power Button  
                                        Press the Sleep Button (*Fn + F12* Key Combo) |
| Hibernate    | Off (battery) | Press the Power Button  
                                        Orange (AC/DC adapter) |
| Display Turned Off | White | Press a Key or Move the Mouse/Touchpad |

Table 3 - 1
Resuming Operation

**Closing the Lid**

If you have chosen to send the computer to *Sleep* when the lid is closed, raising the lid will wake the system up.

**Power Button**

When the computer is on, you can use the power button as a Sleep/Hibernate/Shut Down hot key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will force the computer to shut down).
Power Management

Ctrl + Alt + Delete Key Combination
You can use the CTRL + ALT + DEL key combination from almost any of the Windows 10 interfaces/Apps to bring up a full-screen displaying Lock, Switch User, Sign out, Change a password and Task Manager options. If you click the Power icon in the lower right corner of the screen a power management option menu appears to display Sleep, Shut down, and Restart.

To fully control all the power options (including Hibernate mode) go to the Power Options control panel and configure the power button, sleep button and lid to perform the function selected.

3 - 12 Configuring the Power Buttons
Settings Menu Power Controls

The **Settings** item in the **Start Menu** (or via the **Action Center**) gives you access to a number of power settings control panels which enable you to quickly adjust power options. Click **System** to access the menu including the power option settings.

![Settings Menu Power Controls](image)
Power Management

Battery Saver
Battery in Settings will display the battery level, and by clicking **Battery usage by app** you can see the current state of battery usage by application etc. The **Battery saver** can be turned on if the battery level falls below a certain level to limit background activity and push notifications.

**Figure 3 - 9**
Settings > Battery > Battery Saver

- **Battery Saver**
  - Extend battery life by limiting background activity and push notifications when your device is low on battery.
  - Turn battery saver on automatically if my battery falls below:
    - 90%
Power & Sleep

Power & sleep gives you quick access to Screen and Sleep settings. Click Additional power settings to go to the main power options control panel.

Figure 3 - 10
Settings > Power & Sleep
Battery Information

Follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan Change plan settings > Change advanced power settings (see Figure 3 - 3 on page 3 - 6).

Click the battery icon \(\text{Battery Icon (Notification Area) & Battery Advanced Settings}\) in the notification area to see the current battery level and charge status (you can also click Power & sleep settings to access the Settings menu to quickly adjust power settings).

Low Battery Warning

When the battery is critically low, immediately connect the AC/DC adapter to the computer or save your work, otherwise, the unsaved data will be lost when the power is depleted.
## Power Slider Settings

<td><img src="image" alt="Better Performance" /></td>
<td><img src="image" alt="Best Performance" /></td>
</tr>
</tbody>
</table>

- **For DC Only**
  - Lowest Power Setting: Lower Power than Default Settings
  - Windows Features Throttled & Screen Brightness Reduced
  - Auto Enabled at 20% of Battery Capacity
- **For AC & DC**
  - Lowest Power Setting: Slightly Favors Performance Over Power
  - Windows Features Throttled & Screen Brightness Reduced: Default Position
  - Auto Enabled at 20% of Battery Capacity

Note that some Windows features and background applications may behave differently, or may be blocked, when the system is in Battery Saver mode (check with Microsoft for details).

### Table 3 - 2
**Power Slider Settings & Notes**
Power Management

Conserving Battery Power

- Use a **power plan** that conserves power (e.g. **Power saver**), however note that this may have an affect on computer performance.
- Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
- Reduce the amount of time before the display is turned off.
- Close wireless, Bluetooth, modem or communication applications when they are not being used.
- Disconnect/remove any unnecessary external devices e.g. USB devices, ExpressCards etc.

**Figure 3 - 12**
**Windows Mobility Center**
(Control Panel)
Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days.

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason (e.g. long term storage) see “Removing the Battery” on page 3 - 24.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 21 for instructions on how to do this).

Recharging the Battery with the AC/DC Adapter
The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. Refer to “LED Indicators” on page 1 - 7 for information on the battery charge status, and to “Battery FAQ” on page 3 - 21 for more information on how to maintain and properly recharge the battery pack.
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

Caution
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.

Damaged Battery Warning
Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your distributor/supplier. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ
How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. **Create a power plan** for discharging the battery and set all the options to **Never**.
3. Click **Change plan settings** (after creating it) and click **Change plan settings > Change advanced power settings**.
Power Management

4. Scroll down to **Battery** and click + to expand the battery options.
5. Choose the options below (click **Yes** if a warning appears):

- Low battery levels = 0%
- Critical battery Levels = 1%
- Low battery action = Do Nothing
- Critical battery action (On battery) = Shut Down
- Critical battery action (Plugged in) = Do Nothing

---

**Figure 3 - 14**

Power Options
Advanced Settings - Battery

---

3 - 22 Battery Information
Power Management

How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Power Management

Removing the Battery

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason (e.g. long term storage) see below.

1. Turn the computer off, and turn it over.
2. Slide the latch 1 in the direction of the arrow.
3. Slide the latch 2 in the direction of the arrow, and hold it in place.
4. Slide the battery out in the direction of the arrow 3.

Bottom Cover Removal Warning

Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty.

If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

Figure 3 - 15
Battery Removal
Inserting the Battery

1. Turn the computer off, and turn it over.
2. Slide the battery into the compartment in the direction of the arrow 1.
3. Slide the latches 2 and 3 in the direction of the arrows to lock the battery.

![Battery Insertion](image)
Power Management
Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

The Device Drivers & Utilities + User’s Manual disc contains the drivers and utilities necessary for the proper operation of the computer. Table 4 - 1, on page 4 - 4 lists what you need to install and it is very important that the drivers are installed by the method outlined in this chapter, and in the order indicated.

Note that the information included on the following pages is for Windows 10 (64-bit) only.

Module Driver Installation

The procedures for installing drivers for the Wireless LAN, Fingerprint, Bluetooth & WLAN Combo and Intel Technology modules are provided in “Modules & Options” on page 6 - 1.
Drivers & Utilities

Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into the DVD drive.
2. Click the message "Tap to choose what happens with this disc."
3. Click Run autorun.exe.
4. Click Install Drivers (button), or Option Drivers (button) to access the Optional driver menu.

Figure 4 - 1 - Drivers Installer Screen 1
5. Check the driver installation order from Table 4 - 1, on page 4 - 4 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.

6. Click to select the driver you wish to install, (you should note down the drivers as you install them).

7. Follow the instructions for each individual driver installation procedure as listed on the following pages.

![Drivers Installer](image)

*Figure 4 - 2 - Install Drivers*

</tbody>
</table>

Table 4 - 1 - Driver Installation

All drivers provided are for the Windows 10 (64-bit) operating system.
Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.
Manual Driver Installation
Click *Browse CD/DVD* (button) in the *Drivers Installer* application and browse to the executable file in the appropriate driver folder.

Windows Update
After installing all the drivers make sure you enable *Check for updates* (*Settings > Update & security > Check for updates*) in order to get all the latest security updates etc. (all updates will include the latest hotfixes from Microsoft). See “*Windows Update*” on page 4 - 9 for instructions.

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the *Control Panel* in the *Windows OS* and double-click the *Programs* icon (*Programs > Uninstall a program*). Click to select the driver (if it is not listed see below) and click *Uninstall*, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the *Programs and Features* menu:

1. Go to the *Control Panel*.
2. Double-click *Device Manager* (*Hardware and Sound > Devices and Printers > Device Manager*).
3. Double-click the *device* you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click *Driver* (tab) and click the *Update Driver* or *Uninstall* button and follow the on screen prompts.
Drivers & Utilities

User Account Control
If a User Account Control prompt appears as part of the driver installation procedure, click Continue or Allow, and follow the installation procedure as directed.

Windows Security Message
If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or “Install” to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found
If you see the message “New Hardware Found” during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.

Driver Installation General Guidelines
The driver installation procedure outlined in this Chapter (and in Chapter 7 Options & Modules), are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. Next > Next > Finish) unless you are an advanced user. In many cases a restart is required to install the driver.

Make sure any modules (e.g. WLAN or Bluetooth) are ON (i.e. the system is not in Airplane Mode) before installing the appropriate driver.
Driver Installation Procedure

Insert the Device Drivers & Utilities + User’s Manual disc into your DVD drive and click Install Drivers (button).

**Chipset**
1. Click 1.Install Chipset Driver > Yes.
2. Click Next > Accept > Install.
3. Click Restart Now to restart the computer.

**Video (VGA)**
1. Click 2.Install VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.

**LAN**
*Note: If the computer enters a deep sleep mode during installation, you will be prompted to plug in a network cable, and click OK, to continue installation. If a network cable is not available, restart the system and re-install the LAN driver.*
1. Click 3.Install LAN Driver > Yes.
2. Click OK to complete the installation.

**CardReader**
1. Click 4.Install Cardreader Driver > Yes.
2. Click Finish.

**Touchpad**
1. Click 5.Install Touchpad Driver > Yes.
2. Click OK > Restart Now (this prompt may take a few seconds to appear) to restart the computer.

**Intel® HID Filter Driver**
1. Click 6.Install HID Filter Driver > Yes.
2. Click Next.
3. Click Yes to accept the license.
4. Click Next.
5. Click Finish to restart the computer.

**Control Center**
1. Click 7.Install Control Center AP > Yes.
2. Click Next > Install.
3. Click Finish to restart the computer.
Drivers & Utilities

MEI Driver
1. Click 8. Install MEI Driver > Yes.
2. Click Next.
3. Click the check box to accept the license and then click Next.
4. Click Next.
5. Click Finish.

Audio
1. Click 9. Install Audio Driver > Yes.
2. Click Next.
3. Click Finish to restart the computer.
4. Realtek Audio Control Panel will download but you will need to have a working internet connection.
5. Click the Start menu in Windows to access the Microsoft Store App tile under Explore.
6. Click the Sign in icon and select Downloads and updates.
7. Click Check for Updates.
8. A list of apps being downloaded will pop-up.
9. To prioritize the Realtek audio driver you can click Pause all to pause the download queue.
10. Click on Realtek Audio Control and click on the resume icon to download the driver.
11. When just installed the Realtek Audio Console will appear in the Windows Start menu.

Note that after installing the audio driver the system will not return to the Drivers Installer screen. To install any of the optional drivers listed overleaf, eject the Device Drivers & Utilities + User’s Manual disc and then reinsert it (or double-click the disc icon in My Computer), and click Option Drivers (button) to access the optional driver menu.

It is recommended you now also install the Intel Rapid Storage Technology driver (see “Intel® Rapid Storage Technology” on page 6 - 27 - required for AHCI mode hard disks).
After installing all the drivers make sure you enable Windows Update in order to get all the latest security updates etc. (all updates will include the latest hotfixes from Microsoft).

To enable Windows Update make sure you are connected to the internet:

1. Go to the Control Panel.
2. Click Windows Update (System and Security/Security).
3. Click Check for updates (button).
4. The computer will now check for updates (you need to be connected to the internet).
5. Click Install now (button) to begin checking for the updates.
6. Click Install updates (button) to install the updates.
Drivers & Utilities

Optional Drivers

See the pages indicated in *Table 4 - 1, on page 4 - 4* for the driver installation procedures for any modules included in your purchase option.

*Figure 4 - 3 - Option Drivers*

*Note that you need to install both the WLAN & Bluetooth drivers for Intel and 3rd party WLAN & Bluetooth Combo modules.*

4 - 10 Optional Drivers
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software BIOS (Basic Input/Output System).

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in BIOS. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: Don’t make any changes unless you are sure of what you are doing. Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.

BIOS Screens

Note that the BIOS screens pictured on these pages are intended for guidance in setting up your system’s BIOS.

BIOS versions are subject to constant change and revision, therefore your computer’s actual screens may appear slightly different from those pictured on these pages.
The Insyde BIOS Utility

Each time you turn on the computer the system takes a few seconds to conduct a including a quick test of the on-board RAM (memory).

As the boot process proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run the BIOS setup.

If there are no problems the system will load the operating system. Once that starts, you can’t get into BIOS without rebooting.

The Setup BIOS Utility tells the system how to configure itself by translating instructions from the operating system, and other software, into instructions that the computer hardware understands. manage basic features, identify installed devices and subsystems (e.g. port configuration).
UEFI Boot
UEFI (Unified Extensible Firmware Interface) is an advanced firmware standard supporting fast startup.

With UEFI Boot prompts at boot to press F2 (to access the BIOS) or F7 (to access Boot options) will not appear. However you can still press F2 to enter the setup, or F7 to choose the preferred boot device, if you press the key immediately the system boots up.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.
If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The BIOS main menu will appear. To see the boot options press F7 and choose your preferred boot device.
Insyde BIOS Start Screen

On accessing the BIOS you will be presented with the Start Screen with 5 menu icons, date and time information, CPU temperature information and navigation and Help icons at the bottom of the screen.

You can use the Touchpad, an attached mouse, or the cursor/arrow keys to navigate the menus and press *Enter* to access the submenu.

*Figure 5 - 1*

*Insyde BIOS Start Screen*
Insyde BIOS Start Screen Options:

• **Continue**: Press *Enter* here or click *Continue* to carry on with the boot process and load the operating system.

• **Boot Manager**: Press *Enter* here or click *Boot Manager* to access the Boot Manager utility.

• **Boot From File**: Press *Enter* here or click *Boot From File* to select a file or device to Boot from.

• **Administer Secure Boot**: Press *Enter* here or click *Administer Secure Boot* to proceed with a Secure Boot process. This will take you to the Secure Boot screen which allows you to manage secure boot settings.

• **Setup Utility**: Press *Enter* here or click *Setup Utility* to access the BIOS settings in the Setup Utility.

Note to return to the Start Screen from any of the submenus press the *Esc* key.
When you turn the computer on it will look for an operating system from the devices listed in this menu, and **in this priority order**. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the **Boot Option Menu**.

Press Enter to access the menu, use the arrow keys to move up and down the menu, and press Enter to select a device.
If you need to boot from a file (e.g. on a USB flash drive) then access this menu and use the cursor keys to select the device or file (you can press Enter to explore for a file on an attached device).
Administer Secure Boot

Secure Boot prevents unauthorized operating systems and software from loading during the startup process. You can select a trusted UEFI file to execute the BIOS, make sure that you Enforce Secure Boot, Erase all Secure Boot Settings or Restore the Factory Settings.
You can also make custom changes to the Key Management database if required by accessing the advanced secure boot options for Platform Key (PK Options), Key Exchange Key (KEK Options), Allowed Signatures Database (DB Options) and Forbidden Signatures Database (DBX Options).
SATA Port # (Main Menu)
Pressing **Enter** opens the sub-menu to show the configuration of an optical device/HDD on the computer’s SATA Ports.
OffBoard SATA/NVme Controller Configuration (Main Menu)
Pressing **Enter** opens the sub-menu to show the configuration of any devices on the off board SATA/NVme Controller if applicable.

System Time & System Date (Main Menu)
The hour setting uses the 24-hour system (i.e., ØØ = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.

System/Extended Memory: (Main Menu)
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.

MB Series / BIOS Revision / KBC/EC firmware Revision / MAC Address
This item contains information on the BIOS version, network adapter address etc., and is not user configurable.

**Figure 5 - 7**
Main (Lower)
Advanced Chipset Control (Advanced Menu)

The sub-menu here allows you to enable/disable Intel(R) Speed Shift Technology, VT-d UEFI OS Fast Boot, Intel Software Guard Extensions and to configure the MiniDisplay Port/Thunderbolt port.
Intel(R) Speed Shift Technology (Advanced Menu > Advanced Chipset Control)
Use this menu item to enable/disable Intel® Speed Shift Technology. You will also need to install the driver for Intel Speed Shift Technology (see “Intel® Speed Shift Technology Driver” on page 6 - 26).
VT-d (Advanced Menu > Advanced Chipset Control)
Enable/disable Intel® Virtualization Technology for Directed I/O (VT-d) from this menu. This extends Intel's Virtualization Technology (VT) by providing hardware assists for a virtualization solution.

UEFI OS Fast Boot(Advanced Menu > Advanced Chipset Control)
Use this menu item to enable/disable the Fast Boot option, which when enabled, helps reduce the time it takes to boot the computer.

SW Guard Extensions (SGX) - (Advanced Menu > Advanced Chipset Control)
Intel provides SGX, which is a set of instructions allowing user-level code a degree of security, and privacy, from the operating system. Make sure that SW Guard Extensions is Enabled here, and then install the driver (see “Intel® Software Guard Extensions” on page 6 - 25) to support this.

DDI Control (Advanced Menu > Advanced Chipset Control)
You can change DDI (Display Digital Interface) control from DDI to mDP (Mini DisplayPort) or DDI to TBT (Thunderbolt) here to support external displays connected to these ports, if you have included a Thunderbolt port in your purchase configuration.
SATA Mode (Advanced Menu)
The SATA (Serial ATA) control is configured to operate in **AHCI Mode** (Advanced Host Controller Interface) or in **RAID Mode** (for **Intel® Optane™**).

The **SATA Mode** should be set **BEFORE installing an operating system**, and after you have backed up all necessary files and data (see sidebar). See “Setting Up SATA Mode (Optane™ or AHCI)” on page 6 - 2 for details. Make sure you install the **Intel Rapid Storage Technology application** if you have set the SATA Mode to **Intel RST Premium With Intel Optane System Acceleration (for Intel Optane)**, or to **AHCI** (see “IRST Driver Installation” on page 6 - 22).

If you wish to change your SATA mode to/from AHCI/Intel RST (Optane) mode note that doing so may prevent your operating system from booting, and may require a reinstall of the OS. If you do wish to change the SATA mode then backup any necessary data on your hard disk(s) as you will need wipe the disks clean in order to prevent system problems.

Power On Boot Beep (Advanced Menu)
Use this menu item to enable/disable the beep as the computer starts up.

Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the battery low alarm beep.
Intel(R) Thunderbolt Support (Advanced Menu > Thunderbolt Configuration)
You can enable/disable discrete Intel(R) Thunderbolt port support from this menu.

Security Level (Advanced Menu > Thunderbolt Configuration)
You can set the security level to No Security, User Authorization, Secure Connect or Display Port Only.

- **No Security mode will allow any devices to be connected.** In this mode the connection manager auto connects to any new devices which are plugged in.

- With **User Authorization** you can set the port to allow only devices with a Unique ID to connect. **If the unique ID is not located then you will be asked to confirm the connection.** The connection manager will request approval from the host and auto approval may be given based on the unique ID of the connecting device.

- With **Secure Connect** you can set a one time saved key only then **the host will write a unique ID to a device to ensure only approved devices can connect.** The connection manager will request approval from the host, and auto approval is only given if the host challenge to the device is acceptable.

- Setting the port to **Display Port only will only allow display devices to connect to the port, and no data connections will be allowed.** In this mode only displays are connected (re-driver or DP tunnel, no PCIe tunneling) and no tunneling is done for PCIe devices.
Setup Utility - Security Menu

Set Supervisor Password (Security Menu)
You can set a password for access to the BIOS. This will not affect access to the computer OS (only the BIOS). An on-screen keyboard is available to assist with keyboard input.

Security Menu
The changes you make here affect the access to the BIOS utility itself, and also access to your machine as it boots up after you turn it on. These settings do not affect your machine or network passwords which will be set in your software OS.

Figure 5 - 10
Security Menu
Note: To clear existing supervisor passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance. To clear a user password just click on Clear User Password.

Set User Password (Security Menu)
You can set a password for user mode access to the BIOS. This will not affect access to the computer OS, (only the Setup utility) unless you choose to set a Password on Boot (see below). Some menu items in the BIOS cannot be modified in user mode.

Note: You can only set the user password after you have set the supervisor password.

Power on Password: (Security Menu)
Specify whether or not a password should be entered to boot the computer (you may only set a Power on Password if a supervisor password is enabled). If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Password Warning
If you set a boot password (Password on boot is “Enabled”), NEVER forget your password. The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
TPM Configuration (Security Menu)
This sub-menu will allow you to enable/disable Trusted Platform Module (TPM) support, and to configure the TPM State. Select **TPM Configuration** and press Enter to access the sub-menu. Press Enter to access the **Security Device Support** menu and select **Enable** to support TPM. To reset the TPM select **Clear TPM** to clear existing TPM information (see “Trusted Platform Module” on page 6 - 46).
Setup Utility - Boot Menu

EFI (Boot Menu)
Press Enter to Enable/Disable any available device from which to boot under EFI.
**UEFI Setting (Boot Menu)**
The Unified Extensible Firmware Interface (UEFI) specification provides a clean interface between operating systems and platform firmware at boot time. In contrast to BIOS, UEFI defines a set of standard boot and runtime services. The *Network Stack* item can be enabled/disabled as an option under **UEFI Setting** and **PXE Boot capability** can be enabled/disabled and configured here.

![Figure 5 - 13 UEFI Setting](image_url)
Click *Exit Saving Changes* (or press F10) to save all changes made and exit the BIOS. Choosing *Exit Discarding Changes* will wipe out any changes you have made to the *Setup* and exit the BIOS. You can also choose to *Load Optimal Defaults* (or press F9) to return the *BIOS* to its original state, and erase any previous changes you have made in a previous session. Select *Discard Changes* to cancel any changes made in the current session.
Chapter 6: Modules & Options

Overview

This chapter contains information on the following modules, which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

- Setting Up SATA Mode (Optane™ or AHCI)
- Wireless LAN Module
- Fingerprint Reader Module
- Bluetooth Combo Module
- Intel® Software Guard Extensions
- Intel® Speed Shift Technology Driver
- Intel® Rapid Storage Technology
- Intel® vPro™ Technology
- Intel® vPro™ Technology
- Trusted Platform Module
- 3G/4G Module

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the module(s) are OFF if you are using the computer aboard aircraft.

Driver Installation & Module Power

Make sure any modules (e.g. WLAN, PC Camera, 4G & Bluetooth modules) are ON before installing the appropriate driver.
Important Notice

If your purchase option includes both Wireless LAN and 4G modules, then the appropriate antennas will be installed. Note that in order to comply with FCC RF exposure compliance requirements, the antenna must not be co-located or operate in conjunction with any other antenna or transmitter.

Important Notice - 4G & Bluetooth/Wireless LAN Modules

In order to comply with FCC regulations you should NOT operate the 4G module and the Bluetooth/Wireless LAN modules at the same time as this may disrupt radio frequency, and cause interference. When the 4G module is powered on, make sure that the Bluetooth/Wireless LAN modules are powered off.
Setting Up SATA Mode (Optane™ or AHCI)

**AHCI Mode**

Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced serial ATA features such as Native Command Queuing (for maximum hard disk efficiency and performance). Make sure you install the **Intel® Rapid Storage Technology** application to support your HDDs/SSDs in AHCI mode (see “Intel® Rapid Storage Technology” on page 6 - 27).

**Intel® Optane™**

**Intel® Optane™** is a combination of a compatible memory device and **Intel Rapid Technology software**. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to an non volatile, low latency Intel® Optane™ SSD.

Contact your distributor or supplier to see if your system supports this technology.

**Intel® Rapid Storage Technology Application**

Make sure you install the **Intel® Rapid Storage Technology** application if you have set up your system in RAID (for **Intel® Optane™**) mode (see “Intel® Rapid Storage Technology” on page 6 - 27).

After setting the SATA mode to **Intel® Optane™** and installing the **Intel® Rapid Storage Technology** application, DO NOT uninstall the **Intel® Rapid Storage Technology** application.
Intel® Optane™ Setup Procedure

After initial setup make sure you install the Intel Rapid Storage Technology driver - see “IRST Driver Installation” on page 6 - 27).

You need to setup Intel® Optane™ before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

- The Microsoft Windows 10 OS DVD.
- An Intel® Optane™ SSD installed in your system.
- The Device Drivers & Utilities + User’s Manual disc.

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Go to the Boot menu, select UEFI Setting and press <Enter> (see page 5 - 15).
3. Set UEFI Boot to “Enabled”.
4. Press <Esc> to exit the menu and go to the Main menu.
5. Select OffBoard NVMe Controller Configuration and press enter to check that an Intel® Optane™ SSD is present.
6. Press <Esc> to exit the menu and go to the Advanced menu.

Optane SSD Module Removal

If you need to remove an installed Optane SSD module for any reason, you must disable (see “Disabling Intel® Optane™” on page 6 - 33) Intel Optane before doing so.

Failure to disable Optane before removing an Optane SSD module will result in the system being unable to start up.
7. Select **SATA Mode** (see page 5 - 11), press <Enter> and select “**RAID Mode**.”.

8. Select “**Save and Exit**”.
9. As the computer restarts press <F2> to enter the **BIOS** again.
10. Go to the **Advanced** menu and you will now see the **Intel(R) Rapid Storage Technology (Advanced menu)** item. You can and press <Enter> to check the information.
(Note this item only appears after you have restarted and accessed the BIOS again after having set **SATA Mode** to **RAID**)

**Figure 6 - 3**
**Intel(R) Rapid Storage Technology**

6 - 6 Setting Up SATA Mode (Optane™ or AHCI)
11. Select “Save and Exit”, however ensure that the condition in the bulleted point below is met before doing so.

- Make sure the Windows 10 OS DVD is in the DVD drive, as the computer starts up it will automatically boot from the Windows 10 OS DVD (you will be prompted to press a key to boot from the DVD).

12. Press <F2> as the computer starts up and select Boot Manager.
13. Click to select the DVD drive containing the Windows 10 OS DVD.
14. Press a key at system startup to begin installing Windows from your Microsoft Windows 10 disc.

15. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).

16. Select Custom: Install Windows only (advanced).
17. It is recommended that you select and then delete existing partitions.
18. Click New to create a partition for Windows.
19. It is very important to make sure that when you create the partition, to leave at least a minimum of unallocated space of 5MB (see sidebar).

20. Follow the on-screen instructions to install the Windows 10 operating system.
21. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).
22. Run the Intel® Rapid Storage Technology application to manage your Intel® Optane™ system as instructed in “Intel® Rapid Storage Technology for Optane Systems” on page 6 - 28.

Creating a Windows Partition for Optane

When installing Windows, make sure that you leave a minimum of 5MB of unallocated space for the Intel® Optane™ software to create needed metadata.

After you have created a Windows partition the Windows Setup screen will display the partitions and sizes, including the unallocated space. If the unallocated space is less than 5MB, then delete the partitions and recreate them until the criteria is met.

Note this is 5MB only, not GB.
23. After installing the Intel® Rapid Storage Technology application you can access Device Manager (right-click the Start menu and select Device Manager).

24. Click Disk drives to check the Optane drive.

---

Figure 6-4
Device Manager

---

6 - 8 Setting Up SATA Mode (Optane™ or AHCI)
Wireless LAN Module

If your purchase option includes the Intel® Combination Wireless LAN & Bluetooth module then install the driver as instructed below.

Make sure that the module is on (i.e. the system is not in Airplane Mode) before installing the driver, and that you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo module.

Intel® WLAN Driver Installation

1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 1.Install WLAN Driver > Yes.
4. Click in the check box to agree to the End User License Agreement and click Install.
5. Click Finish.
6. The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 10).
WLAN Configuration in Windows

You can configure a wireless connection using one of the following options, however make sure the Wireless LAN module is turned on (and not in Airplane Mode) before configuration begins.

1. Click the Wireless icon in the notification area of the taskbar.
2. Make sure that Airplane mode is off (the Airplane mode icon should be gray).
3. A list of available access points will appear.
4. Double-click an access point to connect to it (or click it and click Connect).
5. Enter a network security key (password) if required, and click **Next**.
6. You can choose to share or connect to devices or not.
7. When you are connected to the network access point it will display **Connected** status.
8. Select any connected network and click **Disconnect** to disconnect from a connected access point.

---

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited.

Make sure the module is either **OFF** or in **Airplane mode** if you are using the computer aboard aircraft.

---

**Figure 6 - 6**

Network Connected
(Click Disconnect)
9. You can click the Airplane Mode button to turn the mode On or Off.
10. You need to either use Airplane Mode, or turn the WLAN module off aboard aircraft.
11. Network & Internet in Windows Settings will bring up a more comprehensive list of network and internet settings including Wi-Fi (can be turned on/off), Airplane mode (Airplane mode and Wireless devices can be turned on/off) VPN, Dial-up, Ethernet and Proxy.

Figure 6 - 7  
Network & Internet Settings

6 - 12 Wireless LAN Module
Fingerprint Reader Module

The fingerprint reader module provides a high level of security for your computer. Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection.

There are two different fingerprint modules supplied with this model. Install the driver from the Device Drivers & Utilities + User’s Manual disc by following the appropriate instructions on the page overleaf.

The fingerprint reader module uses the Sign-in options configuration of the Windows Account.

Fingerprint Reader and Power Saving States

If your computer is in a power saving state (e.g. Hibernate or Sleep) you should keep your finger clear of the fingerprint sensor.

Allow the system to fully resume before swiping your finger across the sensor.
Fingerprint Reader Driver Installation

1. Make sure the system is not in Airplane Mode, and then insert the *Device Drivers & Utilities + User's Manual* disc into the DVD drive.
2. Click Option Drivers.
3. Click 2. Install Fingerprint Driver > Yes.
4. Click Next > Install.
5. Click Finish to restart the computer.
6. The fingerprint reader module uses the **Sign-in options** configuration of the Windows Account (see overleaf).
Fingerprint Module Configuration

1. Click the Settings item in the Start Menu and then click Accounts and click Sign-in options.
2. You will need to add a Windows password (click Add under Password).
3. After you have added the password you will need to also add a PIN.
4. Under Windows Hello click Set up under Fingerprint.
5. The wizard will then guide you through the set up process to scan your fingerprints.

Note this code as it may be required to help you sign-in if there are any issues with using the fingerprint reader to sign-in (see “Fingerprint Sign-In Issues” on page 6 - 16).
6. You will be instructed to **Touch the fingerprint sensor** (simply touch the sensor) on the reader a number of times (**lift and touch again**).

7. Try to present different parts of your finger in different positions (similar to the various positions you may use when using it, and if you see red at any point try a different position).

8. Click **Set up PIN** if you need to add a PIN.

9. You can choose to **Add another** finger (this is recommended) or **Remove** the current fingerprint reading.

10. You can now scan your fingerprint to log-on to the computer.

---

**Fingerprint Sign-In Issues**

If at the Windows Hello screen, the Fingerprint reader fails to recognize the fingerprint 3 times it will then block access to the computer.

**In this case you will need to use your PIN** (the PIN you used when initially setting up the fingerprint reader) to **access the computer**. Alternatively you can sign-in using your windows password.

After using the PIN code (or windows Password) to access the computer you can go to the **Settings > Accounts > Sign-in options** if you wish to change any settings.
Bluetooth Combo Module

If your purchase option includes the **Intel® Combination Wireless LAN & Bluetooth module** then install the driver as instructed overleaf.

Make sure that the module is on (i.e. the system is not in **Airplane Mode**) before installing the driver, and that you install the drivers in the order indicated in **Table 4-1, on page 4-4**.

**Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo module.**

---

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the WLAN/Bluetooth module(s) are OFF if you are using the computer aboard aircraft. Use **Airplane Mode** hot key to toggle Airplane Mode On/Off, and check the LED indicator for the power status.

---

**Bluetooth Data Transfer**

Note that the transfer of data between the computer and a Bluetooth enabled device is supported in one direction only (simultaneous data transfer is not supported). Therefore if you are copying a file from your computer to a Bluetooth enabled device, you will not be able to copy a file from the Bluetooth enabled device to your computer until the file transfer process from the computer has been completed.
Intel Bluetooth Combo Driver Installation

1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 3.Install Combo BT Driver > Yes.
4. Click Next.
5. Click in the check box to accept the license and click Next.
6. Select the setup type (Typical is recommended) and click Install.
7. Click Finish.
8. See “Bluetooth Configuration in Windows” on page 6 - 19 for configuration instructions.
Bluetooth Configuration in Windows

1. Go to the **Settings** control panel and click **Devices** (or click the Bluetooth icon in the taskbar and click **Add a Bluetooth Device**).
2. Click **Bluetooth & other devices** and make sure Bluetooth is **On**.
3. Click **Add Bluetooth or other device > Bluetooth (Add a device)** and a list of discovered devices will appear.

*Figure 6 - 10*
**Settings > Bluetooth & Other Devices** *(Add a Bluetooth Device)*

*Figure 6 - 11*
**Add a Device**
4. Double-click the device you want to pair with the computer and click Connect, if the PIN matches that on the device to which you wish to connect (you may need to click paid on the device).
5. Select a device and click **Remove Device** to disconnect from any device (click **Yes** to confirm).
To Make your Computer Discoverable to Bluetooth Devices

1. Go to the Settings control panel and click Devices (or click the Bluetooth icon in the taskbar and click Open Settings).
2. Click Bluetooth & other devices and click More Bluetooth options.
3. In Bluetooth Settings make sure that Allow Bluetooth devices to find this PC check box (Discovery) has a check inside it.
4. Make sure that the Alert me when a new Bluetooth device wants to connect check box (Notifications) has a check inside it, if you want to be notified when a Bluetooth device wants to connect.

Figure 6 - 14
Bluetooth Settings
Thunderbolt Port Driver

If you have included the Thunderbolt 3 combo port (factory option) in your purchase configuration then you need to install the driver.

Before installing the Thunderbolt driver it is necessary to initialize the port first. To do so simply insert any USB Type C device (e.g. a USB flash drive) into the combo port (see Figure 1 - 13 on page 1 - 22). You may then install the driver as below.

1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 4.Install Thunderbolt Driver > Yes.
4. Click the check box to accept the license and then click Install.
5. Click Finish.
6. See also “Intel(R) Thunderbolt Technology (Advanced Menu > Intel(R) Thunderbolt)” on page 5 - 12 for Thunderbolt port configuration in the BIOS.
7. See over for further information.
Thunderbolt Port Devices
If your purchase option includes a Thunderbolt port note the following:
When plugging a device into a Thunderbolt port allow 30 seconds for the system to scan and recognize the connected device.

Ejecting Thunderbolt Devices
In order to prevent system problems make sure you do not simply pull the cable out from the Thunderbolt port. The hardware must be ejected safely:
1. Go to the notification area of the taskbar in the Desktop App and click on the Safely Remove Hardware and Eject Media icon.
2. Click on Eject “Thunderbolt Device Name”.
3. When you see the “Safe to Remove Hardware” message you can remove the cable after about 20 seconds, to make sure that it is safe to eject the device.

Thunderbolt Port Security Level
The security level (including setting the port for display devices) for the Thunderbolt port can be set up in the BIOS (see “Security Level (Advanced Menu > Intel(R) Thunderbolt)” on page 5 - 13).

Thunderbolt™ Port Set for Display
If your purchase configuration includes the Thunderbolt™ combo port then the display configuration for the Thunderbolt™ port and Mini Display Port can be set up in the BIOS (see “DDI Control (Advanced Menu > Advanced Chipset Control)” on page 5 - 11). If the Thunderbolt™ port is enabled for display then the Mini Display Port #1 4 (Figure 1 - 13 on page 1 - 22) will be turned off.
**Intel® Software Guard Extensions**

Install the **Intel® Software Guard Extensions Driver** which provides a set of instructions allowing user-level code a degree of security, and privacy, from the operating system.

**Intel SGX Driver Installation**

*Make sure you have enabled Software Guard Extensions from Advanced Chipset Control in the Advanced Menu in the BIOS before installing the driver (see “SW Guard Extensions (SGX) - (Advanced Menu > Advanced Chipset Control)” on page 5 - 14).*

1. **Make sure the system is not in Airplane Mode**, and then insert the **Device Drivers & Utilities + User’s Manual** disc into the DVD drive.
2. Click **Option Drivers**.
3. Click **5. Install Intel SGX Driver > Yes**.
4. Click **OK > OK** to complete the installation.
**Intel® Speed Shift Technology Driver**

Install the Intel® Speed Shift Technology driver as outlined below. Speed Shift Technology allows operating system to hand off some or all control of the handing of the computer’s *P-States* to the processor. This has a couple of noticeable benefits in responsiveness and the reduction of power consumption. Intel® Speed Shift Technology can be enabled/disabled in the BIOS (see “Intel(R) Speed Shift Technology (Advanced Menu > Advanced Chipset Control)” on page 5 - 13).

**Speed Shift Technology Driver Installation**

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into an attached DVD drive.
2. Click *Option Drivers* (button).
3. Click 6.Install Speed Shift Driver > Yes.
4. When the “Is this package from a source you trust?” message pops-up click “Yes, add it”.
5. This will complete the installation procedure.

---

**P-States**

P-states are voltage-frequency pairs that set the speed and power consumption of the coprocessor. When the operating voltage of the processor is lower, so is the power consumption.
Intel® Rapid Storage Technology

Install the Intel® Rapid Storage Technology to support your AHCI mode SATA drive (see “SATA Mode (Advanced Menu)” on page 5 - 15).

IRST Driver Installation
1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 7. Install IRST Driver > Yes.
4. Click Next > Next.
5. Click in the check box to accept the license, and then click Next.
6. Click Next > Next > Next.
7. Click Finish to restart the computer.
8. Run the Intel® Rapid Storage Technology app from the Apps screen.

See the following pages for more information if you have set your system for Intel® Optane™ configuration.

After setting the SATA mode to Intel® Optane™ and installing the Intel® Rapid Storage Technology application, DO NOT uninstall the Intel® Rapid Storage Technology application.

IRST and M.2 PCI-e SSDs
Note that Intel® Rapid Storage Technology does not support M.2 SSDs with a PCI-e Interface (M.2 SSDs with a SATA Interface are supported).

Optane SSD Module Removal
If you need to remove an installed Optane SSD module for any reason, you must disable (see “Disabling Intel® Optane™” on page 6 - 33) Intel Optane before doing so. Failure to disable Optane before removing an Optane SSD module will result in the system being unable to start up.
Intel® Rapid Storage Technology for Optane Systems

Intel® Rapid Storage Technology application displays status information on your Intel® Optane™ configuration. Run the Intel® Rapid Storage Technology application from the item in the Start menu.

When the Intel® Rapid Storage Technology application is launched the system will open the Status window. Here you can view the general health of the storage system. Various volume creation and management options are available depending on the system’s status.

Figure 6 - 15
Intel® Rapid Storage Technology Status

Optane SSD Module Removal

If you need to remove an installed Optane SSD module for any reason, you must disable (see “Disabling Intel® Optane™” on page 6 - 33) Intel Optane before doing so.

Failure to disable Optane before removing an Optane SSD module will result in the system being unable to start up.
Enabling Intel® Optane™

1. Run the Intel® Rapid Storage Technology application.
2. Click Enable.
3. The system will pop-up a message and ask you to select a compatible fast drive (in this case there should only be one option).
4. You will need to restart the computer after enabling **Optane**, and make sure the system is powered by the powered AC/DC adapter, and not by battery only.

5. Click **Yes** to begin the process (this may take some time).

6. You can click the **Intel Optane Memory** tab in the IRST control panel and click **Reboot** to restart the computer, or simply after the process has been completed restart the computer.

---

**Figure 6 - 18**
IRST - Intel®
Enable Optane™
Memory - Reboot

---

6 - 30 Intel® Rapid Storage Technology
7. After restarting can access **Device Manager** (right-click the **Start** menu and select **Device Manager**).
8. Click **Disk drives** to check that the drive should read **Intel Optane**.

![Device Manager (Disk drives)](image)
9. Run the Intel® Rapid Storage Technology application to check the status.

Figure 6 - 20
IRST - Intel® Optane™ Memory (Enabled)
Disabling Intel® Optane™
If you need to disable Intel® Optane™ for any reason follow these instructions.

1. Run the Intel® Rapid Storage Technology application.
2. Click Disable.
3. Click Yes when the message pops up.
6 - 34 Intel® Rapid Storage Technology

4. Restart the computer to complete the process.
5. Run the Intel® Rapid Storage Technology application.
6. The Status of Intel® Optane™ Memory is indicated in the Window.
7. To enable Intel® Optane™ Memory follow the process indicated in “Enabling Intel® Optane™” on page 6 - 29.

HDDs & Intel® Optane™ SSDs

Note that if your system’s HDD or Intel® Optane™ SSD is to be transferred to another system for use for any reason, you will need to disable Intel® Optane™ in IRST first.

Removal of any cover(s) and/or screw(s) violates the terms of your warranty.

Figure 6 - 23
IRST - Intel® Optane™ Memory (Status)
8. Restart your notebook computer and press <F2> to enter the BIOS.
9. Go to the Advanced menu and you will now see the Intel(R) Rapid Storage Technology (Advanced menu) item. You can and press <Enter> to check the information.

10. Click on Intel Optane *******.

Figure 6 - 24
Intel(R) Rapid Storage Technology (Optane)
11. Click **Disable**.

![Figure 6 - 25](image1)

**Intel(R) Rapid Storage Technology (Disable Optane)**

12. You can click to either Enable or Disable "**Preserve user data**:"

13. Click on "**Are you sure you want to disable**?" and select **Yes**.

![Figure 6 - 26](image2)

**Intel(R) Rapid Storage Technology (Preserve User Data)**

14. Select "**Save and Exit**".

15. If you re-enable Optane in the Intel Rapid Storage Technology control panel then it will also be re-enabled in the BIOS.

---

**6 - 36 Intel® Rapid Storage Technology**
Intel® vPro™ Technology

Intel® vPro™ Technology is supported by Model A computers only. This set of technology features, built into the computer’s motherboard, allows Information Technology departments remote access to the computer. This allows the IT department to monitor, maintain and manage computers regardless of the state of the operating system or the computer’s power state. This can be done over a wired or corporate wireless network, or even outside the corporate firewall through a wired LAN connection.

Accessing the Intel Management Engine

To access the Intel Management Engine press Ctrl + P at startup. Your system administrator will need to assist you in managing the information as applicable to your enterprise. Note the following password information for the Intel Management Engine:

• The default password is “admin” (without quotes).

If you get an "Error - Intel(R) ME password change rejected" message when creating a new password, then note the following parameters for creating a password:

• between 8 and 32 characters long
• Contain both upper and lower case Latin characters
• Have at least one numeric character
• Have at least one ASCII non-alphanumeric character (!, @, #, $, %, ^, &, *)
Select MEBx Login and press “Enter” to access the password screen. Enter the password “admin” (without quotes) and you will then be prompted to enter your own password (note the password information on the previous page). Once you have entered the password you will then be taken to the platform configuration screen.

The platform configuration screen allows you to setup Intel ME as per your requirements (consult your IT administrator for the actual settings required). Access the Intel® Management and Security Status control panels from the Apps screen. These features allow users and IT Administrators to enhance and protect computing assets. Your system administrator will need to assist you in managing some of the information here.
Help
Click Learn More to and then click For more information refer to the user guide.
PC Camera Module

When the PC Camera application is run the LED indicator to the left of the camera will be illuminated (see Figure 1-2 on page 1-6). Note that you need to use the Camera app in Windows to take pictures and capture video. Use the Fn + F10 key combination (see “Function/Hot Key Indicators” on page 1-11) to toggle power to the PC Camera module.
Camera App

1. Make sure the PC Camera is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera app icon** (you can type “camera” into the search box to find the Camera app).
3. The interface displays two buttons on the right of the screen; one for photo and one for video.

   ![Photo](image1.png) ![Video](image2.png)

4. Simply click on the appropriate button to switch to either photo or video modes.
5. You can use the buttons at the top of the screen to access the **Settings** and **Auto/Pro** menus (for **Self Timer** or **Exposure compensation**).

   ![Settings and Pro](image3.png)
6. Click **Settings** to access the camera settings menu to make adjustments for **Camera press and hold button**, **photo Aspect ratio, Framing grid**, **Time lapse**, **video recording frame rates** and **Flicker reduction**.

**Camera Settings**

The **Self Timer** can be set to take Photos after 2, 5 or 10 seconds and can also be set to continue taking pictures until the camera button is pressed again (**Photo Burst**).

The **Aspect Ratio** can be changed to those the system supports.

You can use a **Framing grid** to help you line up pictures.

**Time lapse** can be set to keep taking photos until the camera button is pressed again.

The **Video recording** resolution and frame rate can be set to any supported by the system. Note that capturing high resolution video files requires a substantial amount of disk space for each file.

After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to File Explorer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. CD, DVD or USB Flash drive.

If you need to reduce any screen flicker, change the settings in **Flicker reduction** to either e.g. 50Hz or 60Hz.
7. With the Pro menu expanded you can access the **Exposure compensation** button to adjust the brightness.

*Figure 6 - 32
Camera Brightness Adjustment*
Taking Pictures/Capturing Video

1. Make sure the PC Camera is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera** app icon (you can type “camera” into the search box to find the Camera app).
3. Click to select either **photo** or **video** modes.
4. Click the photo icon to take a picture.
5. Click on the video icon to start video capture (when video capture begins a timer will appear at the bottom of the screen).
6. To stop video capture click the stop button (you can also pause the video capture).
7. Captured photos and videos will be saved to the Photos app stored in the Start menu (type Photos into the search box if you cannot find the app). You can also access the photos from the Camera roll icon at the bottom right of the Camera app screen.

Figure 6 - 34
Photos App (For Captured Photos & Videos) & Camera Roll in the Camera App
Trusted Platform Module

(Optional)
The TPM security chip allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection. In addition Make sure you prepare a removable media (e.g. a USB flash drive) to store passwords etc. before beginning the TPM initialization process.

Before setting up the TPM functions you must enable and initialize the security platform.
Enabling & Activating TPM

1. Restart the computer.
2. Enter the **BIOS** pressing **F2** during the POST/startup.
3. Click to enter the **Setup Utility** and select the **Security** menu.
4. Click **TPM Configuration** and select **Enable** for **Security Device Support**.
5. You will then need to save the changes and restart the computer.

Clearing TPM Information

You can click **Clear TPM**, which will toggle the setting between **Enabled/Disabled**. If set to **Enabled** this will clear existing TPM information in order to reset the TPM.

Figure 6 - 35
Security - Trusted Computing
TPM Management in Windows
You can manage your TPM settings from within Windows:

1. Go to the Control Panel.
2. Click BitLocker Drive Encryption (System and Security).
3. Click TPM Administration.

Figure 6-36
BitLocker Drive Encryption (TPM Administration)
4. The TPM Management window allows you to configure the TPM within Windows. As TPM is usually administered within large enterprises and organizations, your system administrator will need to assist you in managing the information here.

Figure 6 - 37
Trusted Platform Module (TPM) Management on Local Computer Administration
TPM Actions

1. Click **Prepare the TPM** and follow the instructions in the Wizard to prepare the TPM (this will probably require a restart of the computer and confirmation of the setting changes after restart by pressing the appropriate F key).
2. After the restart the TPM will be prepared and you can then use the Actions menu to **Turn TPM off**, **Change Owner Password**, **Clear TPM** or **Reset TPM Lockout**.
3. A wizard will help take you through any setup steps.

![TPM Actions Menu](image)
BitLocker

BitLocker Drive Encryption can be used in conjunction with the TPM to encrypt data on the disk. Access the Microsoft **BitLocker Drive Encryption** control panel applet from the *Windows* control panel (*System and Security*).

1. Click **Turn on BitLocker**.
2. Follow the on-screen instructions to setup BitLocker, and make sure you have a removable media (e.g. a USB flash drive) to store saved recovery keys etc.

*Figure 6 - 39
BitLocker Drive Encryption*
3G/4G Module

If you have included an optional UMTS/HSPDA+ based 3G module (Universal Mobile Telecommunications System or High Speed Packet Access) module or LTE (Long Term Evolution) 4G module (see “Communication” on page D - 3 for specification details) in your purchase option, you do not require a driver/application installation for Windows 10. Follow the instructions overleaf to install the USIM card (which will be provided by your service provider), and then access the 3G/4G network in the same manner as the WLAN.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the 3G/4G/WLAN/Bluetooth module(s) are OFF if you are using the computer aboard aircraft. Use Airplane Mode hot key to toggle Airplane Mode On/Off, and check the LED indicator for the power status.

Important Notice

If your purchase option includes both Wireless LAN and 3G/4G modules, then the appropriate antennas will be installed. Note that in order to comply with FCC RF exposure compliance requirements, the antenna must not be co-located or operate in conjunction with any other antenna or transmitter.

Important Notice - 3G/4G & Bluetooth/Wireless LAN Modules

In order to comply with FCC regulations you should NOT operate the 3G/4G module and the Bluetooth/Wireless LAN modules at the same time as this may disrupt radio frequency, and cause interference. When the 3G/4G module is powered on, make sure that the Bluetooth/Wireless LAN modules are powered off.
3G/4G Module USIM Card Installation

Follow the instructions below to install the USIM card (which will be supplied by your service provider).

1. Turn **off** the computer, and turn it over and then remove the battery (slide latch 1 in the direction indicated below, then slide hold latch 2 in place and slide the battery out in the direction of arrow 3).
2. Insert the USIM card 4 into the slot at the rear of the battery compartment, as illustrated below, until it clicks fully into position, and then replace the battery (see over).

**Power Safety Warning**
Before you undertake any installation procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines). It is advisable to also remove your battery in order to prevent accidentally turning the machine on.

**USIM Card Orientation**
Note that the USIM card’s readable side (with the gold-colored contacts) should face down as illustrated.

*Figure 6 - 40*
Battery Removal
Inserting the Battery
1. Turn the computer **off**, and turn it over.
2. Slide the battery into the compartment in the direction of the arrow 1.
3. Slide the latches 2 and 3 in the direction of the arrows to lock the battery.

Figure 6 - 41
Battery Insertion
4G Configuration

You can configure a 4G connection as below, however make sure the system is not in Airplane Mode before configuration begins and turn Wi-Fi Off in order to use your 4G connection as priority. You can connect to a 4G connection in much the same way as the WLAN connection except you use the Cellular menu.

1. Click the Wireless icon in the notification area of the taskbar and click on the Wi-Fi icon in order to turn it off (the Wi-Fi icon will be grayed out when off).

2. Make sure that Airplane mode is off (the Airplane mode icon should be gray).
3. Click the Cellular button to turn it On.

![Figure 6 - 42 Wi-Fi Menu with Wi-Fi On & Off](image)

![Figure 6 - 43 Cellular Menu (Disconnected)](image)
4. Click **Connect** to connect to the cellular network manually.
5. Once connected you can then access the internet, download e-mail etc. as per any internet connection.
6. Click **Disconnect** to drop the connection to the cellular network.
7. You will need to turn your Wi-Fi on again after disconnecting.

**Figure 6 - 44**

Cellular Connection
8. **Cellular** in **Network & Internet** in **Windows Settings** will allow you to access some further cellular settings.

Chapter 7: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a power strip, make sure it is actually working. Check the LED Indicators (see “LED Indicators” on page 1 - 7) to see the computer’s power status.

- **Connections** - Check all the cables to make sure that there are no loose connections anywhere.

- **Power Savings** - Make sure that the system is not in Hibernate or Sleep mode by pressing the keys configured in your Power Options (see “Power-Saving States” on page 3 - 7), the Fn + F4 key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the Fn + F8 and F9 keys to adjust the brightness.

- **Display Choice** - Press Fn + F7 to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no optical media and/or USB storage devices in any connected drive.
Troubleshooting

Backup and General Maintenance

• Always backup your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the serial numbers if you are storing them out of their original cases, e.g. in a CD wallet.

• Run maintenance programs on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

• Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a Supervisor password for the BIOS (see “The Insyde BIOS Utility” on page 5 - 2).

• Keep copies of vital settings files such as network, dialup settings, mail settings etc.(even if just brief notes).

Warranty

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Troubleshooting

Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Bootable CD-ROM/DVD-ROM/USB storage device” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Upgrading and Adding New Hardware/Software

- Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

- Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

- Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

- When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

- Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

- Thoroughly check any recent changes you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; Example - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.

## Problems and Possible Solutions

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>You turned on the <strong>power</strong> but it doesn’t work.</td>
<td><em>Battery missing / incorrectly installed.</em> Check the battery bay, make sure the battery is present and seated properly (the design of the battery only allows it to go in one way). Make sure there’s nothing interfering with the battery contacts.</td>
</tr>
<tr>
<td>The battery <strong>LED power</strong> indicator is blinking orange.</td>
<td><strong>Low Battery.</strong> Plug in the DC power source. If the computer doesn’t start up immediately, turn it off then on again.</td>
</tr>
<tr>
<td>You are <strong>losing battery power</strong> too quickly.</td>
<td><em>The system is using too much power.</em> If your OS has a Power Options scheme (see “Power Plans” on page 3 - 5) check its settings. You may also be using a USB device/external device that is drawing a lot of power.</td>
</tr>
<tr>
<td>Actual <strong>battery operating time</strong> is shorter than expected.</td>
<td><em>The battery has not been fully discharged before being recharged.</em> Make sure the battery is fully discharged and recharge it completely before reusing (see “Battery Information” on page 3 - 16).&lt;br&gt;Power Options have been disabled. Go to the Control Panel in Windows and re-enable the options.&lt;br&gt;A peripheral device/USB device is consuming a lot of power. Turn off/remove the unused device to save power.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### Problem | Possible Cause - Solution
--- | ---
The computer feels **too hot**. | Make sure the computer is properly ventilated and the Vent/Fan intakes are not blocked. If this doesn’t cool it down, put the system into **Hibernate** mode or turn it off for an hour. Make sure the computer isn’t sitting on a thermal surface (see “**Overheating**” on page 1 - 18). Make sure you’re using the correct adapter. Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vent/Fan intakes to be blocked.

The **system will not wake up from a power saving state (Sleep/Hibernate) on network activity** (Wake on LAN) even though **I have plugged in the powered AC/DC adapter.** | **Wake on LAN is supported in AC mode only.**
When the system enters a power saving state the plugged in AC/DC adapter should be connected, and should remain connected, in order to allow the system to wake up on network activity. Unplugging the adapter, and then plugging it back in again, will not allow the system to wake up on network activity.

Nothing appears **on screen.** | **The system is in a power saving mode.** Toggle the sleep/resume key combination, **Fn + F4** (see “**Configuring the Power Buttons**” on page 3 - 9). **The screen controls need to be adjusted.** Toggle the screen control key combinations **Fn + F8/F9.** If you’re connected to an external monitor, make sure it’s plugged in and turned on. You should also check the monitor’s own brightness and contrast controls. **The computer is set for a different display.** Toggle the screen display key combination, **Fn + F7.** If an external monitor is connected, turn it on. **The screen saver is activated.** Press any key or touch the **Touchpad.**
## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause - Solution</th>

</table>
Appendix A: Interface (Ports & Jacks)

Overview
The following chapter will give a quick description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.
# Interface (Ports & Jacks)

## Notebook Ports and Jacks

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2-in-1 Audio Jack (Headphone-Out Jack/SPDIF)</td>
<td>This is a combination headphone/S/PDIF Jack. Headphones or speakers can be connected through this jack. <strong>Note:</strong> Set your system’s volume to a reduced level before connecting to this jack. As a S/PDIF (<em>Sony/Philips Digital Interface Format</em>) Out Jack, it allows you to connect your DVD-capable PC to a Dolby AC-3 compatible receiver for “5.1” or ‘dts’ surround sound.</td>
</tr>
<tr>
<td>Card Reader Port</td>
<td>The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device.</td>
</tr>
<tr>
<td>DC-In Jack</td>
<td>Plug the supplied AC/DC adapter into this jack to power your computer.</td>
</tr>
<tr>
<td>External Monitor (VGA) Port</td>
<td>This port allows you to connect an external monitor, or Flat Panel Display, to get dual video or simultaneous display on the LCD and external monitor/FPD.</td>
</tr>
<tr>
<td>HDMI-Out Port</td>
<td>The HDMI-Out (<em>High-Definition Multimedia Interface</em>) is an audio/video connector interface for transmitting un compressed digital streams. This allows you to connect an external monitor, TV or Flat Panel Display etc. as a display device by means of a HDMI cable. <strong>Note:</strong> HDMI carries both audio and video signals.</td>

<tbody>
<tr>
<td>USB 2.0 Ports</td>
<td>These USB ports are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device). USB 3.0 ports capable of 5Gbps (SuperSpeed) are classified as <strong>USB 3.1 Gen 1</strong>. There are <strong>two USB 3.1 Gen 1 (Type A)</strong> ports on this computer model. USB 3.1 Gen 2 ports are capable of 10Gbps SuperSpeed+. This model includes <strong>1 Type-C Gen 2 port</strong>. The <strong>Type-C USB 3.1 Gen 2 port is the smaller black port</strong> (there is a factory option to have this port configured as a <strong>Thunderbolt™ 3 Combo Port</strong>, see over). <strong>Note:</strong> The powered USB 3.1 port may be toggled on/off by means of the <strong>Fn + Power Button</strong> key combination. When the powered USB port is on it will supply power (for <strong>charging devices only, not for operating devices</strong>) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices - see page 7 - 11). <strong>Note:</strong> This function is designed to help <strong>charge USB compliant devices</strong>, but is <strong>not designed to allow their operation</strong>. <strong>Note:</strong> The maximum amount of current supplied by <strong>USB Type-C ports is 500 mA for USB2.0/900 mA for USB 3.1</strong> The USB ports can be switched on/off in the BIOS.</td>

### Interface (Ports & Jacks)

**Thunderbolt™ 3 Combo Port**

(Shared with the USB Type-C Port)

(Factory Option)

This Thunderbolt 3 port allows for the connection of external peripherals to the computer by combining PCI Express (PCIe), DisplayPort (DP), USB 3.1 and its own Thunderbolt 3 technologies. Up to seven peripherals may be supported by one connector by daisy-chaining the devices. Devices supported include HDDs/SSDs, Audio Interfaces, docks, display devices, cameras, network cables etc.

Install the driver as instructed in “Thunderbolt Port Driver” on page 6 - 38. This will install the Thunderbolt software to your computer, and this can be accessed by clicking or double-clicking the icon in the Start screen, Desktop app or notification area of the taskbar.

The display configuration for the Thunderbolt ports and Mini Display Ports can be set up in the BIOS (see “DDI Control (Advanced Menu > Advanced Chipset Control)” on page 5 - 10).

</tbody>
</table>

---

**Thunderbolt Port Devices**

When plugging a device into a Thunderbolt port allow 30 seconds for the system to scan and recognize the connected device. In order to prevent system problems make sure you do not simply pull the cable out from the Thunderbolt port. The hardware must be ejected safely:

1. Go to the notification area of the taskbar in the Desktop App and click on the Safely Remove Hardware and Eject Media icon.
2. Click on Eject “Thunderbolt Device Name”.
3. When you see the “Safe to Remove Hardware” message you can remove the cable after about 20 seconds, to make sure that it is safe to eject the device.
Interface (Ports & Jacks)
Appendix B: Control Center

Overview

The following chapter will give a quick description of the functions of the Control Center. The Control Center gives quick access to frequently used controls and settings. Click the Control Center icons to toggle the appropriate function, or hold the mouse button down and move the dial control where applicable.

Figure B - 1 - Control Center
Control Center

Control Center Menus
The Control Center contains 2 menu headings (Basic Setting & Extra Setting). The Extra Setting tab allows you to adjust the app skin color to your choice. A third menu item (LED Device) is available for systems supporting illuminated white LED keyboards only.

Figure B - 2 - Extra Setting & LED Device Menu
Power Modes
You can set a Power Mode by clicking the appropriate icon in the center of the Control Center. Each power mode will affect Airplane Mode and PC camera power.

- **Power Saving Mode**: The Airplane Mode will be ON and the PC Camera will be turned OFF.
- **Quiet Mode**: The Airplane Mode will be ON.
- **Performance Mode** and **Entertainment Mode**: The Airplane Mode will be OFF.
- Clicking the Default button in Entertainment will reset the default settings for this mode.
Control Center

Power Status
The Power Status icon will show whether you are currently powered by the battery, or by the AC/DC adapter plugged in to a working power outlet. The power status bar will show the current battery charge state.

Brightness
The Brightness icon will show the current screen brightness level. You can use the dial to adjust the screen brightness, or you can use the F₈/F₉ key combinations.

PC Camera/Touchpad/Left Windows Key
Click these buttons to toggle the PC Camera or Touchpad power status, or to turn the Left Windows Key functionality on/off. The button under the icon will appear highlighted when it is enabled. Note that the power status of the camera module is also affected by the Power Mode selected (see “Power Modes” on page B - 3).

Docking
If you have included the Docking Station in your purchase option, then the Docking button will be highlighted when the computer is successfully docked to the station (see “Docking Station Guide” on page E - 1).

Fan Speed
You can set the fan speed to Maximum (full power) or Automatic. The fan speed will adjust itself automatically to control the heat of the CPU. However you can adjust the setting to maximum if you prefer. You can use the Offset slider to adjust the settings to your preference, however these settings can be overridden by the system as a safety precaution, if it requires heavier use of the fan.
Sleep / Hibernate Button
Click either the Hibernate or Sleep buttons to have the computer enter the selected power-saving mode (you will receive a warning before the system switches to the power-saving mode and will need to click OK to confirm).

Volume
The Volume icon will show the current volume level. You can use the dial to adjust the Volume or the Fn + F5/ F6 key combinations, or use the Fn+ F3 key combination to mute the volume.

Caps Lock/Scroll Lock/Number Lock
Click the button to toggle the appropriate lock mode.

*See over for LED Device menu (for illuminated white LED keyboards only).*
Control Center

LED Device Menu - KB Sleep Timer / KB Brightness
Enable and then select the amount of time the system for which the system is idle before the keyboard LED enters sleep mode (i.e. the LED keyboard illumination will turn off to save power). You can also adjust the keyboard brightness.

Figure B - 4 - LED Device

B - 6 Control Center
Appendix C: Video Driver Controls

The basic settings for configuring the LCD are outlined in “Video Features” on page 1 - 30.

Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

1. Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button).
2. Click 2.Install VGA Driver > Yes.
3. Click Next > Yes > Next > Next.
4. Click Finish to restart the computer.

Note: After installing the video driver go to the Display/Display Settings control panel to adjust the video settings to the highest resolution.

Dynamic Video Memory Technology

Intel® DVMT automatically and dynamically allocates as much system memory (RAM) as needed to the integrated video system (the video driver must be installed). DVMT returns whatever memory is no longer needed to the operating system.
Configure Other Displays Using Project

You can configure attached displays from **Project**.

1. Attach your display to the appropriate port, and turn it on.
2. Press the `Windows` + `P` key combination.
3. Click on any one of the options from the menu to select **PC screen only**, **Duplicate**, **Extend** or **Second screen only**.
4. You can also click **Connect to a wireless display** at the bottom of the **Project** screen and follow the steps to connect to any wireless enabled display.

*Figure C - 1*

**Project**
Configuring an External Display In Windows

The System > Display Control Panel in Settings may also be used to configure displays.

1. Attach your external display to the appropriate port, and turn it on.
2. Click the Start Menu and click Settings > System (or right-click the desktop and select Display Settings).
3. Click the Multiple Displays menu and select Duplicate these displays, Extend these displays or Show only on 1/2.
4. Click Keep changes to save any changes made.
HDMI Audio Configuration

HDMI (High-Definition Multimedia Interface) carries both audio and video signals. In some cases it will be necessary to go to the Sound control panel and manually configure the HDMI audio output as per the instructions below.

1. Go to the Sound control panel.
2. Click Playback (tab)
3. The playback device will be selected.
4. You may need to select the audio device and click Set Default (button).
5. Double-click the device to access the control panel tabs.

Volume Adjustment
The sound volume level can be clicking using the volume control icon in the notification area of the taskbar.

Figure C - 3
Sound - HDMI Device (set Default)
6. Adjust the HDMI settings from the control panel tabs.
7. Click OK to close the Sound control panel.

Figure C - 4
HDMI Device Properties
Video Driver Controls

HDMI Notes
- Connect a device with HDMI support to the HDMI-Out port BEFORE attempting to play audio/video sources through the device.
- To play audio sources through your external display’s (TV or LCD) speakers you will need to go to the audio configuration control panel on the display and configure the audio input accordingly (see your display device manual).

HDMI Video Configuration
1. Connect an HDMI cable from the HDMI-Out port to your external display.
2. Configure your external display as per the instructions in “Attaching Other Displays” on page C - 21.
3. Set up your external display (TV or LCD) for HDMI input (see your display device manual).
4. You can now play video/audio sources through your external display.

Other Applications
If you are using a third party application to play DVDs etc. from any attached DVD device, you will need to consult the application’s documentation to see the appropriate audio configuration (the application must support digital to analog translation).
Wireless Display Configuration

1. Note that no driver or application is required for wireless display in Windows 10.
2. Press the + P key combination.
3. Click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

4. The system will then search for compatible display devices (this may take up to 60 seconds so allow time for this to complete).
5. Double-click any detected display device in the list.
6. You may then need to input a pin number for the device to which you are connecting and click Next.
7. The display will then connect (for specific settings for your display see the documentation supplied with your compatible adapter/display for full details).
8. Go to the Project menu and click Disconnect to temporarily disconnect from the wireless display.
9. To permanently disconnect from the display (you will need to go back through the connection process again) you can select it in Devices and click Remove Device > Yes.
Intel® HD/UHD Graphics Control Panel

Advanced video configuration options are provided by the Intel® HD/UHD Control Panel. To access the control panel see below and overleaf:

1. Right-click the Desktop and select Intel(R) Graphics Settings from the menu.

```
Figure C - 6
Right-Click Desktop
(Intel Graphics Settings)
```

OR

2. Click the icon in the notification area of the Desktop taskbar and select Intel(R) Graphics Settings from the menu.

```
Figure C - 7
Taskbar Notification Area Icon Menu
```
OR
3. Double-click the Intel(R) HD/UHD Graphics control panel in the Windows Control Panel.
You may make changes to any of the graphics properties by clicking the appropriate menu panel and adjusting the settings from the menus.

Figure C - 9
Intel® HD/UHD Graphics Control Panel
Display
Click either **General Settings** or **Color Settings** to make display adjustments, including configuration for any attached external displays.

*Figure C - 10*
Intel® HD/UHD Graphics Control Panel - Display
Click the **Display** menu at the top of the screen to display the sub-menus. The **Multiple Displays** menu allows you to configure the display mode of any attached displays (see “Attaching Other Displays” on page C - 21). Click **Apply** to save any changes made.

**Multiple Display**

At least one other display must be attached in order to view multiple display selection options.

**Audio Settings**

Any attached active displays must have audio capacity to allow audio configuration.

*Figure C - 11*

Intel® HD/UHD Graphics Control Panel

Display - Multiple Displays
The **Custom Resolutions** sub-menu allows you to adjust the display (or any attached display) to any width, height, refresh rate, color depth and underscan percentage of your choice. Note that incorrect settings can cause system instability and even possible component damage, so this is adjusted at your own risk.
3D
This menu allows you to choose how 3D images are displayed. **Performance** gives the smoothest motion of images, **Quality** displays the most detail, **Balanced Mode** provides better computer performance with good quality and **Custom** allows you to configure the **Anisotropic Filtering** and **Vertical Sync** and features to your preferences. Click **Apply** to save changes.

*Figure C - 13*
Intel® HD/UHD Graphics Control Panel 3D
Options and Support

Hot Key Manager in Options and Support allows you to create hot keys for opening the application and scaling etc. Click Apply to save changes.
Click the **Options** menu at the top of the screen to display the sub-menus. The **Information Center** provides details on **System Information**, the **Built-In Display** and any **attached displays**.

Go to the **Preferences** sub-menu in Options to configure the preferences for the Intel® HD/UHD Graphics Control Panel. Make sure you click **Enable** under **Tray Icon** to display the Intel® HD/UHD Graphics Control Panel icon in the notification area of the taskbar (as below).

**Figure C - 15**

*Intel® HD/UHD Graphics Control Panel Options - Information Center*
Video
The Video menu allows you to brighten or darken movies, or to switch to vivid colors. The Preview image will display a sample image using the current settings. You can Save Profile and name the Profile to recall the settings at any time. Click Apply to save changes (select Color Enhancement or Image Enhancement from the menu).
Click the Video menu at the top of the screen to display the sub-menus. The Image Enhancement menu allows you to adjust the Sharpness, Skin Tone Enhancement, Noise Reduction, Contrast Enhancement and Film Mode Detection. Click Apply to save changes.

Figure C - 17
Intel® HD/UHD Graphics Control Panel - Video (Image Enhancement Basic)
Display Devices & Options

Note that you can use external displays connected to the HDMI-Out port and/or external monitor port and Mini Display (1.2) port (or Thunderbolt port if applicable). See your display device manual to see which formats are supported.

Table C - 1
Display Modes

4K2K Videos on 4K2K External Displays
Note you may experience some video lag when playing 4K2K videos on an attached 4K2K external display.

Attaching Displays
When you first attach an external display you may find that the desktop does not occupy the full screen area. Use either the display’s auto adjust/configure controls, or the Intel(R) HD Graphics Control Panel to configure the full screen display.
Attaching Other Displays

To Clone Displays:
1. Attach your external display to the appropriate port, and turn it on.
2. Go to the Intel(R) HD Graphics Control Panel control panel and click Display > Multiple Displays (sub-menu).
3. Click Clone from the Select Display Mode menu.
4. Click Apply, and OK to confirm the settings change.
5. Select the displays from the Select One or More Active Displays menu.

Multiple Display
At least one other display must be attached in order to view Multiple Display selection options.

Figure C - 18
Display > Multiple Displays (Clone)
To Enable Extended Mode:
1. Attach your external display to the appropriate port, and turn it on.
2. Go to the Intel(R) HD Graphics Control Panel control panel and click Display > Multiple Displays (sub-menu).
3. Click Extended from the Select Display Mode menu.
4. Click Apply, and OK to confirm the settings change.

Display Settings
Extended Desktop
You can have different Colors, Screen Area and Monitor Refresh Rates for each display device provided your monitor can support them.
You can drag the monitor icons to match the physical layout of your displays. Icons and programs may also be dragged between the displays.

Figure C - 19
Display > Multiple Displays (Extended)

Click the appropriate monitor icon and drag it to match the physical arrangement you wish to use (e.g. the secondary display may be extended left/right/above/below the primary display).
To Enable Collage Mode:
1. Attach your external display to the appropriate port, and turn it on.
2. Go to the Intel(R) HD Graphics Control Panel control panel and click Display > Multiple Displays (sub-menu).
3. Click Collage from the Select Multiple Display Mode menu.
4. Click Enable Collage and click On.
5. Click Vertical or Horizontal to arrange and displays as required.
6. Click Apply, and OK to confirm the settings change.

Collage Mode
Collage mode is used to combine a number of displays into a single unified higher resolution for larger screen sizes.

Figure C - 20

Video Driver Controls
Appendix D: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer's release schedule. Check with your distributor/supplier for details.

Note that this computer model series may support a range of CPUs and/or video adapters.

To find out which CPU is installed on your system go to the Start menu and select Settings, and then select System and click About. This will also provide information on the amount of Installed RAM etc.

To get information on your system’s video adapter go to the Start menu and select Settings, and then select System and click Display> Advanced display settings > Display adapter properties.

Appendix E: Docking Station Guide

Overview
The docking station provides your computer with an easy connectable desktop environment when portability is not required. This allows for easy connections to external displays, USB devices (with a full range of extra USB ports), audio devices and provides a battery charging facility.

Compatibility
Note that this docking station is compatible with particular computer models with the appropriate docking connector only. Attempting to dock the computer to an incompatible docking system will result in an error message (in this case immediately separate the computer from the docking station). Please contact your distributor/supplier for full details.
Computer and Docking Station

The computer may **hot** or **cold** dock/undock with the docking station, i.e. the computer may be powered on (hot docking/undocking) or powered off (cold docking/undocking) when docking or undocking. However if you intend to hot dock/undock the system then make sure that the **hot key driver**, provided on the computer’s *Device Drivers & Utilities + User’s Manual* disc, is installed.

Docked System Power

The system power for a docked unit should be provided only by the docking station’s AC/DC adapter plugged in to the DC-In jack at the rear of the docking station (**make sure the computer’s AC/DC adapter is not used at any time when the computer is docked**). Follow the instructions on the next pages to safely dock and undock your computer with the docking station.

2. Powered USB 3.0 Port
3. USB 3.0 Ports

USB Port Power

Note that power to the notebook computer and docking station’s USB ports may be enabled/disabled in the notebook computer’s BIOS settings (see the BIOS guide in Chapter 5 of the notebook’s user manual).
Cold Docking the Computer to the Docking Station

1. Remove all packing materials and place the docking station on a stable surface.
2. Securely attach any peripherals you want to use with the docking station (e.g. keyboard and mouse) to their ports.
3. Attach the AC/DC adapter to the DC-In jack at the rear of the docking station, and then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
4. The power button LED on the docking station will be orange.

![Docking Station with AC/DC Adapter Plugged](Figure E - 4)
5. Make sure the computer’s hot key driver is installed (especially if you intend to hot dock the system).
6. Remove the AC/DC adapter from the notebook computer and then close the computer’s lid/LCD and turn it over (if you are using the optional 9 cell battery make sure you remove the battery before attempting to dock the computer with the docking station).
7. Slide the notebook computer’s docking port cover latch in the direction of the arrow at point 2 to open the cover (failure to open the cover of the docking port before connecting the computer to the docking station may result in irreparable damage to the connector on the docking station).

**Docking Station Guide**

**Docking Port Cover**

Make sure you keep the cover closed when the computer is not docked in the station. This will help prevent foreign objects and/or dust getting in to the contact area.

*Figure E - 5 - Opening the Docking Port*
8. Make sure that the notebook computer's AC/DC adapter is NOT ATTACHED to the computer's DC-In jack and that the computer is OFF.
9. Ensure that the lock switch on the docking station is in the unlock position.
10. Press the computer down onto the docking station so that the docking connectors line up.
11. Slide the lock switch on the docking station in to the lock position.
12. Press the power button on the docking station (or power button on the notebook) to turn it on.
13. The Power LED on the docking station will be green and you can then use the docking station ports.

Moving the Docking Station

Note that if the notebook is docked with the docking station, do not attempt to move the docked unit in order to avoid losing connection. If you wish to move the docking station, then make sure you undock the notebook from the docking station before doing so.

AC/DC Adapter

Use only the docking station's AC/DC adapter plugged-in to the docking station's DC-In jack to power the computer.
Cold Undocking the Computer from the Docking Station

1. Shut the computer down as per the normal Windows shutdown (select Shut Down from the Start menu in Windows) procedure (the Power LED on the docking station will be orange).
2. Slide the lock switch 1 on the docking station in to the unlock position.
3. Lift the eject latch 2 fully in the direction indicated to unlock the docking station, while carefully holding the notebook computer with one hand.
4. You can then lift the notebook computer off the docking station.
5. After disconnecting the computer from the docking station, slide the docking port cover latch in the direction of the arrow 3.

Figure E - 7 - Slide the Switch to Unlock & Lift the Eject Latch
Hot Docking the Computer to the Docking Station

1. Remove all packing materials and place the docking station on a stable surface.
2. Securely attach any peripherals you want to use with the docking station (e.g., keyboard and mouse) to their ports.
3. Attach the AC/DC adapter to the DC-In jack at the rear of the docking station, and then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
4. The power button LED on the docking station will be orange.

![Docking Station with AC/DC Adapter Plugged](image)
Docking Station Guide

5. Make sure the computer’s Control Panel AP driver is installed for hot docking/undocking the system.
6. The computer should be on, however remove the AC/DC adapter from the notebook computer and then close the computer’s lid/LCD and turn it over (if you are using the optional 9 cell battery you cannot hot dock the computer with the docking station).
7. Slide the notebook computer’s docking port cover latch in the direction of the arrow at point 2 to open the cover (failure to open the cover of the docking port before connecting the computer to the docking station may result in irreparable damage to the connector on the docking station).

Figure E - 9 - Opening the Docking Port

Docking Port Cover
Make sure you keep the cover closed when the computer is not docked in the station. This will help prevent foreign objects and/or dust getting in to the contact area.

E - 12 Hot Docking the Computer to the Docking Station
8. Ensure that the lock switch on the docking station is in the **unlock position**.
9. Press the computer down onto the docking station so that the docking connectors line up (the **Power LED on the docking station** will be **orange**).
10. Slide the lock switch on the docking station in to the lock position **3**.
11. The **Power LED on the docking station** will be **green** and you can then use the docking station ports.

---

**Moving the Docking Station**

Note that if the notebook is docked with the docking station, do not attempt to move the docked unit in order to avoid losing connection. If you wish to move the docking station, then make sure you undock the notebook from the docking station before doing so.

**AC/DC Adapter**

Use only the docking station's AC/DC adapter plugged-in to the docking station's DC-In jack to power the computer.
Docking Station Guide

Hot Undocking the Computer from the Docking Station

Hot undocking using Windows:
1. When the system is docked click the icon in the taskbar notification area and click Safely Remove Hardware and Eject Media (Figure E - 11) from the menu.
2. Select Eject Docking Station and the Undock Complete message will appear in the notification area of the taskbar (the docking power LED will be Orange at this point and the ports, buttons and attached devices on the docking station will not work).
3. Follow steps 2 to 5 of the cold undocking procedure on page E - 10 to complete the undocking process.

Battery Condition
Note that if you attempt to hot undock the system when the battery level is low (default below 10%) you will receive an error message. In this case shut the system down to cold undock the notebook from the docking station, or let the battery charge sufficiently until it is no longer classed at a low level.

Figure E - 11 - Using the Windows System to Hot Undock the Computer
Power Button Configuration

To prevent your computer from entering a power-saving state if you choose to work with the lid/LCD closed, then it may be necessary to redefine what the computer is set to do if the lid/LCD is closed when plugged in.

1. Go to the click Power Options (Hardware and Sound) control panel.
2. Click Choose what closing the lid does (in the left pane).
3. Set the When I close the lid: option when the computer is plugged in to Do nothing.
4. Click Save Changes and close the control panel.

**Figure E - 12 - Power Options (Choose what closing the lid does)**

Hot Docking/Hot Undocking & Power Saving Modes

If the computer is in a power-saving state (Sleep or Hibernate), or is resuming from a power saving state, do not attempt to hot dock or hot undock the system.
Docking Station Guide

Docking Station Ports & Jacks

The following will give a quick description of the interface (ports & jacks) which allow your docking station and computer to communicate with external devices, connect to the internet etc. When the notebook is docked to the docking station all the ports on the docking station will function, however only some of the ports on the notebook will function (see the note alongside each item for specific information.

<td>Plug an external microphone in to this jack to record on your computer.</td>
<td></td>
</tr>
<tr>
<td>RJ-45 LAN Jack</td>
<td>This port supports LAN (Network) functions. <strong>Note:</strong> Broadband (e.g. ADSL) modems usually connect to the LAN port.</td>
<td>Note that when the system is docked the notebook’s LAN Jack can no longer be used and you must use the docking station’s LAN jack as the network jack only.</td>
</tr>
</tbody>
</table>

## Wake On LAN Support

Note that when the system is docked Wake On LAN will be disabled. Wake On LAN is only supported in AC Mode (i.e. when the computer is powered by its AC/DC adapter and not by the battery). When the system is docked, the power for a docked unit should be provided only by the docking station’s AC/DC adapter plugged in to the DC-In jack at the rear of the docking station (and not the computer’s AC/DC adapter), and therefore Wake On LAN is not supported by a docked system.
## Docking Station Guide

### Item | Description | Note
---|---|---
Security Lock Slot | To prevent possible theft, a Kensington-type lock can be attached to this slot. Locks can be purchased at any computer store. | 
S/PDIF-Out Jack | This S/PDIF ([Sony/Philips Digital Interface Format](https://en.wikipedia.org/wiki/Sony/Philips_Digital_Interface_Format)) Out Port allows you to connect your DVD-capable PC to a Dolby AC-3 compatible receiver for “5.1” or ‘dts’ surround sound. | 

### Docking Station - S/PDIF Out Jack

Note that the docking station’s S/PDIF Out Jack does not support optical fibre cables, and when the computer is docked to the docking station you must use the docking station’s S/PDIF Out Jack for any S/PDIF connections.
**Docking Station Guide**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB 2.0/1.1 Ports*</td>
<td>These USB 2.0 compatible ports (USB 2.0 is fully USB 1.1 compliant) are for low-speed peripherals such as keyboards, mice or scanners, and for high-speed peripherals such as external HDDs, digital video cameras or high-speed scanners etc. Devices can be plugged into the computer, and unplugged from the computer, without the need to turn the system off (if the power rating of your USB device is 500mA or above, make sure you use the power supply which comes with the device). <strong>The USB 3.0 ports are denoted by their blue color; USB 2.0 ports are colored black.</strong> USB 3.0 will transfer data much faster than USB 2.0, and is backwards-compatible with USB 2.0. <strong>Note:</strong> The powered USB 3.0 port function is designed to help charge USB compliant devices, but is not designed to allow their operation.</td>
<td>You can use the ports on both the computer and the docking station when the system is docked. <strong>Note:</strong> The powered USB 3.0 port (see Figure E - 3 on page E - 6) will supply power when the docking station is powered by the AC/DC adapter plugged into a working outlet, (this may not work with certain devices). The notebook does not need to be docked for this to function. There is no LED to indicate a charge status on the docking station.</td>
</tr>
<tr>
<td>USB 3.0 Ports</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

---

**E - 20 Docking Station Ports & Jacks**
Multiple Displays

Any two of the following displays may be enabled simultaneously when the system is docked. You can toggle through the display options by using the **Fn + F7** key combination (make sure any attached displays are powered on).

1. The notebook’s LCD panel
2. An external display attached to the notebook’s HDMI port.
3. An external display attached to the notebook’s Mini DisplayPort.
4. An external display attached to the docking station’s external monitor (VGA) port.
5. An external display attached to the docking station’s DVI-D port.
6. An external display attached to the docking station’s HDMI port.

BIOS Controls - USB ports, Card Reader, Smart Card & ExpressCard

Note that power to the notebook computer’s **USB ports**, **Card Reader**, **Smart Card** and **ExpressCard** may be enabled/disabled in the notebook computer’s BIOS settings (see the BIOS guide in **Chapter 5** of the notebook’s user manual). The **USB 3.0 Power** item and **Powered USB 2.0 Port Power** settings in the BIOS will also affect the power supplied to the docking station’s 4 * USB 3.0 ports and 3 * USB ports respectively.

The notebook’s **Card Reader**, **Smart Card** and **ExpressCard** will continue to function when the system is docked as long as they are not disabled in the BIOS.
Backup Hotkey

When the system is docked you can press the Backup Hotkey (Figure E - 13) to launch the Windows Recovery (see overleaf) application. If you do not have a hard disk installed in the docking station you can set the Windows File History application to backup to any attached hard disk, CD/DVD or non system partition of your computer.

Docking Station - HDD Support

The docking station’s SATA port only supports HDDs with a SATAII (or lower) interface.

Figure E - 13 - Front View (HDD Backup Hotkey)
1. Press the hard disk backup **hotkey**.
2. This will run the Windows **Recovery** control panel.
3. You can then choose to backup individual files and folders or alternatively create a System Image Backup (see your Windows documentation for details).
